Administering the School Library Media Center Betty J. Morris,2010-08-16 This is the most comprehensive textbook on school library administration available, now updated to include the latest standards and address new technologies. This reference text provides a complete instructional overview of the workings of the library media center—from the basics of administration, budgeting, facilities management, organization, selection of materials, and staffing to explanations on how to promote information literacy and the value of digital tools like blogs, wikis, and podcasting. Since the publication of the fourth edition of Administering the School Library Media Center in 2004, many changes have altered the landscape of school library administration: the implementation of NCLB legislation and the revision of AASL standards, just to mention two. The book is divided into 14 chapters, each devoted to a major topic in school library media management. This latest edition gives media specialists a roadmap for designing a school library that is functional and intellectually stimulating, while leading sources provide guidance for further research.

Toward a 21st-Century School Library Media Program Esther Rosenfeld,David V. Loertscher,2007-10-15 This collection of enlightening and stimulating articles, written by some of the most important figures in school librarianship, demonstrates how teacher-librarians, classroom teachers, and administrators can work together to create a 21st century school library media program. With topics that emphasize student success, leadership, partnerships, curriculum design, collaborative planning and teaching, literacy, 21st century skills, emerging technologies, and so much more, this compendium brings together the best of the best discussions.

Journalism in an Era of Big Data Seth C. Lewis,2018-03-08 Big data is marked by staggering growth in the collection and analysis of digital trace information regarding human and natural activity, bound up in and enabled by the rise of persistent connectivity, networked communication, smart machines, and the internet of things. In addition to their impact on technology and society, these developments have particular significance for the media industry and for journalism as a practice and a profession. These data-centric phenomena are, by some accounts, poised to greatly influence, if not transform, some of the most fundamental aspects of news and its production and distribution by humans and machines. What such changes actually mean for news, democracy, and public life, however, is far from certain. As such, there is a need for scholarly scrutiny and critique of this trend, and this volume thus explores a range of phenomena—from the use of algorithms in the newsroom, to the emergence of automated news stories—at the intersection between journalism and the social, computer, and information sciences. What are the implications of such developments for journalism's professional norms, routines, and ethics? For its organizations, institutions, and economics? For its authority and expertise? And for the epistemology that underwrites journalism's role as knowledge-producer and sense-maker in society? Altogether, this book offers a first step in understanding what big data means for journalism. This book was originally published as a special issue of Digital Journalism.

Always Already New Lisa Gitelman,2006 In Always Already New, Lisa Gitelman explores the newness of new media while she asks what it means to do media history. Using the examples of early recorded sound and digital networks, Gitelman challenges readers to think about the ways that media work as the simultaneous subjects and instruments of historical inquiry. Presenting original case studies of Edison's first phonographs and the Pentagon's first distributed digital network, the ARPANET, Gitelman points suggestively toward similarities that underlie the cultural definition of records (phonographic and not) at the end of the nineteenth century and the definition of documents (digital and not) at the end of the twentieth. As a result, Always Already Newspeaks to present concerns about the humanities as much as to the emergent field of new media studies. Records and documents are kernels of humanistic thought, after all--part of and party to the cultural impulse to preserve and interpret. Gitelman's argument suggests inventive contexts for humanities computing while also offering a new perspective on such traditional humanities disciplines as literary history. Making extensive use of archival sources, Gitelman describes the ways in which recorded sound and digitally networked text each emerged as local anomalies that were yet deeply embedded within the reigning logic of public life and public memory. In the end Gitelman turns to the World Wide Web and asks how the history of the Web is already being told, how the Web might also resist history, and how using the Web might be producing the conditions of its own historicity.

Image Databases and Multi-Media Search Arnold Smeulders,Ramesh Jain,1998-01-22 The World Wide Web and the Internet are signs that things will be very different in the future. And what is so striking about this computer-age future is that it comes incredibly fast and is incredibly overwhelming. Anyone who has surfed the Web has exclaimed at one point or another that there is so much information available, so much to search and so much to keep up with. Where Lycos and AltaVista are already accepted tools for textual information, image and multimedia search engines are the natural answers in the quest for pictorial information. This book provides a state-of-the-art description of that field. It contains the proceedings of a valuable workshop in Amsterdam, where people gathered to discuss the progress in the field. The topics cover computational methods of searching for pictures, the powerful pictorial clues in the recognition of objects, storage and indexing of objects in a database, and, ways to access the requested pictorial information. Contents:Multi-media Search: An Authoring Perspective (S W Smoliar et al.)Painting Retrieval Based on Color Semantics (J M Corridoni et al.)Efficient and Robust Retrieval by Shape Content Through Curvature Scale Space (F Mokhtarian et al.)Handling Multiple Instances of Symbols in Pictorial Queries by Image Similarity (A Soffer & H Samet)A New Method for Key Frame Based Video Content Representation (A Hanjalic et al.)Towards Multimedia Thesaurus Support for Media-based Navigation (P H Lewis et al.)Distance to Deformable Prototypes: Encoding Shape Categories for Efficient Search (S Sclaroff)Context-Sensitive and Context-Free Retrieval in a Video Database System (Q Li & K M Lam)Shot Break Detection and Camera Motion Classification in Digital Video (M Haas et al.)IFS Based Indexing in Image Databases (M Nappi et al.)and other papers Readership: Computer scientists, engineers and web specialists.
