*McAfee 2018 Software: Learning the Essentials* Mark Dascano, 2018-12-04 McAfee antivirus is a popular software in the industry that is used in the prevention and removal of viruses, bots and worms on a computer or smart device. It is used to scan the device to see if anything abnormal or compromising is found and will remove it, so it does not harm the user. It is normally packaged with other software and is usually not found as a standalone software. There are different versions of the software that will serve the home and office users or the larger corporate client. The software can work for computers, phones or tablets so it can keep all your digital devices free from any viruses. This book will review many of the features of the software and what it can offer to the end user when it is operational.

**The Myths of Security** John Viega, 2009-06-16 If you think computer security has improved in recent years, *The Myths of Security* will shake you out of your complacency. Longtime security professional John Viega, formerly Chief Security Architect at McAfee, reports on the sorry state of the industry, and offers concrete suggestions for professionals and individuals confronting the issue. Why is security so bad? With many more people online than just a few years ago, there are more attackers -- and they're truly motivated. Attacks are sophisticated, subtle, and harder to detect than ever. But, as Viega notes, few people take the time to understand the situation and protect themselves accordingly. This book tells you: Why it's easier for bad guys to own your computer than you think Why anti-virus software doesn't work well -- and one simple way to fix it Whether Apple OS X is more secure than Windows What Windows needs to do better How to make strong authentication pervasive Why patch management is so bad Whether there's anything you can do about identity theft Five easy steps for fixing application security, and more Provocative, insightful, and always controversial, *The Myths of Security* not only addresses IT professionals who deal with security issues, but also speaks to Mac and PC users who spend time online.
