*The Googlization of Everything* Siva Vaidhyanathan,2012-03-13 In the beginning, the World Wide Web was exciting and open to the point of anarchy, a vast and intimidating repository of unindexed confusion. Into this creative chaos came Google with its dazzling mission—To organize the world’s information and make it universally accessible—and its much-quoted motto, Don’t be evil. In this provocative book, Siva Vaidhyanathan examines the ways we have used and embraced Google—and the growing resistance to its expansion across the globe. He exposes the dark side of our Google fantasies, raising red flags about issues of intellectual property and the much-touted Google Book Search. He assesses Google’s global impact, particularly in China, and explains the insidious effect of Googlization on the way we think. Finally, Vaidhyanathan proposes the construction of an Internet ecosystem designed to benefit the whole world and keep one brilliant and powerful company from falling into the evil it pledged to avoid.

**The Future of Precision Medicine in Australia** Robert C. Williamson,Warwick Anderson,Stephen Duckett,Ian Frazer,Carrie Hillyard,Emma Kowal,John Mattick,Catriona McLean,Kathryn North,Adrian Turner,Courtney Addison,2018-01-31 The Future of Precision Medicine in Australia explores the current trends in precision medicine technologies and the role that broader implementation of precision medicine capabilities may play in the Australian context.Recent technological advances allow the determination of a wide range of data about an individual's genetic and biochemical make-up, as formed by their genes, environment and lifestyle. These advances can and do affect the clinical management of a person's health and disease. The ability to analyse disease in terms of an individual's make-up, when compared with and studied alongside aggregated clinical and laboratory data from healthy and diseased populations, is termed 'precision' or 'personalised' medicine. Although medicine has always had personal and predictive aspects, precision medicine allows health and disease to be viewed at an increasingly fine-grained resolution, attuned to the complexities of both the biology of each individual and variation within the population.

**Genetic Nature/Culture** Prof. Alan H. Goodman,Prof. Deborah Heath,M. Susan Lindee,2003-11-06 The so-called science wars pit science against culture, and nowhere is the struggle more contentious—or more fraught with paradox—than in the burgeoning realm of genetics. A constructive response, and a welcome intervention, this volume brings together biological and cultural anthropologists to conduct an interdisciplinary dialogue that provokes and instructs even as it bridges the science/culture divide. Individual essays address issues raised by the science, politics, and history of race, evolution, and identity; genetically modified organisms and genetic diseases; gene work and ethics; and the boundary between humans and animals. The result is an entree to the complicated nexus of questions prompted by the power and importance of genetics and genetic thinking, and the dynamic connections linking culture, biology, nature, and technoscience. The volume offers critical perspectives on science and culture, with contributions that span disciplinary divisions and arguments grounded in both biological perspectives and cultural analysis. An invaluable resource and a provocative introduction to new research and thinking on the uses and study of genetics, Genetic Nature/Culture is a model of fruitful dialogue, presenting the quandaries faced by scholars on both sides of the two-cultures debate.

**Disaster Studies** Janki Andharia,2020-03-25 This book covers several dimensions of disaster studies as an emerging discipline. It is the inaugural book in the series ‘Disaster Studies and Management’ and deals with questions such as “Is disaster management a field of practice, a profession, or simply a new area of study?” Exploring intersectionalities, the book also examines areas of research that could help enhance the discourse on disaster management from policy and practice perspectives, revisiting conventional event-centric approaches, which are the basis for most writings on the subject. Several case studies and comparative analyses reflect a critical reading of research and practice concerning disasters and their management. The book offers valuable insights into various subjects including the challenge of establishing inter- and multi-disciplinary teams within the academia involved in disaster studies, and sociological and anthropological readings of post-disaster memoryscapes. Each of the contributors has an enduring interest in disaster studies, thus enriching the book immensely. This book will be of interest to all the students and scholars of disaster studies and disaster management, as well as to practitioners and policymakers.
