Go Green Get Lean Kate Geagan, 2009-03-17 Over the past 20 years America has been steadily marching toward a diet that is more drenched in fossil fuel than any key nutrient. Experts estimate that it now takes roughly 7 to 10 calories of fossil fuel energy to bring one calorie of food energy to the American plate. Not only have our eating habits turned us into an increasingly overweight society, but the alarming truth is that our food choices are having as much of an impact on the planet as the cars we drive. *Go Green Get Lean* is the perfect eating plan for our time. Revealing easy-to-follow steps anyone can take to eat for a healthy body and planet—and drop up to 9 pounds in the first 2 weeks—Kate Geagan helps readers see the questionable value of convenience foods, and explains why going green doesn't require a drastic vegan overhaul. Because there are many nutritional benefits to be drawn from some non-plant-based food choices, she points readers to the best selections, including occasional splurges they can enjoy in good conscience. In learning to make truly LEAN choices, Kate offers the following straightforward formula: Before eating food, ask yourself: Local or global? What was the Energy used to bring it to my plate? (Include processing, packaging, transportation, and temperature of food.) Animal or plant? (Plant foods are greener.) Is this Necessary? (Is this food critical to my health and weight goals?) This trailblazing work—the first to offer a specific weight-loss plan along with the promise of a lowered carbon footprint—makes it possible for readers to help the environment and their waistlines at the same time.

Dietary Behavior and Physical Activity in Children and Adolescents Antje Hebestreit, Leonie-Helen Bogl, 2019-12-05 In recent years, diet- and lifestyle-related disorders have become a major health threat in Europe and worldwide. The contributions in this monograph include 2 review articles and 19 original contributions from several countries that provide new information on the existing research elucidating important aspects of children’s and adolescents’ nutrition and lifestyle behavior. The data included in this Special Issue are from large epidemiological studies, including several multicenter and multinational studies, as well as datasets from surveillance initiatives. The topics of interest of this Special Issue include the co-occurrence of multiple health behaviors in children, the role of parenting and early feeding practices, dairy consumption in childhood, validity of dietary intake data, dietary supplement use in children, as well as socioeconomic disparities and eating culture. The diverse articles in this Special Issue highlight the complexity and extent to which nutrition and physical activity behaviors may influence different health aspects of children and adolescents. As seen by the various findings and recommendations, not only is more work in this area required but the translation of this work to practice and policy is imperative if we are to address the challenges impacting the nutrition, physical activity, and health of young populations.
