The Sovereign Individual James Dale Davidson, William Rees-Mogg, Lord William Rees-Mogg, 1999-08-26 The authors identify both the likely disasters and the potential for prosperity inherent in the advent of the information age.

Lift Every Voice Lani Guinier, 1998 The author was nominated as Assistant Attorney General for Civil Rights, but after critics from the right labelled her the Quota Queen, the president not only withdrew his nomination but refused to allow her an opportunity to defend herself. Now she writes about what really happened behind closed doors, about the nation's racial history and commitment to equality and democracy, and about the courage of ordinary people.

Nihilism Inc Arran Gare, 1996-01-01

Fluxus Codex Jon Hendricks, 1988-10-15 Fluxus was an art movement of the 1960s and 70s that set out to abolish the canonized art idioms of the day. Pioneers of Conceptual Art and Minimalism, the Fluxus artists were known for their environments, performance art and mass-producible objects. This book is a study of the Fluxus movement.

The Pepper Wreck Filipe Vieira de Castro, 2005 An account of the history and evacuation of the Portuguese merchant ship, Nossa Senhora dos Martires, sunk at the mouth of the Tagus River in 1606.

The Laws of Robots Ugo Pagallo, 2013-05-16 This book explores how the design, construction, and use of robotics technology may affect today's legal systems and, more particularly, matters of responsibility and agency in criminal law, contractual obligations, and torts. By distinguishing between the behaviour of robots as tools of human interaction, and robots as proper agents in the legal arena, jurists will have to address a new generation of "hard cases." General disagreement may concern immunity in criminal law (e.g., the employment of robot soldiers in battle), personal accountability for certain robots in contracts (e.g., robo-traders), much as clauses of strict liability and negligence-based responsibility in extra-contractual obligations (e.g., service robots in tort law). Since robots are here to stay, the aim of the law should be to wisely govern our mutual relationships.

Redesigning Organizations Denise Feldner, 2019-12-11 This book offers readers a deeper understanding of the Cyberspace, of how institutions and industries are reinventing themselves, helping them excel in the transition to a fully digitally connected global economy. Though technology plays a key part in this regard, societal acceptance is the most important underlying condition, as it poses pressing challenges that cut across companies, developers, governments and workers. The book explores the challenges and opportunities involved, current and potential future concepts, critical reflections and best practices. It addresses connected societies, new opportunities for governments, the role of trust in digital networks, and future education networks. In turn, a number of representative case studies demonstrate the current state of development in practice.

Wine Stefan K. Estreicher, 2006 There are many books that explore actual, physical, sacred space and pilgrimage sites. This is a different kind of book. It introduces seven traditional 'sacred spaces' but then leads readers into a deeper reflection on what such 'sacred space' means in our own lives and experience. The various sacred spaces explored are: the Celtic Cross; the infinite knot; hilltops; wells and springs; causeways and bridges;

thresholds and burial grounds; and boundaries. In each chapter, the author introduces a 'sacred space' as the main theme and then illustrates this by associating it with a particular stage of life and a particular sacramental experience. The ideas are then brought together by means of a scripture story.

Hurdle, the Book on Business Planning Timothy Berry,2006

Lewis Henry Morgan and the Invention of Kinship Thomas R. Trautmann,2008-07-01 Lewis Henry Morgan of Rochester, New York, lawyer and pioneering anthropologist, was the leading American contributor of his generation to the social sciences. Among the classic works whose conjunction in the 1860s gave modern anthropology its shape, Morgan's massive and technical *Systems of Consanguinity and Affinity of the Human Family* was decisive. Thomas R. Trautmann offers a new interpretation of the genesis of "kinship" and of the role it played in late nineteenth-century intellectual history. This Bison Books edition features a new introduction and appendices by the author.

The Portable Renaissance Reader James Bruce Ross,Mary Martin McLaughlin,1977-08-25 Essential passages form the works of more than 100 fifteenth-and sixteenth-century thinkers and writers, including Erasmus, Cervantes, Boccaccio, Montaigne, Bodin, Dürer, Machiavelli, Guicciardini, Rabelais, Leonardo, Cellini, Copernicus, Galileo, Savonarola, Luther, and Calvin.

Macmillan Dictionary of Historical Terms Chris Cook,2016-07-27 This new edition is fully revised, updated and enlarged. It now contains additional material on non-European history, covering Africa, Latin America and Asia. The dictionary also deals with new terms which have only recently been introduced into the language. This comprehensive work of reference will give both the historian and the layman compact and precise definitions of the key historical terms he is likely to encounter.

The Mathematics of Life Ian Stewart,2011-06-07 Biologists have long dismissed mathematics as being unable to meaningfully contribute to our understanding of living beings. Within the past ten years, however, mathematicians have proven that they hold the key to unlocking the mysteries of our world -- and ourselves. In *The Mathematics of Life*, Ian Stewart provides a fascinating overview of the vital but little-recognized role mathematics has played in pulling back the curtain on the hidden complexities of the natural world -- and how its contribution will be

even more vital in the years ahead. In his characteristically clear and entertaining fashion, Stewart explains how mathematicians and biologists have come to work together on some of the most difficult scientific problems that the human race has ever tackled, including the nature and origin of life itself.

Ontological Semantics Sergei Nirenburg, Victor Raskin, 2004 A comprehensive theory-based approach to the treatment of text meaning in natural language processing applications.

Reading in the Brain Stanislas Dehaene, 2009-11-12 A renowned cognitive neuroscientist's fascinating and highly informative account of how the brain acquires reading How can a few black marks on a white page evoke an entire universe of sounds and meanings? In this riveting investigation, Stanislas Dehaene provides an accessible account of the brain circuitry of reading and explores what he calls the "reading paradox": Our cortex is the product of millions of years of evolution in a world without writing, so how did it adapt to recognize words? *Reading in the Brain* describes pioneering research on how we process language, revealing the hidden logic of spelling and the existence of powerful unconscious mechanisms for decoding words of any size, case, or font. Dehaene's research will fascinate not only readers interested in science and culture, but also educators concerned with debates on how we learn to read, and who wrestle with pathologies such as dyslexia. Like Steven Pinker, Dehaene argues that the mind is not a blank slate: Writing systems across all cultures rely on the same brain circuits, and reading is only possible insofar as it fits within the limits of a primate brain. Setting cutting-edge science in the context of cultural debate, *Reading in the Brain* is an unparalleled guide to a uniquely human ability.

The Hacker's Dictionary Eric S. Raymond, 2017-06-19 This document is a collection of slang terms used by various subcultures of computer hackers. Though some technical material is included for background and flavor, it is not a technical dictionary; what we describe here is the language hackers use among themselves for fun, social communication, and technical debate.
