Point and Extended Defects in Semiconductors Giorgio Benedek, 2013-06-29 The systematic study of defects in semiconductors began in the early fifties. From that time on many questions about the defect structure and properties have been answered, but many others are still a matter of investigation and discussion. Moreover, during these years new problems arose in connection with the identification and characterization of defects, their role in determining transport and optical properties of semiconductor materials and devices, as well as from the technology of the ever increasing scale of integration. This book presents to the reader a view into both basic concepts of defect physics and recent developments of high resolution experimental techniques. The book does not aim at an exhaustive presentation of modern defect physics; rather it gathers a number of topics which represent the present-time research in this field. The volume collects the contributions to the Advanced Research Workshop Point, Extended and Surface Defects in Semiconductors held at the Ettore Majorana Centre at Erice (Italy) from 2 to 7 November 1988, in the framework of the International School of Materials Science and Technology. The workshop has brought together scientists from thirteen countries. Most participants are currently working on defect problems in either silicon submicron technology or in quantum wells and superlattices, where point defects, dislocations, interfaces and surfaces are closely packed together.

IUTAM Symposium on Mesoscopic Dynamics of Fracture Process and Materials Strength H. Kitagawa,Y. Shibutani,2013-11-11 This volume contains the papers presented at the IUT AM Symposium of Mesoscopic Dynamics of Fracture Process and Materials Strength, held in July 2003, at the Hotel Osaka Sun Palace, Osaka, Japan. The Symposium was proposed in 2001, aiming at organizing concentrated discussions on current understanding of fracture process and inhomogeneous deformation governing the materials strength with emphasis on the mesoscopic dynamics associated with evolutionary mechanical behaviour under micro/macro mutual interaction. The decision of the General Assembly of International Union of Theoretical and Applied Mechanics (IUT AM) to accept our proposal was well-timed and attracted attention. Driven by the development of new theoretical and computational techniques, various novel challenges to investigate the mesoscopic dynamics have been actively done recently, including large-scaled 3D atomistic simulations, discrete dislocation dynamics and other micro/mesoscopic computational analyses. The Symposium attracted sixty-six participants from eight countries, and forty two papers were presented. The presentations comprised a wide variety of fundamental subjects of physics, mechanical models, computational strategies as well as engineering applications. Among the subjects, discussed are (a) dislocation patterning, (b) crystal plasticity, (c) characteristic fracture of amorphous/nanocrystal, (d) nano-indentation, (e) ductile-brittle transition, (f) ab-initio calculation, (g) computational methodology for multi-scale analysis and others.

Long Run to Glory Stephen Lane,2023-09-05 On the morning of August 5, 1984, four of the greatest marathoners of all time lined up for one of the most important and long-awaited races in history. By then, they had dominated their competition for at least five years, upending a century's worth of preconceived notions of what marathoners could do. By decade's end, they had lowered the world record a total of 13 minutes, won 27 major marathon titles, and swept every Olympic and World Championship held in the 1980s. And, in their careers, only once did all four—American Joan Benoit, Norwegians Grete Waitz and Ingrid Kristiansen, and Portugal's Rosa Mota—square off in the same race: at the 1984 Los Angeles Olympics, in the first-ever Women's Olympic Marathon. Such was their talent

that Benoit, the world record holder, entered the race as the underdog. She'd had knee surgery in April, and no one, least of all Benoit herself, was certain she could hold up for 26 miles against her three rivals. Waitz, the former world record holder, was the favorite—she had destroyed the field at the 1983 World Championships and had never lost a marathon she had finished. Kristiansen, who had beaten Waitz twice in the summer of 1984 (albeit at shorter distances), was considered the fastest woman in the race: she held world records at 5,000m and 10,000m, and would break Benoit's marathon record in 1985. Mota had beaten Kristiansen at the 1982 European marathon championships, and was already earning a reputation for raising her level in the biggest races. This is their story, and the story of the first women's Olympic Marathon.

Does Your Vote Count? Paul Kemp, 2003-02-01 As Canadians, we grow up believing that we live in a democracy. In school we are taught about the importance of exercising our right to vote, and that the politicians we elect to the House of Commons are there to be our representatives - to give voice to the concerns of their constituents and to give ordinary citizens a say in how the country is governed. *Does Your Vote Count?* demonstrates just how far Canadian government has strayed from this democratic ideal. Using excerpts from interviews with current and former politicians, civil servants, and academics, author Paul Kemp argues that, in many important ways, our vote does not count. In reality, only one person holds almost all of Ottawa's decision-making power: the prime minister. Backbench MPs, and even many Cabinet ministers, have little or no influence over government policy. Moreover, party discipline is so strictly enforced that MPs rarely express opinions or viewpoints that differ from the party line, either in House debates or in parliamentary committees. Perhaps most alarming, the ability of Parliament to scrutinize government spending has been severely limited. *Does Your Vote Count?* challenges us to take a closer, more critical look at how well our government and electoral system are serving us as Canadian citizens. We may still have the right to choose who sits in the House of Commons, but how meaningful is this right if the people we elect into office have been stripped of all power and influence?
