**More Plutos** Sue Kientz, 2015-05-04 Astronomers may have demoted Pluto, but astrologers know better. Pluto is powerful and essential to their work. But few appreciate that there are MORE PLUTOS in the Kuiper Belt, more important bodies astrologers and others interested in the craft should be using in chart work. Author Sue Kientz addresses her primer on the new Dwarf Planets to astrological professionals or anyone studying astrology in depth. General readers may nevertheless enjoy learning which celebrities have connections to these massive bodies, since those examples as well as famous disasters (9-11, Challenger explosion, JFK assassination) and achievements (light-bulb invention, Moon landing) are presented in engaging detail. Kientz analyzes Eris, Makemake, Haumea, Sedna, Quaoar, Orcus, Varuna, Ixion, and others, while revealing why Secondary Progression works and how astrology delivered convincing results even before modern planets were discovered. Planetary patterns are demonstrated to have fractal structure, suggesting astrology has a promising underlying scientific basis. Sue Kientz (B.A., Theater, Adelphi University; M.A., English, University of New Orleans) first became interested in astrology in 1977 when she decided to conduct a long-term study of zodiac signs to investigate literary symbolism. Originally skeptical that astrology could have any value, after learning how to calculate charts, she was intrigued by the results. Kientz always included the large asteroids in her chart work, but after working with new Kuiper-Belt discoveries Eris, Makemake, Haumea, Sedna, and others, she realized they provided the finishing touches astrology needs to deliver its unique view of people and events in a simple, straightforward manner. The Pluto System After New Horizons is the benchmark research compendium for synthesizing our understanding of the Pluto system. This volume reviews the work of researchers who have spent the last five years assimilating the data returned from New Horizons and the first full scientific synthesis of this fascinating system.

**Primary Directions** Sepharial, 2006-05-01 The definitive text on Primary Directions, written by a 20th century master. Sepharial (1864-1929) was one of the leading astrologers in the early 20th century English astrological revival. Primaries were his favorite means of forecasting. Primaries, unlike simple transits or secondary directions, are not immediately obvious to the average student. So in this book, the author starts with the basic definitions. He then explains how to calculate directions in mundo, directions in the zodiac, as well as parallel directions. He suggests methods of organization and describes what effects primary directions may produce. In the process he gives an overview of the three main schools of forecasting: The Fatalists, the Casuists, and the Idealists, and gives the pros and cons of each. Sepharial then discusses the two major individuals behind primaries. These are Claudius Ptolemy, who invented the semi-arc (primary) method in the second century AD, and the 17th century Italian monk, Placidus de Titis, who devised the complex house system that enabled primaries to be calculated easily and rapidly. Sepharial next tackles directions under Poles, which were a favorite of R.C. Smith, the first of several men known as Raphael. Then, the resolution of problems unique to Primaries: The proper method to calculate the Part of Fortune (Oblique Ascension/ Descension, rather than simple zodiacal longitudes), various unique challenges with primary directions and the moon, and the true way to calculate directions to house

cusps, along with some novel shortcuts. This book, originally entitled Directional Astrology, was the revised and expanded successor to the author's earlier Prognostic Astrology. It is also superior to his better known Primary Directions Made Easy. Using this system, Sepharial made many notable forecasts, most famously that of the end of World War I and the abdication of the Kaiser. Interest in this fascinating system has increased since the mid-1990's. This is the finest book ever published on the subject, one that will repay study.

**Sacred Places of Goddess** Karen Tate, 2005-11-01 Uncovering the past through the lens of sacred travel, this travel book includes both academic and popular religious perspectives, and is filled with photographs of both famous and lesser-known locales from every corner of the world. Each site-specific explanation of the significance of Goddess today and in centuries past deftly combines current trends, academic theories, and historical insights. From the Middle East, to Europe, Africa, and the Americas, the images of feminine divinity presented in this work are as uniform in their beauty as they are diverse in cultural tradition. For each location-be it the shrines in Kyoto and Kamakura or the sites worshipping the Virgin Mary in Bolivia, France, Trinidad, and the Saut D'Eau Waterfalls of Haiti-this book provides a history of each site in conjunction with the photography.

**The Kumulipo** Martha Warren Beckwith, 2000-07-01 The Kumulipo is the sacred creation chant of a family of Hawaiian alii, or ruling chiefs. Composed and transmitted entirely in the oral tradition, its 2000 lines provide an extended genealogy proving the family's divine origin and tracing the family history from the beginning of the world.

**Comets II** Michel C. Festou, H. Uwe Keller, Harold A. Weaver, 2004-11-01 The study of comets is a field that has seen tremendous advances in recent years, far surpassing the knowledge reflected in the original Comets volume published as part of the Space Science Series in 1982. This new volume, with more than seventy contributing authors, represents the first complete overview of comet science in more than a decade and contains the most extensive collection of knowledge yet assembled in the field. Comets II situates comet science in the global context of astrophysics for the first time by beginning with a series of chapters that describe the connection between stars and planets. It continues with a presentation of the formation and evolution of planetary systems, enabling the reader to clearly see the key role played in our own solar system by the icy planetesimals that were the seeds of the giant planets and transneptunian objects. The book presents the key results obtained during the 1990s, in particular those collected during the apparition of the exceptional comets C/Hyakutake and C/Hale-Bopp in 1996-1997. The latest results obtained from the in situ exploration of comets P/Borrelly and P/Wild 2 are also discussed in detail. Each topic is designed to be accessible to students or young researchers looking for basic, yet detailed, complete and accurate, information on comet science. With its emphasis on the origin of theories and the future of research, Comets II will enable scientists to make connections across disciplinary boundaries and will set the stage for discovery and new understanding in the coming years.

Brady's Book of Fixed Stars Bernadette Brady, 1999-09-01 For the first time, this book offers astrologers: Paran Maps and Star Phases for over 60 stars; new insights into the natal use of fixed stars, as well as their use in mundane astrology; extensive appendices of Heliacal Rising and Acronychal Setting graphs and tables so that, for any given location, the dates of these risings and settings can be found; a list of 176 stars with their 21st century Ptolemaic precessed positions versus their commonly-considered positions based on Ulugh Beg's methods.

**An A to Z of Almost Everything** Trevor Montague, 2003 In this new edition, the original topics have been brought up to date, added to and elaborated upon: Abbreviations, for example, now includes an essential array of chat room acronyms: Fashion boasts a complete list of British Hairdressers of the Year; and Music features a comprehensive listing of every top-ten single in the last forty years. And there are a wealth of new subjects to be discovered and enjoyed too, from the Top Tens of 2002 to world coins and paper money, bingo calls to crime and punishment, the Mr Men books to the works of Charles Dickens. What can be Big Boy, Early Girl or Supersonic? Which British Prime Minister links John Lennon and Gary Lineker? Which classic novel begins 'Now, what I want is facts'? (See Reviews for Answers) This monumental work of reference is a must-have title on your bookshelf - both an enjoyable book to dip into and a cornucopia of sheer fact.

*Dynamics of Small Solar System Bodies and Exoplanets* Jean J. Souchay, Rudolf Dvorak, 2010-03-10 This book on recent investigations of the dynamics of celestial bodies in the solar and extra-Solar System is based on the elaborated lecture notes of a thematic school on the topic, held as a result of cooperation between the SYRTE Department of Paris Observatory and the section of astronomy of the Vienna University. Each chapter corresponds to a lecture of several hours given by its author(s). The book therefore represents a necessary and very precious document for teachers, students, and researchers in the field. The first two chapters by A. Lemaître and H. Skokos deal with standard topics of celestial mechanics: the first one explains the basic principles of resonances in mechanics and their studies in the case of the Solar System. The differences between the various cases of resonance (mean motion, secular, etc. ) are emphasized together with resonant effects on celestial bodies moving around the Sun. The second one deals with approximative methods of describing chaos. These methods, some of them being classical, as the Lyapounov exponents, other ones being developed in the very recent past, are explained in full detail. The second one explains the basic principles of resonances in mechanics and their studies in the case of the Solar System. The differences between the various cases of resonance (mean motion, secular, etc. ) are emphasized together with resonant effects on celestial bodies moving around the Sun. The following three chapters by A. Cellino, by P. Robutel and J.

**Detours** Hokulani K. Aikau, Vernadette Vicuña Gonzalez, 2019-11-08 Many people first encounter Hawai'i through the imagination—a postcard picture of hula girls, lu'aus, and plenty of sun, surf, and sea. While Hawai'i is indeed beautiful, Native Hawaiians struggle with the problems brought about by colonialism, military occupation, tourism, food insecurity, high costs of living, and climate change. In this brilliant reinvention of the travel guide, artists, activists, and scholars redirect readers from the fantasy of Hawai'i as a tropical paradise and tourist destination toward a multilayered and holistic engagement with Hawai'i's culture and complex history. The essays, stories, artworks, maps, and tour itineraries in *Detours* create decolonial narratives in ways that will forever change how readers think about and move throughout Hawai'i. Contributors.
