**Aristotle's Meteorology and its Reception in the Arab World** Paul Lettinck,2021-10-25 An account of what Arabic scholars have written, either as commentators or as more independent authors, on the subjects treated in Aristotle's Meteorology, this work investigates how they were influenced by one another and by previous Greek commentators. For each subject a survey is given of the content of the Greek commentaries (by Alexander, Philoponus and Olympiodorus) as well as of a later treatise, ascribed to Olympiodorus and extant only in Arabic. Then, the Arabic version of Ibn al-Bitrīq is investigated; it was one of the sources used by the Arabic writers which are discussed after that: al-Kindī, Ibn Sīnā and later scholars who were inspired by him, Ibn Bājja and Ibn Rušd. Two Arabic treatises on subjects from the Meteorology are edited and translated.

*Meteor I vs V1 Flying Bomb* Donald Nijboer,2012-10-20 A total of 10,500 missiles were launched as part of the V1 attack, of which 3,957 were destroyed by the defences. Indeed, it could have been much worse, for by the end of the war the Germans had manufactured close to 32,000 flying bombs. The defences put forward to guard against the V1 were formidable – 23,000 men and women with their guns, radar and communications networks were installed on coastal sites. Squadrons of Britain's newest Spitfires, the F XIVs, and Hawker Tempest Vs were kept at home to battle the new menace. Rushed into action in July 1944 to help counter the V1 threat, Britain's Gloster Meteor I was the first jet fighter to enter RAF service. On 4 August the Meteor scored its first V1 victory. Having just closed in on a flying bomb, its officer squeezed the trigger but his guns jammed. Using the Meteor's superior speed, he was able to overtake the missile and, using his wing tip, he tipped the craft over and sent it crashing into the ground. The interceptions between the V1 and Britain's Gloster Meteor were historic, and ushered in a new era of aerial combat.

*Infrasound Monitoring for Atmospheric Studies* Alexis Le Pichon, Elisabeth Blanc, Alain Hauchecorne,2018-10-26 Since the publication of the first volume “Infrasound monitoring for atmospheric studies” published in 2010, significant advances were achieved in the fields of engineering, propagation modelling, and atmospheric remote sensing methods. The global infrasound network, which consists of the International Monitoring Network (IMS) for nuclear test ban verification completed by an increasing number of regional cluster arrays deployed around the globe, has evidenced an unprecedented potential for detecting, locating and characterizing various natural and man-made sources. In recent years, infrasound has evolved into a broad interdisciplinary field encompassing academic disciplines of geophysics and innovative technical and scientific developments. The advances in innovative ground-based instruments, including infrasound inversions for continuous observations of the stratosphere and mesosphere, provide useful insights into the geophysical source phenomenology and atmospheric processes involved. Systematic investigations into low-frequency infrasound signals and the development of complementary observational platforms point out new insights into the dynamics of the middle atmosphere which play a significant role in both tropospheric weather and climate. This monitoring system also provides continuous relevant information about natural hazards with high societal benefits, like on-going volcanic eruptions, surface earthquakes, meteorites or severe weather. With this new edition, researchers and students benefit from a comprehensive content of both fundamental and applied inter-disciplinary topics.

Meteor Showers and Their Parent Comets Petrus Matheus Marie Jenniskens,2006-09-14 Publisher description

Atlas of Earth's Meteor Showers Peter Jenniskens,2023-10-31 Atlas of Earth's Meteor Showers includes some 440 celestial maps and charts that plot the position of over 500 specific meteor showers observable on Earth throughout the year. Maps include both the visible showers detected by video cameras as well as showers detected by radar, and show unusual periodic showers. Shower descriptions are provided via a standard template

for quick reference, which includes information on shower IAU number and code, shower name, type of shower (annual or periodic), dynamical type (short or long period), years of past outbursts, date of maximum, period of activity, radiant and radiant drift, geocentric speed, orbital elements, particle size distribution index, beginning altitude and lightcurve shape of the meteors, meteoroid densities, spectroscopic elemental abundances, estimated age, and parent body. In addition, a brief history is provided that details the shower's discovery and subsequent observations with references to the literature. With the sheer number of known meteor showers and the difficulty of using online resources to confirm new detections, understanding what showers are active on a given date, and reviewing where we are with understanding their parent body and dynamical history, this book is an invaluable resource to astronomers and researchers of the Solar System as well as to amateur astronomers who contributed much of the data presented here. *Atlas of Earth's Meteor Showers* provides postgraduates, academics, researchers and professionals in space and planetary science with information they require on the meteor showers and meteoroid streams observed in our Solar System. Presents approximately 400 detailed meteor shower maps that show what showers are active on a given night for visual, video, and radar observers. Provides thorough descriptions of each shower that can be used in planetary astronomy and for meteor observing sessions, the discovery of new showers, and planetary defense. Highlights periodic, unusual showers that may be expected on a given night based on past occurrences that are important to satellite hazard avoidance and meteor storm chasing.

**Discovering the Essential Universe** Neil F. Comins, 2012-01-04 *Discovering the Universe, Fifth Edition* is one of the briefest texts available for an introductory astronomy course, while providing the wide range of factual topics that are the hallmark of the text and are consistent with most course needs. By flipping through the book, readers will find it as rich in celestial images and figures as other textbooks for the same audience. It is a balanced approach to content, depth, and breath, with effective teaching resources. It is also up-to-date, reflecting how our knowledge about the universe is expanding at a phenomenal rate.

*The Wreck of the Faithful Steward on Delaware's False Cape* Michael Dougherty, 2023-04-24 On the first of September 1785, with night coming on and the weather deteriorating, the crew of the ship *Faithful Steward* sailed toward Delaware's notorious False Cape. In the summer of 1785, a group of Irish migrants took to the Atlantic to escape the abuse and persecution of the ruling classes at home. They sought a new life in the United States, a place where the banner of freedom waved proudly and every good was possessed. Their ship was new and sturdy, and its captain had a good reputation. On this voyage, however, it was overloaded with migrant families and a massive cargo of counterfeit coins. By the first of September the ship was lost, somewhere off the mid-Atlantic coast. Michael Timothy Dougherty tells the story of the wreck and the people on board.

**Radionuclides in the Study of Marine Processes** P.J. Kershaw, D.S. Woodhead, 2012-12-06 The Norwich Symposium, 'Radionuclides in the Study of Marine Processes', is a sequel to the very successful conference held at Cherbourg, France in June 1987. The international character of the meeting has been maintained with thirty-eight contributions, from seventeen countries, being accepted for oral presentation. For many years, the radioactive properties of the naturally occurring radionuclides have been used to determine their distributions in the marine environment and, more generally, to gain an understanding of the dynamic processes which control their behaviour in attaining these distributions. More recently the inputs from human activities of both natural and artificial (i.e. man-made) radionuclides have provided additional opportunities for the study of marine processes on local, regional and global scales. Because the sources of artificial radionuclides are often reasonably well defined in space and time, and because a wider range of elements is represented, new viewpoints for the study of processes have become available. Although it is outside the scope of this Symposium, it must be acknowledged that the radiological protection requirements for radioactive waste disposal practices to be based on a sound scientific understanding of radionuclide behaviour in the sea have also provided a very strong impetus for the studies.

**Rosetta: The Remarkable Story of Europe's Comet Explorer** Peter Bond,2020-12-17 In 2014, Rosetta became the first mission to orbit a comet and to deploy a lander onto its surface. This is the story of ESA's pioneering comet explorer, following the mission from its initial inception to its historic touchdown. Read along as the Rosetta orbiter and its lander, Philae, evolve over the years, overcoming early mission hurdles before embarking on their one-way, decade-long voyage to a comet. See how the saga then culminates with Rosetta and Philae at last unveiling their icy target and achieving an unprecedented touchdown on its surface. Award-winning space writer Peter Bond takes us behind the scenes of this historic endeavor, sharing insights from the international team of scientists and engineers who made the mission possible, describing the remarkable technology that they created, and delving into the treasure trove of scientific discoveries that followed. Recounting in vivid detail the inner workings of Rosetta, this book is a celebration of the mission that has left a lasting impact on planetary science and space exploration.

Comets And Their Origin Uwe Meierhenrich,2015-02-09 Divided into two parts, the first four chapters of Comets and their Origin refer to comets and their formation in general, describing cometary missions, comet remote observations, astrochemistry, artificial comets, and the chirality phenomenon. The second part covers the cometary ROSETTA mission, its launch, journey, scientific objectives, and instrumentations, as well as the landing scenario on a cometary nucleus. Along the way, the author presents general questions concerning the origin of terrestrial water and the molecular beginnings of life on Earth, as well as how the instruments used on a space mission like ROSETTA can help answer them. The text concludes with a chapter on what scientists expect from the ROSETTA mission and how its data will influence our life on Earth. As a result, the author elucidates highly topical and fascinating knowledge to scientists and students of various scientific backgrounds, allowing them to work with ROSETTA's data.
