*The Eminent Monk* John Kieschnick,1997-07-01 In an attempt to reconstruct an elusive aspect of the medieval Chinese imagination, The Eminent Monk examines biographies of Chinese Buddhist monks, from the uncompromising ascetic to the unfathomable wonder-worker. While analyzing images of the monk in medieval China, the author addresses some questions encountered along the way: What are we to make of accounts in "eminent monk" collections of deviant monks who violate monastic precepts? Who wrote biographies of monks and who read them? How did different segments of Chinese society contend for the image of the monk and which image prevailed? By placing biographies of monks in the context of Chinese political and religious rhetoric, The Eminent Monk explores both the role of Buddhist literature in Chinese history and the monastic imagination that inspired this literature.

**An Annotated Bibliography of Chinese Painting Catalogues and Related Texts** Hin-cheung Lovell,1973-01-01 The student of Chinese painting must from time to time consult John C. Ferguson's Li-tai chu-lu hua mu, an index to Chinese paintings recorded in Chinese catalogues. The catalogues in which the paintings are compiled are of equal interest: their compilers, the date of their compilation, their scope, their derivation, their merits and shortcomings, and so on. An Annotated Bibliography of Chinese Painting Catalogues and Related Texts provides a way for English-language students with limited knowledge of Chinese to find basic information on the catalogues in an easily available form.

*Advanced Oxidation Processes for Water Treatment* Mihaela I. Stefan,2017-09-15 Advanced Oxidation Processes (AOPs) rely on the efficient generation of reactive radical species and are increasingly attractive options for water remediation from a wide variety of organic micropollutants of human health and/or environmental concern. Advanced Oxidation Processes for Water Treatment covers the key advanced oxidation processes developed for chemical contaminant destruction in polluted water sources, some of which have been implemented successfully at water treatment plants around the world. The book is structured in two sections; the first part is dedicated to the most relevant AOPs, whereas the topics covered in the second section include the photochemistry of chemical contaminants in the aquatic environment, advanced water treatment for water reuse, implementation of advanced treatment processes for drinking water production at a state-of-the art water treatment plant in Europe, advanced treatment of municipal and industrial wastewater, and green technologies for water remediation. The advanced oxidation processes discussed in the book cover the following aspects: - Process principles including the most recent scientific findings and interpretation. - Classes of compounds suitable to AOP treatment and examples of reaction mechanisms. - Chemical and photochemical degradation kinetics and modelling. - Water quality impact on process performance and practical considerations on process parameter selection criteria. - Process limitations and byproduct formation and strategies to mitigate any potential adverse effects on the treated water quality. - AOP equipment design and economics considerations. - Research studies and outcomes. - Case studies relevant to process implementation to water treatment. - Commercial applications. -

Future research needs. *Advanced Oxidation Processes for Water Treatment* presents the most recent scientific and technological achievements in process understanding and implementation, and addresses to anyone interested in water remediation, including water industry professionals, consulting engineers, regulators, academics, students. *Revolution Plus Love* Liu Jianmei, 2003-09-30 In the aftermath of the May Fourth movement, a growing expectation of revolution raised important intellectual issues about the position of the individual within a society in turmoil and the shifting boundaries of political and sexual identities. The theme of revolution plus love, a literary response to the widespread insurrections and upheaval, was first popularized in the late 1920s. In her examination of this popular but understudied literary formula, Liu Jianmei argues that revolution and love are culturally variable entities, their interplay a complex and constantly changing literary practice that is socially and historically determined. Liu looks at the formulary writing of revolution plus love from the 1930s to the 1970s as a case study of literary politics. Favored by leftist writers during the early period of revolutionary literature, it continued to influence mainstream Chinese literature up to the 1970s. By drawing a historical picture of the articulation and rearticulation of this theme, Liu shows how changes in revolutionary discourse force unpredictable representations of gender rules and power relations, and how women's bodies reveal the complex interactions between political representation and gender roles. *Revolution Plus Love* is a nuanced and carefully considered work on gender and modernity in China, unmatched in its broad use of literary resources. It will be of considerable interest to scholars and students of modern Chinese literature, women's studies, cultural studies, and comparative literature.

Eco-Architecture VII S. Syngellakis, 2019-01-29 Comprises a collection of papers presented at the 7th International Conference on Harmonisation between Architecture and Nature, this volume reviews the challenges and new opportunities of contemporary architecture. These papers cover the results of advances in design and new building technologies, as well as the development of new materials. Many of the changes are motivated by a drive towards eco-architecture, trying to harmonise architectural products with nature. Another important issue is the adaptation of the architectural design to the natural environment, learning from nature and traditional construction techniques. Never before in history have architects and engineers had such a range of new processes and products open to them. In spite of that, the construction industry lags behind all others in taking advantage of a wide variety of new technologies. This is understandable, due to the inherent complexity and uniqueness of each architectural project. Advances in computer and information systems, including robotics, offers the possibility of developing new architectural forms, construction products and building technologies which are just now starting to emerge. Changes have also taken place in the way modern society works and lives, due to the impact of modern technologies. Patterns of work have been disrupted and changed, affecting transportation and the home environment. The demand is for a new type of habitat that can respond to the changes and the consequent requirements in terms of urban environment. The papers contained in this book deal with topics such as building technologies, design by passive systems, design with nature, cultural sensitivity, life cycle assessment, resources and rehabilitation and many others including case studies from many different places around the world. They will be of interest to architects, engineers, planners, physical scientists, sociologists and economists.

**Linguistic Engineering** Ji Fengyuan, 2003-11-30 When Mao and the Chinese Communist Party won power in 1949, they were determined to create new, revolutionary human beings. Their most precise instrument of ideological transformation was a massive program of linguistic engineering. They taught everyone a new political vocabulary, gave old words new meanings, converted traditional

terms to revolutionary purposes, suppressed words that expressed incorrect thought, and required the whole population to recite slogans, stock phrases, and scripts that gave correct linguistic form to correct thought. They assumed that constant repetition would cause the revolutionary formulae to penetrate people's minds, engendering revolutionary beliefs and values. In an introductory chapter, Dr. Ji assesses the potential of linguistic engineering by examining research on the relationship between language and thought. In subsequent chapters, she traces the origins of linguistic engineering in China, describes its development during the early years of communist rule, then explores in detail the unprecedented manipulation of language during the Cultural Revolution of 1966–1976. Along the way, she analyzes the forms of linguistic engineering associated with land reform, class struggle, personal relationships, the Great Leap Forward, Mao-worship, Red Guard activism, revolutionary violence, Public Criticism Meetings, the model revolutionary operas, and foreign language teaching. She also reinterprets Mao's strategy during the early stages of the Cultural Revolution, showing how he manipulated exegetical principles and contexts of judgment to frame his alleged opponents. The work concludes with an assessment of the successes and failures of linguistic engineering and an account of how the Chinese Communist Party relaxed its control of language after Mao's death.

**Salt and State** Cecilia Chien, 2020-08-06 Salt and State is an annotated translation of a treatise on salt from Song China. From its inception in the Han dynasty (206 B.C.–220 A.D.), the salt monopoly was a key component in the Chinese government's financial toolkit. Salt, with its highly localized and large-scale production, was an ideal target for bureaucratic management. In the Song dynasty (960–1279), fiscal pressures on the government had intensified with increased centralization and bureaucratization. A bloated administration and an enormous standing army maintained against incursions by aggressive steppe neighbors placed tremendous strain on Song finances. Developing the salt monopoly seemed a logical and indeed urgent strategy, but each actor in this plan—the emperor, local officials, monopoly administrators, producers, merchants, and consumers—had his own interests to protect and advance. Thus attempts to maximize the effectiveness of the monopoly meant frequent policy swings and led to levels of corruption that would ultimately undo the Song. Unlike other contemporary sources, the Songshi treatise organizes its subject into an intelligible and detailed narrative, elucidating special terminology, the bureaucracy and its processes, and debates relating to Chinese finance and politics, as well as the salt industry itself. Professor Chien's extensive annotation relies on parallel histories that corroborate and supplement the Songshi account, together providing a comprehensive study of this important institution in China's premodern political economy.

*Inside Solid State Drives (SSDs)* Rino Micheloni, Alessia Marelli, Kam Eshghi, 2012-10-15 Solid State Drives (SSDs) are gaining momentum in enterprise and client applications, replacing Hard Disk Drives (HDDs) by offering higher performance and lower power. In the enterprise, developers of data center server and storage systems have seen CPU performance growing exponentially for the past two decades, while HDD performance has improved linearly for the same period. Additionally, multi-core CPU designs and virtualization have increased randomness of storage I/Os. These trends have shifted performance bottlenecks to enterprise storage systems. Business critical applications such as online transaction processing, financial data processing and database mining are increasingly limited by storage performance. In client applications, small mobile platforms are leaving little room for batteries while demanding long life out of them. Therefore, reducing both idle and active power consumption has become critical. Additionally, client storage systems are in need of significant performance improvement as well as supporting small robust form factors. Ultimately, client systems are optimizing for best performance/power ratio as well as performance/cost ratio. SSDs promise to address both enterprise and client storage

requirements by drastically improving performance while at the same time reducing power. Inside Solid State Drives walks the reader through all the main topics related to SSDs: from NAND Flash to memory controller (hardware and software), from I/O interfaces (PCIe/SAS/SATA) to reliability, from error correction codes (BCH and LDPC) to encryption, from Flash signal processing to hybrid storage. We hope you enjoy this tour inside Solid State Drives.

**History of Forensic Medicine** Burkhard Madea, 2017-01-01 Forensic Medicine is an old medical discipline defined as “that science, which teaches the application of every branch of medical knowledge to the purpose of the law” (Alfred Swaine Taylor). Forensic Medicine deals with medical evidence not only in practice but also in research and furthermore all legal essentials in health care especially for doctors are part of teaching, training and research. Several steps in the development of Forensic Medicine can be distinguished: At first the use of medical knowledge for legal and public purposes. Secondly the compulsory medical testimony for the guidance of judges. Thirdly the professionalization as an own academic discipline. The development and existence of a speciality of Forensic Medicine depends essentially on two factors: on a sufficiently high development of the law and on a sufficiently high development of medicine. The period of professionalization of Forensic Medicine as an own academic discipline started in the 19th century, especially in Paris, Vienna, London, Edinburgh, Berlin. Since then the world has changed dramatically and we are now witnesses of a rapid, deep-rooted social cultural, legal and technological transformation. Already 40 years ago Professor Bernhard Knight wrote in a survey on legal medicine in Europe: “In all aspects of life, the exchange of information on an international level can do nothing but good and legal medicine is no exception.” This book on the History of Forensic Medicine is an approach in this direction. Forensic Medicine has a long and rich tradition since medical expertise has to face legal questions and new questions and developments raised by the society. The aim of this book is to address the state of Forensic Medicine in different countries worldwide. With contributions from Europe, China, Japan, the United States and the United Arab Emirates.

**The Han** Agnieszka Joniak-Luthi, 2015-06-24 This ethnography explores contemporary narratives of “Han-ness,” revealing the nuances of what Han identity means today in relation to that of the fifty-five officially recognized minority ethnic groups in China, as well as in relation to home place identities and the country’s national identity. Based on research she conducted among native and migrant Han in Shanghai and Beijing, Aqsu (in Xinjiang), and the Sichuan-Yunnan border area, Agnieszka Joniak-Luthi uncovers and discusses these identity topographies. Bringing into focus the Han majority, which has long acted as an unexamined backdrop to ethnic minorities, Joniak-Luthi contributes to the emerging field of critical Han studies as she considers how the Han describe themselves - particularly what unites and divides them - as well as the functions of Han identity and the processes through which it is maintained and reproduced. The Han will appeal to scholars and students of contemporary China, anthropology, and ethnic and cultural studies.

**The Sacred Village** Thomas DuBois, 2005-01-31 Until recently, few villagers of rural North China ventured far from their homes. Their intensely local view of the world included knowledge of the immanent sacred realm, which derived from stories of divine revelations, cures, and miracles that circulated among neighboring villages. These stories gave direction to private devotion and served as a source of expert information on who the powerful deities were and what role they played in the human world. The structure of local society also shaped public devotion, as different groups expressed their economic and social concerns in organized worship. While some of these groups remained structurally intact in the face of historical change, others have changed dramatically, resulting in new patterns of religious organization and practice. The Sacred Village introduces local religious life in Cang County, Hebei Province, as a lens through which to view the larger issue of how rural Chinese perspectives and behaviors were shaped by the sweeping social, political, and demographic changes of the last two centuries. Thomas DuBois combines new archival sources in Chinese and Japanese with his own fieldwork to produce a work that is compelling and intimate in detail. This dual approach also allows him to address the integration of external networks into local society and religious mentality and posit local society as a particular sphere in which the two are negotiated and transformed.

The Poetry of Du Fu Stephen Owen, 2015-11-13 The Complete Poetry of Du Fu presents a complete scholarly translation of Chinese literature alongside the original text in a critical edition. The English translation is more scholarly than vernacular Chinese translations, and it is compelled to address problems that even the best traditional commentaries overlook. The main body of the text is a facing page translation and critical edition of the earliest Song editions and other sources. For convenience the translations are arranged following the sequence in Qiu Zhao'an's Du shi xiangzhu (although Qiu's text is not followed). Basic footnotes are included when the translation needs clarification or supplement. Endnotes provide sources, textual notes, and a limited discussion of problem passages. A supplement references commonly used allusions, their sources, and where they can be found in the translation. Scholars know that there is scarcely a Du Fu poem whose interpretation is uncontested. The scholar may use this as a baseline to agree or disagree. Other readers can feel confident that this is a credible reading of the text within the tradition. A reader with a basic understanding of the language of Chinese poetry can use this to facilitate reading Du Fu, which can present problems for even the most learned reader.

*Astrology and Cosmology in Early China* David W. Pankenier, 2013-10-10 The ancient Chinese were profoundly influenced by the Sun, Moon and stars, making persistent efforts to mirror astral phenomena in shaping their civilization. In this pioneering text, David W. Pankenier introduces readers to a seriously understudied field, illustrating how astronomy shaped the culture of China from the very beginning and how it influenced areas as disparate as art, architecture, calendrical science, myth, technology, and political and military decision-making. As elsewhere in the ancient world, there was no positive distinction between astronomy and astrology in ancient China, and so astrology, or more precisely, astral omenology, is a principal focus of the book. Drawing on a broad range of sources, including archaeological discoveries, classical texts, inscriptions and paleography, this thought-provoking book documents the role of astronomical phenomena in the development of the 'Celestial Empire' from the late Neolithic through the late imperial period.
