Geographies of Urban Governance Joyeeta Gupta, Karin Pfeffer, Hebe Verrest, Mirjam Ros-Tonen, 2015-08-08 With a current population inflow into cities of 200,000 people per day, UN Habitat expects that up to 75% of the global population will live in cities by 2050. Influenced by forces of globalization and global change, cities and urban life are transforming rapidly, impacting human welfare, economic development and urban-regional landscapes. This poses new challenges to urban governance, while emerging city networks, advancing geo-technologies and increasing production of continuous data streams require governance actors to re-think and re-work conventional work processes and practices. This book has been written to enhance our understanding of how governance can contribute to the development of just and resilient cities in a context of rapid urban transformations. It examines current governance patterns from a geographical and inclusive development perspective, emphasizing the importance of place, space, scale and human-environment interactions, and paying attention to contemporary processes of participation, networking, and spatialized digitization. The challenge we are facing is to turn future cities into inclusive cities that are diverse but just and within their ecological limits. We believe that the state-of-the-art overview of topical discussions on governance theories, instruments, methods and practices presented in this book provides a basis for understanding and analyzing these challenges.

Dubai Pranay Gupte,2011 In just two decades, Dubai has reinvented itself from a small, poor and quiet fishing village to a dazzling city with a vibrant urban life. How did this happen? Home to more than 200 nationalities particularly those from the Indian subcontinent the emirate's choice to welcome expatriates has paid off. Cultivating an open and welcoming culture, Dubai manages to attract people from all over the world, heartily embracing any entrepreneurial contribution they wish to make. The emirate is now also known for its cosmopolitan melting-pot culture, and its enabling environment to conduct business, and this, along with the tax-free system and hassle-free infrastructure, makes it a much sought- after site for multinational enterprises who want a base in Asia. Unlike the Gulf emirates that can count on petroleum wealth, Dubai has wound its way to prosperity by planning carefully and executing those plans methodically. Its airline and luxury construction have made it a popular destination for luxury tourism. Projects like the Burj al-Arab, the Palm Jumeriah and the Burj Khalifa, along with events like the world's richest horserace the Dubai World Cup and the Dubai Shopping Festival, have sustained tourist interest and focused the world's attention on the emirate.

Smart Global Megacities T. M. Vinod Kumar,2021-07-15 This book, the first volume, highlights 8 out of a total of about 36 megacities in the World which by definition have 10 million inhabitants. The cities/chapters presented in this book are based on recent advance such as the wide use of ICT, IOT, e-Governance, e-Democracy, smart economy and flattening and acceleration of the world that is taking place in recent times as reported by 3 times Pulitzer Prize Winner Thomas Friedman. It therefor departs from other ideologies where only a certain megacity qualifies for the title of smart global megacities while in reality every megacity can, and presents how smart global megacities can be created.

Global Energetics of the Atmosphere Boris M. Smirnov,2022-01-01 This book looks at global atmospheric processes from a physical standpoint using available current and past observational data taken from measurements of relevant atmospheric parameters. It describes various aspects of the current atmospheric state and its future evolution, focusing primarily on the energetic balance of the Earth and atmosphere, and taking into consideration the multi-faceted global equilibrium between these two systems, carbon, and water. The analysis presented in this book restricts itself to those objects and processes that allow us to obtain reliable conclusions and numerical estimations, in contrast to current climate models with much larger numbers of parameters for describing the same problems. As a result, in spite of the roughness of numerical parameters, the book unveils a reliable and transparent physical picture of energetic phenomena in the global atmosphere. In particular, it shows that approximately only one-fourth of atmospheric water returns from the atmosphere to the Earth in the form of free molecules. It was shown that the contemporary warming of our planet has an anthropogenic character, and that the average global temperature increases due to an increase of the concentration of atmospheric CO₂ molecules, via an increase in

atmospheric moisture, as well as an increase in the amount of aerosols in the atmosphere. Accumulation of atmospheric carbon dioxide plays a subsidiary role in this process and gives approximately one-third in a change of the global temperature, while an increase in the amount of atmospheric water by as little as only 0.3% per year explains the observed warming of the Earth. The book shows how the greenhouse instability of the atmosphere evidently has its origins in the Eocene epoch, presenting an analysis of the influence of various types of global energetic processes on the climate that differs from the official stance on these problems.

The book is a written expression of an expert's view on the problem of human settlement that aims to raise discussions, from concerned policymakers, on the identification of the problems and inciting proposals for solutions to the growing problem of human settlement in large emerging cities. The text is divided in two parts: Urban Problems and Solutions. The first part provides the basic definition and aspects of urbanization and the identification of problems of human settlement in urbanized areas. Part II introduces possible measures to solve the problems of urbanization, such as changing the design of metropolitan areas; maintaining ownership in public corporations; capturing rise in land values; and securing relatively full employment for urban workers. Economists, sociologists, urban planners and policymakers, engineers and designers, and people affected by the problems of urbanization will find this book invaluable.
