Modeling of a logistics network for wood flows from by-products and cascade utilization Mohammad Sadegh Taskhiri, 2016-05-27 Waste Wood and wood by-products have the potential to become attractive alternative sources of raw materials. Their efficient use is important due to the rising demand and limited supply of forest wood. Cascade utilization is gaining interest as a strategy to bridge the gap between rising wood demand and fresh wood availability. However, the economic and environmental impacts of a cascading system for wood-based products are not fully known. In this work, an investigation is conducted to determine the consequences of cascade utilization for the economic and environmental performance of logistics networks for wood flows. Two case studies in Lower Saxony consider five wood products, including medium density fiber (MDF), oriented strand board (OSB), particleboard, coated paper, and wood pellets. In the first case study, an approach for decision support is developed that consists of a mixed-integer linear programming (MILP) model. In the first case study, the MILP model is used for minimizing the costs of the logistics network for three scenarios. Then the UMBERTO software is applied to determine the quantity of CO₂e of the minimized logistics network. In the second case study, the MILP model is enhanced using two objective functions, as cost and global warming potential (GWP) are considered simultaneously. In this case study, it is observed that environmental parameters such as CO₂ emissions can also be implemented in the MILP. The utilization of a multi-objective optimization model brings new perspectives (the trade-off between two contradictory objective functions, for instance) in comparison to the first case study, in which CO₂ is calculated as an off-line step after logistics costs are

minimized. Altholz und Holz-Nebenprodukte besitzen das Potenzial, attraktive, alternative Rohstoffquellen zu werden. Ihre effiziente Nutzung ist von hoher Relevanz, da die Nachfrage nach Holz steigt und die Versorgung mit Holz aus Wäldern begrenzt ist. Um die Lücke zwischen der wachsenden Holznachfrage und -verfügbarkeit zu überbrücken, ist die Kaskadennutzung eine Strategie, welche zunehmendes Interesse erfährt. Allerdings sind die wirtschaftlichen und ökologischen Auswirkungen eines Kaskadensystems für Holzprodukte nicht vollständig bekannt. In dieser Arbeit wird eine Untersuchung durchgeführt, um die Folgen der Kaskadennutzung auf die Wirtschafts- und Umweltleistung von Logistiknetzwerken für Holzströme zu bestimmen. Im Rahmen von zwei Fallstudien in Niedersachsen werden fünf Holzprodukte, einschließlich mitteldichten Fasern (MDF), OSB-Platten (OSB), Spanplatten, beschichtetem Papier und Holz-Pellets betrachtet. In der ersten Fallstudie wird ein Ansatz zur Entscheidungsunterstützung entwickelt, der aus einem Mixed-Integer Linear Programming (MILP)-Modell besteht. Das MILP-Modell wird zuerst in drei verschiedenen Szenarien zur Minimierung der Logistikkosten angewendet. Mithilfe der UMBERTO-Software wird anschließend die Menge von CO₂e bestimmt. In der zweiten Fallstudie wird das Modell für zwei Zielfunktionen weiterentwickelt und eingesetzt, bei denen die Kosten und das Treibhausgaspotenzial gleichzeitig betrachtet werden. Diese Fallstudie zeigt, dass auch Umweltparameter wie CO₂-Emissionen mit MILP umgesetzt werden können. Die Verwendung eines Mehrzieloptimierungsmodells ermöglicht die Betrachtung neuer Perspektiven (zum Beispiel den Trade-off zwischen zwei widersprüchlichen Zielfunktionen) im Vergleich zur ersten Fallstudie, in welcher CO₂-Emissionen in einem Offline-Schritt nach der Minimierung der Logistikkosten minimiert

werden.

Trophic Regulation of the Basal Ganglia K. Fuxe, L. F. Agnati, B. Bjelke, 2013-10-22
Trophic Regulation of the Basal Ganglia: Focus on Dopamine Neurons examines neurotransmitters. The book first discusses the role of fibroblast growth factor-2 (FGF-2) and ganglioside GM1 and the trophic regulation of the basal ganglia. Biochemical and histochemical studies on the cellular localization of FGF-2; mapping of FGF-2 and its receptors in the basal ganglia postnatally and adulthood; and mapping of the ganglioside GM1 distribution in the basal ganglia are presented. The text also explains glucocorticoid and estrogen effects on the nigrostriatal and mesolimbic dopaminergic systems; factors associated to dopaminergic cell death in Parkinson's disease; and compensatory mechanisms at dopamine D-2 receptors. The book also describes the effects of brain-derived neurotrophic factor on injured dopaminergic neurons; role of gangliosides and trophic factors in brain repair; and features of the trophic action of polyamines. The text also underscores the presence of interleukin-1 in the central nervous system; neuropeptides synthesis in astrocytes; and astrocytic kynurenines as modulators of dopaminergic function in the rat basal ganglia. The selection is a good source of information for readers wanting to study neurotransmitters.

Rock Deformation from Field, Experiments and Theory D.R. Faulkner, E. Mariani, J. Mecklenburgh, 2015-10-26
Ernie Rutter has made, and continues to make, a significant impact in the field of rock deformation. He has studied brittle and plastic deformation processes that occur within both the oceanic and continental crust, as well as other key

properties such as the permeability and seismic velocities of these rocks. His approach has been one that integrates field observations, laboratory experiments and theoretical analyses. This volume celebrates Ernie's key contribution to rock deformation and structural geology by bringing together a collection of papers that represent this broad approach. The papers within the volume address key issues that remain within these fields. These range from fundamental studies of brittle and plastic behaviour along with the resultant structures and microstructures from both the field and laboratory, to applied problems where a better understanding of the deformation and properties of the crust is still needed.

Tools in Fluvial Geomorphology G. Mathias Kondolf, Hervé Piégay, 2016-06-13 Fluvial Geomorphology studies the biophysical processes acting in rivers, and the sediment patterns and landforms resulting from them. It is a discipline of synthesis, with roots in geology, geography, and river engineering, and with strong interactions with allied fields such as ecology, engineering and landscape architecture. This book comprehensively reviews tools used in fluvial geomorphology, at a level suitable to guide the selection of research methods for a given question. Presenting an integrated approach to the interdisciplinary nature of the subject, it provides guidance for researchers and professionals on the tools available to answer questions on river restoration and management. Thoroughly updated since the first edition in 2003 by experts in their subfields, the book presents state-of-the-art tools that have revolutionized fluvial geomorphology in recent decades, such as physical and numerical modelling, remote sensing and GIS, new field techniques, advances in dating, tracking and sourcing, statistical

approaches as well as more traditional methods such as the systems framework, stratigraphic analysis, form and flow characterisation and historical analysis. This book: Covers five main types of geomorphological questions and their associated tools: historical framework; spatial framework; chemical, physical and biological methods; analysis of processes and forms; and future understanding framework. Provides guidance on advantages and limitations of different tools for different applications, data sources, equipment and supplies needed, and case studies illustrating their application in an integrated perspective. It is an essential resource for researchers and professional geomorphologists, hydrologists, geologists, engineers, planners, and ecologists concerned with river management, conservation and restoration. It is a useful supplementary textbook for upper level undergraduate and graduate courses in Geography, Geology, Environmental Science, Civil and Environmental Engineering, and interdisciplinary courses in river management and restoration.

Mental Health at the Crossroads Janet E. Williams, 2017-03-02 This book is a challenge to the enduring status and domination of bio-medical approaches in mental health services. Contributors from four continents argue that this domination, along with modernization and multidisciplinary work, will not improve people's lives unless social and psychological perspectives are appreciated and integrated. This implies new forms of relationships and social arrangements. *Mental Health at the Crossroads: the Promise of the Psychosocial Approach* is a timely analysis of the psychosocial approach as it resonates across the discipline divide, considering the past and future development. It is written from the perspectives of service users and carers, managers, practitioners, educators, researchers and policy makers, illustrated with case studies from Australia, Brazil, Italy, UK and the USA. This book presents an alternative approach to conventional thinking in mental health, providing a fascinating and valuable resource for those seeking new perspectives, grounded in theory with practice examples, in order to influence the current agenda and change practice.
