Disco Sour Giuseppe Porcaro,2018-05-24 A politician addicted to dating apps embarks on an existential odyssey to save democracy from being swiped away. In the aftermath of a continental civil-war, nation-states have collapsed, the European UnionTM holds on, preventing anarchy. Bastian Balthazar Bux is a leading member of The Federation®, the European network of civil society and local governments. Bastian has just been unexpectedly dumped through an app, the BreakupShopTM service. Heavy hearted, he just wants to drink, get on with work and forget his romantic woes. However, he discovers that Nathan Ziggy Zukowsky is planning to sell Plebiscitum®, a dating-style app that is meant to replace elections with a simple swipe, at the same conference he is invited to attend in Chile. Haunted by the ghosts of his recent relationship, he finds himself without his all-important Morph® phone, just a few hours before embarking on his trip to try to save democracy. Will he make it to his conference on the other side of the world? Will he stop Zukowsky from selling his app? And will he ever find a way to deal with his breakup?

Implementing Database Security and Auditing Ron Ben Natan,2005-05-20 This book is about database security and auditing. You will learn many methods and techniques that will be helpful in securing, monitoring and auditing database environments. It covers diverse topics that include all aspects of database security and auditing – including network security for databases, authentication and authorization issues, links and replication, database Trojans, etc. You will also learn of vulnerabilities and attacks that exist within various database environments or that have been used to attack databases (and that have since been fixed). These will often be explained to an "internals level. There are many sections which outline the "anatomy of an attack – before delving into the details of how to combat such an attack. Equally important, you will learn about the database auditing landscape – both from a business and regulatory requirements perspective as well as from a technical implementation perspective. * Useful to the database administrator and/or security administrator – regardless of the precise database vendor (or vendors) that you are using within your organization. * Has a large number of examples – examples that pertain to Oracle, SQL Server, DB2, Sybase and even MySQL.. * Many of the techniques you will see in this book will never be described in a manual or a book that is devoted to a certain database product. * Addressing complex issues must take into account more than just the database and focusing on capabilities that are provided only by the database vendor is not always enough. This book offers a broader view of the database environment – which is not dependent on the database platform – a view that is important to ensure good database security.

Advances in Computational and Bio-Engineering S. Jyothi,D. M. Mamatha,Suresh Chandra Satapathy,K. Srujan Raju,Margarita N. Favorskaya,2020-07-19 This book gathers state-of-the-art research in computational engineering and bioengineering to facilitate knowledge exchange between various scientific communities. Computational engineering (CE) is a relatively new discipline that addresses the development and application of computational models and simulations often coupled with high-performance computing to solve complex physical problems arising in engineering analysis and design in the context of natural phenomena. Bioengineering (BE) is an important aspect of computational biology, which aims to develop and use efficient algorithms, data structures, and visualization and communication tools to model biological systems. Today, engineering approaches are essential for biologists, enabling them to analyse complex physiological processes, as well as for the pharmaceutical industry to support drug discovery and development programmes.

The Future of Identity in the Information Society Vashek Matyáš,Simone Fischer-Hübner,Daniel Cvrcek,Petr Švenda,2011-11-29 What constitutes an identity, how do new technologies affect identity, how do we manage identities in a globally networked information society? The increasing div- sity of information and communication technologies and their equally wide range of usage in personal, professional and official capacities raise challenging questions of identity in a variety of contexts. The aim of the IFIP/FIDIS Summer Schools has been to encourage young a- demic and industry entrants to share their own ideas about privacy and identity m- agement and

to build up collegial relationships with others. As such, the Summer Schools have been introducing participants to the social implications of information technology through the process of informed discussion. The 4th International Summer School took place in Brno, Czech Republic, during September 1-7, 2008. It was organized by IFIP (International Federation for Infor- tion Processing) working groups 9.2 (Social Accountability), 9.6/11.7 (IT Misuse and the Law) and 11.6 (Identity Management) in cooperation with the EU FP6 Network of Excellence FIDIS and Masaryk University in Brno.
