The Flight of the Mind Thomas C. Caramagno,2023-11-10 In this major new book on Virginia Woolf, Caramagno contends psychobiography has much to gain from a closer engagement with science. Literary studies of Woolf's life have been written almost exclusively from a psychoanalytic perspective. They portray Woolf as a victim of the Freudian family romance, reducing her art to a neurotic evasion of a traumatic childhood. But current knowledge about manic-depressive illness—its genetic transmission, its biochemistry, and its effect on brain function—reveals a new relationship between Woolf's art and her illness. Caramagno demonstrates how Woolf used her illness intelligently and creatively in her theories of fiction, of mental functioning, and of self structure. Her novels dramatize her struggle to imagine and master psychic fragmentation. They helped her restore form and value to her own sense of self and lead her readers to an enriched appreciation of the complexity of human consciousness.

Politics and Popular Opinion in East Germany, 1945-68 Mark Allinson,2000 An innovative, interdisciplinary, incisive scholarly study remapping and redefining domains and dynamics of modernism, EccentriCities: Writing in the margins of modernism critically considers how geo-historically distant and disparate urban sites, concentrating Russian and Luso-Brazilian cultural dialogue and definition, give rise to peculiarly parallel anachronistic and alternative fictional forms. While comparatively reframing these literary traditions through an extensive survey of Russian and Brazilian literature, cartography, urban design and development, foregrounding innovative close readings of works by Gogol, Dostoevsky, Bely, Almeida, Machado de Assis, Lima Barreto, Mário de Andrade, the book also redefines new constellations (eccentric, concentric, ex-centric) for understanding geo-cultural and generic dimensions of modernist and post-modern literature and theory.

The Reuven Ramaty High Energy Solar Spectroscopic Imager (RHESSI) - Mission Description and Early Results R.P. Lin,B.R. Dennis,Arnold O. Benz,2003-03-31 The Reuven Ramaty High Energy Solar Spectroscopic Imager (RHESSI) satellite was launched on 5 February 2002. Its objective is to study the energy release and particle acceleration in solar flares through observations of X-rays and gamma rays. Two novel technologies are combined to obtain both spectra and images over a broad energy range. For the spectroscopy, cooled hyperpure germanium detectors are used to cover the energy range from 3 keV to 17 MeV with unprecedented keV-class resolution. Since focusing optics are not possible for making images with such high energy photons, tungsten and molybdenum absorbing grids are used to modulate the X-rays and gamma-rays coming from the Sun as the spacecraft rotates. This allows the spatial Fourier components of the source to be determined so that images can be made in spectral ranges where astronomical images have never been produced before. These new instrumental techniques require equally innovative software to reconstruct X-ray and gamma-ray spectra and images from the observations. Ample solar activity, abundant observations, and an open data policy have attracted many researchers. Astronomers face in the RHESSI mission an exciting new scientific potential. It has unusually broad possibilities for improving our understanding of the enigmatic solar flare phenomenon that is becoming increasingly important as society depends more and more on space-based technologies. In this volume, the functioning of RHESSI is explained, the data analysis techniques including spectroscopy and image reconstruction are introduced, and the experiences of the first few months of operation are summarized. First scientific results are presented that provide the essential base for more extended studies using RHESSI data and complementary observations by instruments on other spacecraft and at ground-based solar observatories. Scientists and students will find here the latest discoveries in solar flare research, as well as inspiration for future work. The papers will serve as references for the many new discoveries to come from the continuing RHESSI observations.

Related technologies such as XML and XSLT are also covered, along with integrating Visual C++ code with Visual Basic and C# code.

Guide to the Geology of Mount Desert Island and Acadia National Park Duane Braun,Ruth Braun,2016-06-28 This richly-illustrated, full-color guide to the geology of Mount Desert Island, Maine, the home of Acadia National Park, makes the spectacular scenery and rich geological history accessible to outdoor explorers, geology enthusiasts, and armchair travelers alike. The Guide grounds readers in basic geologic concepts before chronicling the unique history of the area from 550 million years ago to the present. Including information-packed self-guided trips with stops at 31 points of interest, this book is lavishly illustrated with 100 full color photos, maps, and illustrations that enhance appreciation of this national treasure. Duane and Ruth Braun relate the fascinating story of the region's formation, explaining how a slice of South America with Mount Desert Island bordering its southern side landed on the edge of North America to form Maine. Another piece of South America collided with this landing, causing Mount Desert Island to erupt violently in a ten mile wide volcanic caldera. The Island then underwent a long period of stream erosion culminating in a period of glacial erosion to form the present landscape. The exceptional scenery that resulted has attracted visitors from around the world. This book unlocks the many secrets of the formations, offering a deeper understanding of the land and its origins.

Changing Places Caitlin Murdock, 2010-06-10 Changing Places is an interesting meditation on the varying identities and rights claimed by residents of borderlands, the limits placed on the capacities of nation-states to police their borders and enforce national identities, and the persistence of such contact zones in the past and present. It is an extremely well-written and engaging study, and an absolute pleasure to read. ---Dennis Sweeney, University of Alberta Changing Places offers a brilliantly transnational approach to its subject, the kind that historians perennially demand of themselves but almost never accomplish in practice. ---Pieter M. Judson, Swarthmore College Changing Places is a transnational history of the birth, life, and death of a modern borderland and of frontier peoples' changing relationships to nations, states, and territorial belonging. The cross-border region between Germany and Habsburg Austria---and after 1918 between Germany and Czechoslovakia---became an international showcase for modern state building, nationalist agitation, and local pragmatism after World War I, in the 1930s, and again after 1945. Caitlin Murdock uses wide-ranging archival and published sources from Germany and the Czech Republic to tell a truly transnational story of how state, regional, and local historical actors created, and eventually destroyed, a cross-border region. Changing Places demonstrates the persistence of national fluidity, ambiguity, and ambivalence in Germany long after unification and even under fascism. It shows how the 1938 Nazi annexation of the Czechoslovak Sudetenland became imaginable to local actors and political leaders alike. At the same time, it illustrates that the Czech-German nationalist conflict and Hitler's Anschluss are only a small part of the larger, more complex borderland story that continues to shape local identities and international politics today. Caitlin E. Murdock is Associate Professor of History at California State University, Long Beach. Jacket Credit: Cover art courtesy of the author

Class, Mass, and Collective Arbitration in National and International Law S.I. Strong, 2013-10-22 Class arbitration first developed in the United States in the 1980s as a means of providing large numbers of individuals with the opportunity to assert their claims at the same time and in the same proceeding. Large-scale arbitration has since spread beyond U.S. borders, with collective arbitration being seen in Europe and mass arbitration being used in the international investment regime. Class, Mass, and Collective Arbitration in National and International Law considers all three forms of arbitration as a matter of domestic and international law, providing arbitrators, advocates and scholars with the tools they need to evaluate these sorts of procedural mechanisms. The book covers the best-known decisions in the field - Stolt-Nielsen S.A. v. Animal Feeds International Corp. and AT&T Mobility LLC v. Concepcion from the U.S. Supreme Court and Abaclat v. Argentine Republic from the world of investment arbitration - as well as specialized rules promulgated by the American Arbitration Association, JAMS and the German Institution of Arbitration (DIS). The text introduces dozens of previously undiscussed judicial opinions and covers issues ranging from contractual (or treaty) silence and waiver to regulatory concerns and matters of enforcement. The book discusses the entire timeline of class, mass and collective arbitration, ranging from the devices' historical origins through the present and into the future. Lawyers in a wide variety of jurisdictions will benefit from the material contained in this text, which is the first full-length monograph to address large-scale arbitration as a matter of national and international law.

Atlas of Percutaneous Edge-to-Edge Mitral Valve Repair Ted Feldman, Olaf Franzen, Reginald Low, Jason Rogers, Khung Keong Yeo, 2013-01-09 The field of structural heart disease interventions is experiencing a stage of rapid growth with the development of percutaneous mitral valve repair therapies and percutaneous aortic valve replacement therapies. The MitraClip represents a new therapeutic frontier for mitral regurgitation and is expected to revolutionize repair of the mitral valve. For the first time in the world, physicians now have the capability to repair the mitral valve percutaneously without the need for a sternotomy or cardiopulmonary bypass. However, as with all new endeavors, there is a steep learning curve, not just for the individual operator but also for the entire field. The MitraClip technology and technique is technically complex and is guided by echocardiography and fluoroscopy. It is an imaging intensive procedure that requires deep 3-dimensional understanding of normal and abnormal cardiac anatomy. Not all mitral regurgitation cases are suitable and not all cases are straightforward. It is therefore crucially important for physicians in this specialty to communicate their experience, successes, failures and complications with each other. Written by the leaders in this breakthrough field, the Atlas of Percutaneous Edge-to-Edge Mitral Valve Repair is the first of its kind for the new percutaneous MitraClip procedure. The Editors have designed the book to be a comprehensive reference manual and to provide cardiologists with true examples of basic and complex cases of percutaneous mitral valve repair using the technology. In addition, this book provides step-by-step guides to the procedure and complications as well as steps to recover from them are discussed. The Atlas is anticipated to be a very valuable reference for both novice and experienced interventional cardiologists and echocardiologists. As percutaneous valve repair becomes more common it will also be of great interest to general cardiologists and surgeons.

Multi-View Geometry Based Visual Perception and Control of Robotic Systems Jian Chen, Bingxi Jia, Kaixiang Zhang, 2018-06-14 This book describes visual perception and control methods for robotic systems that need to interact with the environment. Multiple view geometry is utilized to extract low-dimensional geometric information from abundant and high-dimensional image information, making it convenient to develop general solutions for robot perception and control tasks. In this book, multiple view geometry is used for geometric modeling and scaled pose estimation. Then Lyapunov methods are applied to design stabilizing control laws in the presence of model uncertainties and multiple constraints.
