Criminology and Archaeology Simon Mackenzie,Penny Green,2009-11-04 This collection is the product of a collaborative venture between criminologists and archaeologists concerned with the international market in illicit antiquities. It examines the state of regulation in the antiquities market, with a particular focus on the UK's position, but also with reference to the international context. Looting happens routinely and many countries have rich deposits of cultural material. Antiquities are highly collectable, and there are several prominent international centres for trade. As well as the legitimate face of the antiquities trade there therefore exists an international illicit market in which cultural objects are trafficked for profit in breach of national laws and international conventions. It is within such a complex international and local regulatory context that the essays presented here emerge, focusing upon three areas in particular: the demand for looted antiquities; the supply of cultural artefacts which originate in source countries; and regulation of the international market in antiquities. Criminology has long been interested in transnational crime and its regulation. Archaeologists' concerns lie in the destructive consequences of antiquities looting, which erases our knowledge of the past. In the papers presented here both disciplines present new data and analysis to forge a more coherent understanding of the nature and failings of the regulatory framework currently in place to combat the criminal market in antiquities.

Technologies for Prehistoric & Historic Preservation Congress of the U.S., Washington, DC. Office of Technology Assessment,1986 Archaeological remains and historic structures and landscapes are important tangible reminders of the United States' rich and diverse cultural heritage. In recent years the stresses on these unique, nonrenewable cultural resources have increased dramatically. This report presents the primary findings of an assessment requested by the House of Representatives Committee on Interior and Insular Affairs. Focus is on the applications of preservation technologies rather than preservation disciplines. The study examines the current use of preservation technologies and identifies research and development needs. It also explores how improvements in Federal policy and implementation can make more effective use of technologies appropriate for managing this country's prehistoric and historic cultural resources. Appendices are: (1) Cultural Resources Management Laws and Regulations; (2) Documentation and Conservation of Rock Art; (3) Registration and Private Ownership of Archaeological Objects; (4) National Register Criteria from the Introduction to: 'How to Apply the National Register Criteria for Evaluation'; (5) National Register of Historic Places Inventory--Nomination Form; (6) U.S. National Park Service Cultural Programs; (7) Advisory Council on Historic Preservation; (8) National Trust for Historic Preservation; and (9) National Building Museum. Handbook of Dynamic Data Driven Applications Systems Frederica Darema,Erik P. Blasch,Sai Ravela,Alex J. Aved,2023-10-16 This Second Volume in the series Handbook of Dynamic Data Driven Applications Systems (DDDAS) expands the scope of the methods and the application areas presented in the first Volume and aims to provide additional and extended content of the increasing set of science and engineering advances for new capabilities enabled through DDDAS. The methods and examples of breakthroughs presented in the book series capture the DDDAS paradigm and its scientific and technological impact and benefits. The DDDAS paradigm and the ensuing DDDAS-based frameworks for systems’ analysis and design have been shown to engender new and advanced capabilities for understanding, analysis, and management of engineered, natural, and societal systems (“applications systems”), and for the commensurate wide set of scientific and engineering fields and applications, as well as foundational areas. The DDDAS book series aims to be a reference source of many of the important research and development efforts conducted under the rubric of DDDAS, and to also inspire the broader communities of researchers and developers about the potential in their respective areas of interest, of the application and the exploitation of the DDDAS paradigm and the ensuing frameworks, through the examples and case studies presented, either within their own field or other fields of study. As in the first volume, the chapters in this book reflect research work conducted over the years starting in the 1990’s to the present. Here, the theory and application content are considered for: Foundational Methods Materials Systems Structural Systems Energy Systems Environmental Systems: Domain Assessment & Adverse Conditions/Wildfires Surveillance Systems Space Awareness Systems Healthcare Systems Decision Support Systems Cyber Security Systems Design of Computer Systems The readers of this book series will benefit from DDDAS theory advances such as object estimation, information fusion, and sensor management. The increased interest in Artificial Intelligence (AI), Machine Learning and Neural Networks (NN) provides opportunities for DDDAS-based methods to show the key role DDDAS plays in enabling AI capabilities; address challenges that ML-alone does not, and also show how ML in combination with DDDAS-based methods can deliver the advanced capabilities sought; likewise, infusion of DDDAS-like approaches in NN-methods strengthens such methods. Moreover, the “DDDAS-based Digital Twin” or “Dynamic Digital Twin”, goes beyond the traditional DT notion where the model and the physical system are viewed side-by-side in a static way, to a paradigm where the model dynamically interacts with the physical system through its instrumentation, (per the DDDAS feed-back control loop between model and instrumentation).

21st Century Challenges in Chemical Crystallography I D. Michael P. Mingos,Paul R. Raithby,2021-01-20 This volume summarises recent developments and possible future directions for small molecule X-ray crystallography. It reviews specific areas of crystallography which are rapidly developing and places them in a historical context. The interdisciplinary nature of the technique is emphasised throughout. It introduces and describes the chemical crystallographic and synchrotron facilities which have been at the cutting edge of the subject in recent decades. The introduction of new computer-based algorithms has proved to be very influential and stimulated and accelerated the growth of new areas of science. The challenges which will arise from the acquisition of ever larger databases are considered and the potential impact of artificial intelligence techniques stressed. Recent advances in the refinement and analysis of X-ray crystal structures are highlighted. In addition the recent developments in time resolved single crystal X-ray crystallography are discussed. Recent years have demonstrated how this technique has provided important mechanistic information on solid-state reactions and complements information from traditional spectroscopic measurements. The volume highlights how the prospect of being able to routinely “watch” chemical processes as they occur provides an exciting possibility for the future. Recent advances in X-ray sources and detectors that have also

contributed to the possibility of dynamic single-crystal X-ray diffraction methods are presented. The coupling of crystallography and quantum chemical calculations provides detailed information about electron distributions in crystals and has resulted in a more detailed understanding of chemical bonding. The volume will be of interest to chemists and crystallographers with an interest in the synthesis, characterisation and physical and catalytic properties of solid-state materials. Postgraduate students entering the field will benefit from a historical introduction to the subject and a description of those techniques which are currently used. Since X-ray crystallography is used so widely in modern chemistry it will serve to alert senior chemists to those developments which will become routine in coming decades. It will also be of interest to the broad community of computational chemists who study chemical systems.

Phonetic Search Methods for Large Speech Databases Ami Moyal,Vered Aharonson,Ella Tetariy,Michal Gishri,2013-02-28 “Phonetic Search Methods for Large Databases” focuses on Keyword Spotting (KWS) within large speech databases. The brief will begin by outlining the challenges associated with Keyword Spotting within large speech databases using dynamic keyword vocabularies. It will then continue by highlighting the various market segments in need of KWS solutions, as well as, the specific requirements of each market segment. The work also includes a detailed description of the complexity of the task and the different methods that are used, including the advantages and disadvantages of each method and an in-depth comparison. The main focus will be on the Phonetic Search method and its efficient implementation. This will include a literature review of the various methods used for the efficient implementation of Phonetic Search Keyword Spotting, with an emphasis on the authors’ own research which entails a comparative analysis of the Phonetic Search method which includes algorithmic details. This brief is useful for researchers and developers in academia and industry from the fields of speech processing and speech recognition, specifically Keyword Spotting.

Forensic Geoscience Kenneth Pye,Debra J. Croft,2004 Forensic geoscience is an increasingly important sub-discipline within geoscience and forensic science. Although minerals, soils, dusts and rock fragments have been used as only begun to be recognized in the last ten years or so. The police and other investigative bodies are keen to encourage such developments in the fight against crime, particularly since many criminals show a high level of forensic awareness with regard to evidence such as fingerprints, blood and other body fluids. The papers in this volume illustrate some of the main principles, techniques and applications in current forensic geoscience, covering research and casework in the UK and internationally. The techniques described range from macro-scale field geophysical investigations to micro-scale laboratory studies of the chemical and textural properties of individual particles. In addition to forensic applications, many of these techniques have broad utility in geological, geomorphological, soil science and archaeological research.

1995 W. Joseph Campbell,2015-01-02 A hinge moment in recent American history, 1995 was an exceptional year. Drawing on interviews, oral histories, memoirs, archival collections, and news reports, W. Joseph Campbell presents a vivid, detail-rich portrait of those memorable twelve months. This book offers fresh interpretations of the decisive moments of 1995, including the emergence of the Internet and the World Wide Web in mainstream American life; the bombing at Oklahoma City, the deadliest attack of domestic terrorism in U.S. history; the sensational Trial of the Century, at which O.J. Simpson faced charges of double murder; the U.S.-brokered negotiations at Dayton, Ohio, which ended the Bosnian War, Europe’s most vicious conflict since the Nazi era; and the first encounters at the White House between Bill Clinton and Monica Lewinsky, a liaison that culminated in a stunning scandal and the spectacle of the president’s impeachment and trial. As Campbell demonstrates in this absorbing chronicle, 1995 was a year of extraordinary events, a watershed at the turn of the millennium. The effects of that pivotal year reverberate still, marking the close of one century and the dawning of another.
