Digital Convergence in Contemporary Newsrooms
Benedito Medeiros Neto,Inês Amaral,George Ghinea,2021-11-01
This book explores the dynamic landscape in contemporary
newsrooms across three continents by investigating the impact
that the processes of searching, processing, and distributing data
and information and the use of big data, with secure, automatic,
and agile retrieval of information all have in this context.
Journalistic organizations have undergone digital
transformations, and only those implementing accurate
transformations survive. In so doing, the book addresses the
fields of e-Communication, Computer Science, and Information
Science and other areas of the authors' expertise. The first five
chapters focus on technical visits to investigate newsrooms'
productive routines and flows in major dailies from Brazil, Costa
Rica, and England. The remaining chapters consider that the
news production routines are cooperative and distributed and at
the same time need to be managed from different perspectives to
support the convergence of digital media. Last but not least, the
book also identifies an increase in ICT-based tools, with an
increasing connection from new media combined with the
growing trend of digital economy practices as important factors
in the new landscape of digital journalism.

Process Cinema Scott MacKenzie,Janine Marchessault,2019-07-11 Handmade films stretch back to cinema's beginnings, yet until now their rich history has been neglected. Process Cinema is the first book to trace the development of handmade and hand-processed film in its historical and contemporary contexts, and from a global perspective. Mapping the genealogy of handmade film, and uncovering confluences, influences, and interstices between various international movements, sites, and practices, Process Cinema positions the resurgence of handmade and process cinema as a counter-practice to the rise of digital filmmaking. This volume brings together a range of renowned academics and artists to examine contemporary artisanal films, DIY labs, and filmmakers typically left out of the avant-garde canon, addressing the convergence between the analog and the digital in contemporary process cinema. Contributors investigate the history of process cinema – unscripted, improvisatory manipulation of the physicality of film – with chapters on pioneering filmmakers such as Len Lye and Marie Menken, while others discuss an international array of collectives devoted to

processing films in artist-run labs from South Korea to Finland, Australia to Austria, and Greenland to Morocco, along with historical and contemporary practices in Canada and the United States. Addressing the turn to a new, sustainable creative ecology that is central to handmade films in the twenty-first century, and that defines today's reinvigorated film cultures, Process Cinema features some of the most beautiful handcrafted films and the most forward-thinking filmmakers within a global context.

    The Digital Scholar Martin Weller,2011-09-01 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com. While industries such as music, newspapers, film and publishing have seen radical changes in their business models and practices as a direct result of new technologies, higher education has so far resisted the wholesale changes we have seen elsewhere. However, a gradual and fundamental shift in the practice of academics is taking place. Every aspect of scholarly practice is seeing changes effected by the adoption and possibilities of new technologies. This book will explore these changes, their

implications for higher education, the possibilities for new forms of scholarly practice and what lessons can be drawn from other sectors.

Pikachu's Global Adventure Joseph Tobin,2004-02-05 Initially developed in Japan by Nintendo as a computer game, Pokémon swept the globe in the late 1990s. Based on a narrative in which a group of children capture, train, and do battle with over a hundred imaginary creatures, Pokémon quickly diversified into an array of popular products including comic books, a TV show, movies, trading cards, stickers, toys, and clothing. Pokémon eventually became the top grossing children's product of all time. Yet the phenomenon fizzled as quickly as it had ignited. By 2002, the Pokémon craze was mostly over. Pikachu's Global Adventure describes the spectacular, complex, and unpredictable rise and fall of Pokémon in countries around the world. In analyzing the popularity of Pokémon, this innovative volume addresses core debates about the globalization of popular culture and about children's consumption of mass-produced culture. Topics explored include the origins of Pokémon in Japan's valorization of cuteness and traditions of insect collecting and anime; the efforts of Japanese producers and American marketers to localize it for foreign markets by muting its sex, violence, moral ambiguity, and general feeling of Japaneseness; debates about children's vulnerability versus agency as consumers; and the contentious question of Pokémon's educational value and place in school. The contributors include teachers as well as scholars from the fields of anthropology, media studies, sociology, and education. Tracking the reception of Pokémon in Japan, the United States, Great Britain, France, and Israel, they emphasize its significance as the first Japanese cultural product to enjoy substantial worldwide success and challenge western dominance in the global production and circulation of cultural goods. Algorithms, Automation, and News Neil Thurman,Seth C. Lewis,Jessica Kunert,2021-05-18 This book examines the growing importance of algorithms and automation—including emerging forms of artificial intelligence—in the gathering, composition, and distribution of news. In it the authors connect a long line of research on journalism and computation with scholarly and professional terrain yet to be explored. Taken as a whole, these chapters share some of the noble ambitions of the pioneering publications on 'reporting algorithms', such as a desire to see computing help journalists in their watchdog role by holding power to account. However, they also go further, firstly by addressing the fuller range of technologies that computational journalism now consists of: from chatbots and recommender systems to artificial intelligence and atomised journalism. Secondly, they advance the literature by demonstrating the increased variety of uses for these technologies, including engaging underserved audiences, selling subscriptions, and recombining and re-using content. Thirdly, they problematise computational journalism by, for example, pointing out some of the challenges inherent in applying artificial intelligence to investigative journalism and in trying to preserve public service values. Fourthly, they offer suggestions for future research and practice, including by presenting a framework for developing democratic news recommenders and another that may help us

think about computational journalism in a more integrated, structured manner. The chapters in this book were originally published as a special issue of Digital Journalism.

Semantic Technologies in Content Management Systems Wolfgang Maass,Tobias Kowatsch,2012-01-04 Content Management Systems (CMSs) are used in almost every industry by millions of end-user organizations. In contrast to the 90s, they are no longer used as isolated applications in one organization but they support critical core operations in business ecosystems. Content management today is more interactive and more integrative: interactive because end-users are increasingly content creators themselves and integrative because content elements can be embedded into various other applications. The authors of this book investigate how Semantic Technologies can increase interactivity and integration capabilities of CMSs and discuss their business value to millions of end-user organizations. This book has therefore the objective, to reflect existing applications as well as to discuss and present new applications for CMSs that use Semantic Technologies. An evaluation of 27 CMSs concludes this book and provides a basis for IT executives that plan to adopt or replace a CMS in the near future.

Narrative Absorption Frank Hakemulder,Moniek M. Kuijpers,Ed S. Tan,Katalin Bálint,Miruna M. Doicaru,2017-11-15 Narrative Absorption brings together research from the social sciences and Humanities to solve a number of mysteries: Most of us will have had those moments, of being totally absorbed in a book, a movie, or computer game. Typically we do not have any idea about how we ended up in such a state. Nor do we fully realize how we might have changed as we return for the fictional worlds we have visited. The feeling of being absorbed is one of the most illusive and transient feelings, but also one that

motivates audiences to spend considerable amounts of time in narrative worlds, and one that is central to our understanding of the effects of narratives on beliefs and behavior. Key specialists inform the reader of this book about the nature of the peculiar state of consciousness during episodes of absorption, the perception of absorption in history, the role of absorption in meaningful experiences with narratives, the relation with related phenomena such as suspense and identification, issues of measurement, and the practical implications, for instance in education-entertainment. Various fields have worked separately on topics of absorption, albeit using different terminology and methods, but having reached a high level of development and complexity in understanding absorption. Now is the time to bring them together. This volume will be a point of reference for years to come.
