Corporate Social Performance: A Stakeholder Approach Stuart Cooper, 2017-07-05 Corporate social performance has come of age. In a business environment characterized by its perpetual state of flux, the ability to recognize and react to global forces becomes paramount. The fallout of such rapid change - the fast-paced developments in communications and technology, the continual change to global markets, shifting demographics, the homogenization of personal values - have all contributed to the widespread new interest in issues such as ecology and environment, human rights and diversity, health and well-being, and communities. All of these issues are now potential liabilities for companies, and are very much back on the agenda for business. Once regarded as peripheral management concerns, they are now recognized as hard to predict and hard for business to deal with when they go wrong. This book offers an insight into how corporate social performance can be measured and why this is an important aspect of corporate social responsibility. Using detailed case studies, it provides readers with the foundations for understanding and applying corporate social performance, providing a stakeholder framework by which corporate social performance can be measured, alongside a detailed consideration of the value of different stakeholder measures. The book also applies this framework to new social accounting

standards, enabling the reader to consider the validity and appropriateness of these standards. The increasingly important role of the internet for corporate social reporting is also considered.

Handbook of Sustainability in Management Education Jorge A. Arevalo, Shelley F. Mitchell, 2017-06-30 This Handbook strives to enhance knowledge and application within sustainability in management education (SiME) across different academic programs, geographic regions and personal/professional contexts. Cross-disciplinary and boundary-spanning, this book focuses on specific themes and is therefore split into four distinct sections: one on theory and practice, one on transformational interventions in business programs, one on the role of external agents and the last on innovative approaches in SiME.

The Project Manager's MBA Dennis J. Cohen, Robert J.

Graham, 2001-07-09 Project managers are no longer judged by the technical success of their projects alone. They're also held accountable for their contributions to the company's financial goals. Yet most project managers don't have the business knowledge necessary to make project-based decisions that lead to bottom-line success. In this book, Dennis Cohen and Robert Graham, both former university professors and experienced project management consultants, provide the skills that, until now, could only be gained through a graduate degree and years of hands-on experience. Cohen and Graham walk project managers through basic business concepts such as value creation, accounting and finance, strategy, and marketing. They connect these concepts to the decisions project managers face every day. And they make it easy to apply the resulting solutions on the job through a unique business systems calculator. Readers can use the online calculator in conjunction with the book to understand how different project variables affect business outcomes, to determine the overall impact of proposed project changes, and to evaluate the economic results of many decisions they make. Cohen and Graham's

principles apply equally to projects in business, non-profit, and government organizations. And each one is illustrated through case studies drawn from a range of industries, including pharmaceuticals, the technology sector, even the winemaking business. Whether the mandate is to get new products to market, improve the infrastructure, or better serve customers and clients, this book teaches project managers how to make day-to-day decisions from an upper-management perspective. And it provides a blueprint for planning and pitching potential projects that demonstrates a higher level of business savvy.

An Approach to an Accountable Client-Communication Mix in the Banking Industry Markus Sasse, 2008-08-04 Inhaltsangabe: Introduction: The recent decades have been characterised by the development from the industrial age towards a service economy. Knowledge and information have become the most essential production factors. When

services and intangible assets are offered, information and soft factors are even more important elements of business communication. Any kind of worldwide communication between (anonymous) business partners has been enabled by the progress of information and telecommunication technology. The banking sector is one important part of a service economy. With regard to the globalisation the banking industry still faces radical changes. This paper is especially addressed to the business operations of WestLB AG (WestLB), a major German bank that primarily operates both national and international business-to-business (B2B) banking. WestLB operates in a partnership with the savings banks, which run the business-to-customer (B2C) banking of the mass market for private customers (esp. retail banking). In addition, WestLB's subsidiaries Readybank and Weberbank attend to private clients, whereas Readybank runs bulk-lending business and Weberbank offers private wealth management to German customers. In particular, this reading explores a number of relevant questions within the scope of well-managed marketing and its controlling. Latest organisational restructuring within the bank's marketing organisation have encouraged a rethink of how to better manage marketing communications to the clients and where to spend its marketing investments. One important change means that one worldwide marketing budget has been applied to the entire bank. This is the second largest departmental cost budget after information technology to be controlled at WestLB. All these present circumstances are described in detail in a separate chapter including organisational questions, marketing teams, customer and product groups. Motivation: Due to the homogeneity of the offered finance products, it is especially difficult for banks to position and distinguish themselves from the competition. Consequently, marketing success of

financial services products requires communication activities such as imaging, loyalty factor, persuasion, and so on. Traditionally, the marketing department is responsible for shaping such a competitive communication on products and image towards the company's markets within an affluent society, where the customer can choose from different [...]

Performance Dashboards and Analysis for Value Creation Jack Alexander, 2006-11-03 No matter what industry your company competes in, you need to have a firm understanding of how to create a direct link between shareholder value and critical business processes in order to improve performance and achieve long-term value. *Performance Dashboards and Analysis for Value Creation* contains the information and expertise you need to do just this—and much more.

Creating Shareholder Value Alfred Rappaport, 1999-10-13 The ultimate test of corporate strategy, the only reliable measure, is whether it creates economic value for shareholders. Now, in this substantially revised and updated edition of his 1986 business classic, *Creating Shareholder Value*, Alfred Rappaport provides managers and investors with the practical tools needed to generate superior returns. After a decade of downsizings frequently blamed on shareholder value decision making, this book presents a new and in-depth assessment of the rationale for shareholder value. Further, Rappaport presents provocative new insights on shareholder value applications to: (1) business planning, (2) performance evaluation, (3) executive compensation, (4) mergers and acquisitions, (5) interpreting stock market signals, and (6) organizational implementation. Readers will be particularly interested in Rappaport's answers to three management performance evaluation questions: (1) What is the most appropriate measure of performance? (2) What is the most appropriate target level

of performance? and (3) How should rewards be linked to performance? The recent acquisition of Duracell International by Gillette is analyzed in detail, enabling the reader to understand the critical information needed when assessing the risks and rewards of a merger from both sides of the negotiating table. The shareholder value approach presented here has been widely embraced by publicly traded as well as privately held companies worldwide. Brilliant and incisive, this is the one book that should be required reading for managers and investors who want to stay on the cutting edge of success in a highly competitive global economy.

MBA Carolina Machado, J. Paulo Davim, 2016-02-02 This book focuses on the relevant subjects in the curriculum of an MBA program. Covering many different fields within business, this book is ideal for readers who want to prepare for a Master of Business Administration degree. It provides discussions and exchanges of information on principles, strategies, models, techniques, methodologies and applications in the business area.
