The Memory Book Lara Avery, 2016-07-05 They tell me that my memory will never be the same, that I'll start forgetting things. At first just a little, and then a lot. So I'm writing to remember. Sammie McCoy is a girl with a plan: graduate at the top of her class and get out of her small town as soon as possible. Nothing will stand in her way--not even the rare genetic disorder the doctors say will slowly steal her memories and then her health. So the memory book is born: a journal written to Sammie's future self, so she can remember everything from where she stashed her study guides to just how great it feels to have a best friend again. It's where she'll record every perfect detail of her first date with longtime-crush Stuart, a gifted young writer home for the summer. And where she'll admit how much she's missed her childhood friend Cooper, and the ridiculous lengths he will go to make her laugh. The memory book will ensure Sammie never forgets the most important parts of her life--the people who have broken her heart, those who have mended it--and most of all, that if she's going to die, she's going to die living. This moving and remarkable novel introduces an inspiring character you're sure to remember, long after the last page.

Science of Memory Concepts Henry L. Roediger III, Yadin Dudai, Susan M. Fitzpatrick, 2007-04-26 Scientists currently study memory from many different perspectives: neurobiological, ethological, animal conditioning, cognitive, behavioral neuroscience, social, and cultural. The aim of this book is to help initiate a new science of memory by bringing these perspectives together to create a unified understanding of the topic. The book began with a conference where leading practitioners from all these major approaches met to analyze and discuss 16 concepts that are crucial to our understanding of memory. Each of these 16 concepts is addressed in a section of the book, and in the 66 succinct chapters that fill these sections, a leading researcher addresses the section's concept by clearly stating his or her position on it, elucidating how it is used, and discussing how it should be used in future research. For some concepts, there is general agreement among practitioners from different fields and levels of analysis, but for others there is general disagreement and much controversy. A final chapter in each section, also written by a leading researcher, integrates the various viewpoints offered on the section's concept, then draws conclusions about the concept. This groundbreaking volume will be an indispensable reference for all the students and researchers who will build upon the foundation it provides for the new science of memory.

Memory Susannah Radstone, Bill Schwarz, 2010 These essays survey the histories, the theories and the fault lines that compose the field of memory research. Prosthetic Memory Alison Landsberg, 2004 Prosthetic Memory argues that mass cultural forms such as cinema and television in fact contain the still-unrealized potential for a progressive politics based on empathy for the historical experiences of others. The technologies of mass culture make it possible for anyone, regardless of race, ethnicity, or gender, to share collective memories--to assimilate as deeply felt personal experiences historical events through which they themselves did not live.

Breath, Eyes, Memory Edwidge Danticat, 2015-02-24 The 20th anniversary edition of Edwidge Danticat's groundbreaking debut, now an established classic--revised and with a new introduction by the author, and including extensive bonus materials At the age of twelve, Sophie Caco is sent from her impoverished Haitian village to New York to be reunited with a mother she barely remembers. There she discovers secrets that no child should ever know, and a legacy of shame that can be healed only when she returns to Haiti—to the women who first reared her. What ensues is a passionate journey through a landscape charged with the supernatural and scarred by political violence. In her stunning literary debut, Danticat evokes the wonder, terror, and heartache of her native Haiti—and the enduring strength of Haiti's women—with vibrant imagery and narrative grace that bear witness to her people's suffering and courage.

Essentials of Human Memory (Classic Edition) Alan Baddeley, 2013-07-31 This Classic Edition of the best-selling textbook offers an in-depth overview of approaches to the study of memory. With empirical research from both the real world and the neuropsychological clinic, the book explains the fundamental workings of human memory in a clear and accessible style. This edition contains a new introduction and concluding chapter in which the author reflects on how the book is organized, and also on how the field of memory has developed since it was first published. Essentials of Human Memory evolved from a belief that, although the amount we know about memory has increased enormously in recent years, it is still possible to explain it in a way that would be fully understood by the general reader. After a broad overview of approaches to the study of memory, short-term and working memory are discussed, followed by learning, the role of organizing in remembering and factors influencing forgetting, including emotional variables and claims for the role of repression in what has become known as the false memory syndrome. The way in which knowledge of the world is stored is discussed next, followed by an account of the processes underlying retrieval, and their application to the practical issues of eyewitness testimony. The breakdown of memory in the amnesic syndrome is discussed next, followed by discussion of the way in which memory develops in children, and declines in the elderly. After a section concerned with mnemonic techniques and memory improvement, the book ends with an overview of recent developments in the field of human memory. Written by the leading expert in human memory, recently awarded the British Psychological Society Research Board Lifetime Achievement Award, Essentials of Human Memory will be of interest to students of Cognitive Psychology, Neuropsychology, and anyone with an interest in the workings of memory.

In Memory of Memory Maria Stepanova, 2021-02-09 An exploration of life at the margins of history from one of Russia's most exciting contemporary writers Shortlisted for the 2021 International Booker Prize Winner of the MLA Lois Roth Translation Award With the death of her aunt, the narrator is left to sift through an apartment full of faded photographs, old postcards, letters, diaries, and heaps of souvenirs: a withered repository of a century of life in Russia. Carefully reassembled with calm, steady hands, these shards tell the story of how a seemingly ordinary Jewish family somehow managed to survive the myriad persecutions and repressions of the last century. In dialogue with writers like Roland Barthes, W. G. Sebald, Susan Sontag, and Osip Mandelstam, In Memory of Memory is imbued with rare intellectual curiosity and a wonderfully soft-spoken, poetic voice. Dipping into various forms—essay, fiction, memoir, travelogue, and historical documents—Stepanova assembles a vast panorama of ideas and personalities and offers an entirely new and bold exploration of cultural and personal memory.

Remember Lisa Genova, 2021-03-23 NEW YORK TIMES BESTSELLER • A fascinating exploration of the intricacies of how we remember, why we forget, and what we can do to protect our memories, from the Harvard-trained neuroscientist and bestselling author of Still Alice. “Using her expertise as a neuroscientist and her gifts as a storyteller, Lisa Genova explains the nuances of human memory”—Steven Pinker, Johnstone Professor of Psychology, Harvard University, author of How the Mind Works Have you ever felt a crushing wave of panic when you can't for the life of you remember the name of that actor in the movie you saw last week, or you walk into a room only to forget why you went there in the first place? If you're over forty, you're probably not laughing. You might even be worried that these lapses in memory could be an early sign of Alzheimer's or dementia. In reality, for the vast majority of us, these examples of forgetting are completely normal. Why? Because while memory is amazing, it is far from perfect. Our brains aren't designed to remember every name we hear, plan we make, or day we experience. Just because your memory sometimes fails doesn't mean it's broken or succumbing to disease. Forgetting is actually part of being human. In Remember, neuroscientist and acclaimed novelist Lisa Genova delves into how memories are made and how we retrieve them. You'll learn whether forgotten memories are temporarily inaccessible or erased forever and why some memories are built to exist for only a few seconds (like a passcode) while others can last a lifetime (your wedding day). You'll come to appreciate the clear distinction between normal forgetting (where you parked your car) and forgetting due to Alzheimer's (that you own a car). And you'll see how memory is profoundly impacted by meaning, emotion, sleep, stress, and context. Once you understand the language of memory and how it functions, its incredible strengths and maddening weaknesses, its natural vulnerabilities and potential superpowers, you can both vastly improve your ability to remember and feel less rattled when you inevitably forget. You can set educated expectations for your memory, and in doing so, create a better relationship with it. You don't have to fear it anymore. And that can be life-changing.

The Memory Box Joanna Rowland, 2017 I'm scared I'll forget you]]' From the perspective of a young child, Joanna Rowland artfully describes what it is like to remember and grieve a loved one who has died. The child in the story creates a memory box to keep mementos and written memories of the loved one, to help in the grieving process. Heartfelt and comforting, The Memory Box will help children and adults talk about this very difficult topic together. The unique point of view allows the reader to imagine the loss of any they have loved - a friend, family member, or even a pet. A parent guide in the back includes information on helping children manage the complex and difficult emotions they feel when they lose someone they love, as well as suggestions on how to create their own memory box.

The Memory Process Suzanne Nalbantian, Paul M. Matthews, James L. McClelland, 2011 The Memory Process offers a groundbreaking, interdisciplinary approach to the understanding of human memory, with contributions from both neuroscientists and humanists. The first book to link the neuroscientific study of memory to the investigation of memory in the humanities, it connects the latest findings in memory research with insights from philosophy, literature, theater, art, music, and film. Chapters from the scientific perspective discuss both fundamental concepts and ongoing debates from genetic and epigenetic approaches, functional neuroimaging, connectionist modeling, dream analysis, and neurocognitive studies. The humanist analyses offer insights about memory from outside the laboratory: a taxonomy of memory gleaned from modernist authors including Virginia Woolf, James Joyce, and William Faulkner; the organization of memory, seen in drama ranging from Hamlet to The Glass Menagerie; procedural memory and emotional memory in responses to visual art; music's dependence on the listener's recall; and the vivid renderings of memory and forgetting in such films as Memento and Eternal Sunshine of the Spotless Mind. The chapters from the philosophical perspective serve as the bridge between science and the arts. The volume's sweeping introduction offers an integrative merging of neuroscientific and humanistic findings.

The organization and structure of autobiographical memory John Mace, 2019-10-15 The topic of autobiographical memory has held a prominent role in memory research for the past 30 years, as it has proven indispensable to the understanding of human memory and cognition. An important focus of autobiographical memory research is uncovering the basic structure, nature, and organization of the autobiographical memory system. This book explores the organization and structure of autobiographical memory. Based on over thirty years of research, and the latest empirical findings, it presents the major theories and problems in the science of autobiographical memory organization. At its core are two influential global views on the organization, structure, and function of autobiographical memory (chapters 2 and 3). In addition, the volume examines the organization of autobiographical memory from a developmental perspective (chapter 4). It includes a chapter examining the neuroscience of autobiographical memory organization (chapter 7), and a chapter examining

organization from a functional perspective (chapter 6). Also covered is the role of culture in forming autobiographical memory (chapter 5), the role of the self in organizing autobiographical memory (chapter 8), insights from the reminiscence bump on organization (chapter 9), and a chapter on the organization of episodic autobiographical memories (chapter 10). For students and researcher with an interest in memory, the volume is a timely and important addition to their literature.
