Çatalhöyük Excavations Ian Hodder,2023-02-22 This volume discusses the main excavations at Neolithic Çatalhöyük East undertaken from 2009 to 2017. The site is well known because of its large size, elaborate symbolism and wall paintings, and long history of excavation. This volume covers the last period of excavation directed by Ian Hodder in the North and South Areas of the site. It also describes the work conducted in the GDN Area on the later phases of occupation. The main aim of these excavations was to understand the layout and social geography of the settlement (both houses and open areas) and to situate the elaborate art and symbolism within a secure architectural and depositional context. Excavation and conservation methods are described and the campaign of geophysical prospection is described. Considerable focus is placed on detailed dating using Bayesian modeling that alters significantly our understanding of the organization of the settlement. New light is thrown on the degree of contemporaneity of buildings and on the continuities and breaks in house occupation and in the site as a whole. A fuller understanding has also been reached of the variability of houses and burials and of how these variations relate to social differentiation. The descriptions of excavated units, features and buildings incorporates results from the analyses of animal bone, chipped stone, groundstone, shell, ceramics, phytoliths, micromorphology. The

integration of different types of data and of different voices within the excavation team mimics the process of collaborative interpretation that took place during the excavation and post-excavation process.
