More Plutos Sue Kientz, 2015-05-04 Astronomers may have demoted Pluto, but astrologers know better. Pluto is powerful and essential to their work. But few appreciate that there are MORE PLUTOS in the Kuiper Belt, more important bodies astrologers and others interested in the craft should be using in chart work. Author Sue Kientz addresses her primer on the new Dwarf Planets to astrological professionals or anyone studying astrology in depth. General readers may nevertheless enjoy learning which celebrities have connections to these massive bodies, since those examples as well as famous disasters (9-11, Challenger explosion, JFK assassination) and achievements (light-bulb invention, Moon landing) are presented in engaging detail. Kientz analyzes Eris, Makemake, Haumea, Sedna, Quaoar, Orcus, Varuna, Ixion, and others, while revealing why Secondary Progression works and how astrology delivered convincing results even before modern planets were discovered. Planetary patterns are demonstrated to have fractal structure, suggesting astrology has a promising underlying scientific basis. Sue Kientz (B.A., Theater, Adelphi University; M.A., English, University of New Orleans) first became interested in astrology in 1977 when she decided to conduct a long-term study of zodiac signs to investigate literary symbolism. Originally skeptical that astrology could have any value, after learning how to calculate charts, she was intrigued by the results. Kientz always included the large asteroids in her chart work, but after working with new Kuiper-Belt discoveries Eris, Makemake, Haumea, Sedna, and others, she realized they provided the finishing touches astrology needs to deliver its unique view of people and events in a simple, straightforward manner. Primary Directions Sepharial, 2006-05-01 The definitive text on Primary Directions, written by a 20th century master. Sepharial

(1864-1929) was one of the leading astrologers in the early 20th century English astrological revival. Primaries were his favorite means of forecasting. Primaries, unlike simple transits or secondary directions, are not immediately obvious to the average student. So in this book, the author starts with the basic definitions. He then explains how to calculate directions in mundo, directions in the zodiac, as well as parallel directions. He suggests methods of organization and describes what effects primary directions may produce. In the process he gives an overview of the three main schools of forecasting: The Fatalists, the Casuists, and the Idealists, and gives the pros and cons of each. Sepharial then discusses the two major individuals behind primaries. These are Claudius Ptolemy, who invented the semi-arc (primary) method in the second century AD, and the 17th century Italian monk, Placidus de Titis, who devised the complex house system that enabled primaries to be calculated easily and rapidly. Sepharial next tackles directions under Poles, which were a favorite of R.C. Smith, the first of several men known as Raphael. Then, the resolution of problems unique to Primaries: The proper method to calculate the Part of Fortune (Oblique Ascension/ Descension, rather than simple zodiacal longitudes), various unique challenges with primary directions and the moon, and the true way to calculate directions to house cusps, along with some novel shortcuts. This book, originally entitled Directional Astrology, was the revised and expanded successor to the author's earlier Prognostic Astrology. It is also superior to his better known Primary Directions Made Easy. Using this system, Sepharial made many notable forecasts, most famously that of the end of World War I and the abdication of the Kaiser. Interest in this fascinating system has increased since the mid-1990's. This is the finest book ever published on the subject, one that will repay study.

An Anthology of Informal Latin, 200 BC-AD 900 J. N. Adams, 2016-09-26 This book contains over fifty passages of Latin from 200 BC to AD 900, each with translation and linguistic commentary. It is not intended as an elementary reader (though suitable for university courses), but as an illustrative history of Latin covering more than a millennium, with almost every century represented. Conventional histories cite constructions out of context, whereas this work gives a sense of the period, genre, stylistic aims and idiosyncrasies of specific passages. 'Informal' texts, particularly if they portray talk, reflect linguistic variety and change better than texts adhering to classicising norms. Some of the texts are recent discoveries or little known. Writing tablets are well represented, as are literary and technical texts down to the early medieval period, when striking changes appear. The commentaries identify innovations, discontinuities and phenomena of long duration. Readers will learn much about the diversity and development of Latin.

The Pluto System After New Horizons S. Alan Stern,2021-08-10 Once perceived as distant, cold, dark, and seemingly unknowable, Pluto had long been marked as the farthest and most unreachable frontier for solar system exploration. The Pluto System After New Horizons is the benchmark research compendium for synthesizing our understanding of the Pluto system. This volume reviews the work of researchers who have spent the last five years assimilating the data returned from New Horizons and the first full scientific synthesis of this fascinating system.

Slaves and Masters in the Ancient Novel Stelios Panayotakis,Michael Paschalis,2020-02-26 The present volume contains revised versions of most of the papers that were delivered at RICAN 7, which was held in Rethymnon, Crete, on 27-28 May 2013. The focus of the conference was on the portrayal and function of male and female slaves and their masters/mistresses in the ancient novel and related texts; the complex relationship between these social categories raises questions about slavery and freedom, gender and identity, stability of the self and social mobility, social control and social death. The papers offer a wide and rich range of perspectives: enslavement of elite women in Chariton's Callirhoe and Stoic ideas of moral slavery in Dio Chrysostom (Hilton); reversal of social status and techniques of (self-)characterization in Chariton (De Temmerman); the interaction between implicit and explicit narratives of slavery in Chariton and its effect on the readers of the novel (Owens); the narratological, structural and symbolic centrality of slavery in Xenophon's Ephesiaka (Trzaskoma); the socio-historical dimensions of slavery and the prominent discourse on despotism in Iamblichus' Babyloniaka (Dowden); the balance between historical accuracy and fiction in the representation of slavery in Achilles Tatius (Billault); animals, human slaves and elite masters, and the presence of Rome in Longus' Daphnis and Chloe (Bowie); the distribution of slaves on the geographical, cultural and moral maps drawn in Heliodorus' Aithiopika (Montiglio); slave women and their relationships to their mistresses as positive and negative paradigms of love in Heliodorus' Aithiopika (Morgan and Repath); the freedman's world as a self-perpetuating and closed universe in Petronius' Satyrice (Bodel); beauty, slavery and the destabilization of societal norms and authority figures in Petronius' Satyrice (Panayotakis); the interaction between Roman comedy and elegy in the representation of the relationship of Lucius and Photis in Apuleius' Metamorphoses (May); a comparative analysis of the semantics and function of slavery-related terms in pseudo-Lucian's Onos and Apuleius' Metamorphoses (Paschalis); enslaved and free storytelling in the Life of Aesop and the history and evolution of the ancient fable tradition (Lefkowitz).

The Rosicrucians Hargrave Jennings,2011-05-19 Jennings' history joins the nineteenth-century debates that sought to determine the relationships between modern science, religion, and the supernatural.

The Theosophical Glossary Helena Petrovna Blavatsky, 1892

Babylonian Horoscopes Francesca Rochberg, 1998 Emerging for the first time in the 5th cent. B.C., horoscopes reflect the application of the idea and practice of celestial divination to the life of the individual. Whereas an omen focuses on a single astronomical phenomenon, the horoscope takes into account the positions of the moon, sun, and five planets at the moment of a birth. As such, Babylonian horoscopes presuppose the concept of the ecliptic and a methodology for obtaining the positions of heavenly bodies when they are not observable. This is the first complete edition of the extant cuneiform horoscopes -- with transcription and philological and astronomical commentary. This study offers a systematic description of the documents as a definable class of Babylonian astronomical/astrological texts.
