Theoretical Approaches to Disharmonic Word Order Theresa Biberauer, Michelle Sheehan, 2013-12-05 This book considers the implications of cross-linguistic word-order patterns for linguistic theory. One of the salient results of Joseph Greenberg's pioneering work in language typology was the notion of a 'harmonic' word-order type, whereby if the verb appears at the left or right edge of the verb phrase, other heads (e.g. prepositions, nouns) also tend to do so. Today, however, there is recognition in both the typological and generative literature that very many, and possibly even the majority of languages, fail to be fully harmonic in the sense that all head-complement pairs pattern alike. But does this imply limitless variation? The chapters in this volume, written by international scholars, discuss the issues arising from this basic question, drawing on data from typologically distinct disharmonic languages, including Mandarin Chinese, Basque, Mócheno (a Tyrolean variety spoken in Northern Italy), French, English, Hixkaryana (a Cariban language), Khalkha Mongolian, Uyghur Turkic, and Afrikaans. The volume begins with a substantial introduction to the study of word order and its relation to linguistic theory. It is then divided into sections on the nature of disharmony; the role of prosody; the question of Antisymmetry and novel alternatives to Antisymmetry; and the Final-over-Final Constraint. Aside from introducing new empirical findings, the

volume also offers a range of new perspectives on disharmonic word orders, the status of word order in linguistic theory, and theoretical accounts of typological gaps.

Pseudo-Coordination and Multiple Agreement Constructions Giuliana Giusti, Vincenzo Nicolò Di Caro, Daniel Ross, 2022-03-16 Verbal Pseudo-Coordination (as in English 'go and get') has been described for a number of individual languages, but this is the first edited volume to emphasize this topic from a comparative perspective, and in connection to Multiple Agreement Constructions more generally. The chapters include detailed analyses of Romance, Germanic, Slavic and other languages. These contributions show important cross-linguistic similarities in these constructions, as well as their diversity, providing insights into areas such as the morphology-syntax and syntax-semantics interfaces, dialectal variation and language contact. This volume establishes Pseudo-Coordination as a descriptively important and theoretically challenging cross-linguistic phenomenon among Multiple Agreement Constructions and will be of interest to specialists in individual languages as well as typologists and theoreticians, serving as a foundation to promote continued research.
