*COVID-19 and Climate Change in BRICS Nations* Ndivhuho Tshikovi,Andréa Santos,Xiaolong Zou,Fulufhelo Netswera,Irina Zotovna Yarygina,Sriram Divi,2023-12-12 This book provides a quantitative and qualitative overview of the overall impact that the COVID-19 pandemic had on Brazil, Russia, India, China, and South Africa's (BRICS countries) capacity to re-shape global climate governance and explore areas for mutual cooperation. BRICS countries account for nearly 40% of the total world population and are thus intrinsic to the global efforts and results for Agenda 2030, the Sustainable Development Goals, the Paris Agreement and beyond. The outbreak of the COVID-19 pandemic does not at first appear to be directly related to BRICS' policies to address climate change, but it has influenced the pace and nature of climate action due to the loss of human and financial capital. This book examines this correlation and raises awareness of the COVID-19 pandemic's impacts and potential solutions on BRICS' climate strategies. Drawing on case studies from each country, the authors use examples from urban governance, energy transitions strategy, foreign investment and more to illustrate

how COVID-19 has negatively or positively impacted climate data and draw wider conclusions about the long-term climate policies that may be implemented. This volume will be of great interest to students and scholars of climate change, environmental politics and governance and global development studies.

**China in Space** Brian Harvey, 2013-03-27 Rockets were invented in China, the home of many modern inventions, including ancient astronomy, and were used originally for military purposes in the 13th century. The Chinese space program was founded in October 1956 by the father of Chinese rocketry, Tsien Hsue Shen, who lived in California in the 1930s until his expulsion as a Chinese spy. In recent times there have been three manned spaceflights, highlighting China's ambitious space program and generating worldwide interest. Future missions are planned, including a mission to go to Mars. The explosive growth of China's innovative and rapidly developing space program in recent years has made it a hot topic in international space policy. This follow up to Harvey's earlier book, *China's Space Program - From Conception To Manned Spaceflight* (2004) bring us up to date with everything that is happening in the Chinese space program today and looks at its ambitious future. The author briefly summarizes how this program evolved from medieval times, and uncovers the truth behind the bland, unreliable, and generally uninformative news releases issued around each space mission. It also examines the key features of the program, previously unknown to the outside world.

Code Charles Petzold, 2022-08-02 The classic guide to how computers work, updated with new chapters and interactive graphics For me, Code was a revelation. It was the first book about programming that spoke to me. It started with a story, and it built up, layer by layer, analogy by analogy, until I understood not just the Code, but the System. Code is a book that is as much about Systems Thinking and abstractions as it is about code and programming. Code teaches us how many unseen layers there are between the computer systems that we as users look at every day and the magical silicon rocks that we infused with lightning and taught to think. - Scott Hanselman, Partner Program Director, Microsoft, and host of Hanselminutes Computers are everywhere, most obviously in our laptops and smartphones, but also our cars, televisions, microwave ovens, alarm clocks, robot vacuum cleaners, and other smart appliances. Have you ever wondered what goes on inside these devices to make our lives easier but occasionally more infuriating? For more than 20 years, readers have delighted in Charles Petzold's illuminating story of the secret inner life of computers, and now he has revised it for this new age of computing. Cleverly illustrated and easy to understand, this is the book that cracks the mystery. You'll discover what flashlights, black cats, seesaws, and the ride of Paul Revere can teach you about computing, and how human ingenuity and our compulsion to communicate have shaped every electronic device we use. This new expanded edition explores more deeply the bit-by-bit and gate-by-gate construction of the heart of every smart device, the central processing unit that combines the simplest of basic operations to perform the most complex of feats. Petzold's companion website, [CodeHiddenLanguage.com](http://CodeHiddenLanguage.com), uses animated graphics of key

circuits in the book to make computers even easier to comprehend. In addition to substantially revised and updated content, new chapters include: Chapter 18: Let's Build a Clock! Chapter 21: The Arithmetic Logic Unit Chapter 22: Registers and Busses Chapter 23: CPU Control Signals Chapter 24: Jumps, Loops, and Calls Chapter 28: The World Brain From the simple ticking of clocks to the worldwide hum of the internet, Code reveals the essence of the digital revolution.
