Excess Outfitting Materials in Ship Construction Navy (SCN) Shipbuilding Programs: an Analysis of the Initial Allowance Development Process Richard H. Feierabend,1987 This thesis investigates the accumulation of excess outfitting material during a ship's initial supply support development process. The SCN allowance development process is discussed in general. The Integrated Stock Number Sequence Listing (ISNSL), the primary supporting subsystem for Ship Construction Navy (SCN) shipbuilding program allowance development, is reviewed. Analyses of ISNSL statistics from FFG-7 and SSBN-726 Class shipbuilding programs are conducted. The affects of configuration changes and adjustments to item management information, particularly the Best Replacement Factor (BRF) on excess outfitting materials is reviewed. SQL Server T-SQL Recipes David Dye,Jason Brimhall,Timothy Roberts,Wayne Sheffield,Joseph Sack,Jonathan Gennick,2015-07-17 SQL Server T-SQL Recipes is an example-based guide to the Transact-SQL language that is at the core of SQL Server. This edition has been lightly updated for SQL Server 2014 and provides ready-to-implement solutions to common programming and database administration tasks. Learn to create databases, create in-memory tables and stored procedures, insert and update data, generate reports, secure your data, and more. Tasks and their solutions are broken down into a problem/solution format that is quick and easy to read so that you can get the job done fast when the pressure is on. Solutions in this book are divided into chapters by problem domain. Each chapter is a collection of solutions around a single facet of the language such as writing queries, managing indexes, error handling, and query performance. Each solution is presented code-first, giving you a working code example to copy from and implement immediately in your own environment. Following each example is an in-depth description of how and why the given solution works. Tradeoffs and alternative approaches are also discussed. Focused on solutions: Look up what you need to do. Learn how to do it. Do it. Current: Lightly updated for SQL Server 2014 Comprehensive: Covers all common T-SQL problem domains

Robotic Industrialization Thomas Bock,Thomas Linner,2015-08-10 In this volume, concepts, technologies and developments in the field of building-component manufacturing - based on concrete, brick, wood and steel as building materials and on large-scale prefabrication, delivering complex, customized components and products - are introduced and discussed. Robotic industrialization refers to the transformation of parts and low-level components into higher-level components, modules and finally building systems

by highly mechanized, automated, or robot-supported industrial settings in structured off-site environments. Components and modules are open building systems (in modular building product structures) that are delivered by suppliers to original equipment manufacturers such as, for example, large-scale prefabrication companies or automated/robotic on-site factories. In particular, innovative large-scale prefabrication companies have altered the building structures, manufacturing processes, and organizational structures significantly to be able to assemble in their factories high-level components and modules from Tier-1 suppliers into customized buildings by heavily utilizing robotic technology in combination with automated logistics and production lines.
