Defence from Floods and Floodplain Management John Gardiner,Odon Starosolszky,V. Yevjevich,2012-12-06 Defence from Floods and Floodplain Management discusses all aspects of floodplain management related to defence from floods, including specific issues such as the maintenance of flood defences, and reveals many aspects of a more holistic approach to the management of flood risk, expanding the structural/non-structural debate into prevention and cure in the floodplain and its catchment. Recent experience in many countries is recounted by experts from Hungary, Austria, Greece, Italy, the Netherlands, Portugal, the UK and the USA.

Analysis of Magnetotelluric Micropulsations at Widely Separated Stations Roy L. Komack,1964 An investigation of ultra low frequency electromagnetic signals known as magnetotelluric micropulsations was made. The electric field strength at the earth's surface was measured by means of electrodes placed in the ground. Analog paper chart records of these signals were made at Trinidad, B.W.I., Puerto Rico, and Austin, Texas. These records were later hand-digitized. The power spectra of the signals at each station were computed for a data sample three quarters of an hour long. Certain power spectral peaks in the frequency range from .01 cps to .25 cps were noted. Several previously undiscovered regularities in the spectra of this sample were found. Power spectral peaks occurred at .05, .125, .175, and .225 cps. Also computed were coherencies between signals at all stations. Coherencies above .8 were found between signals recorded at stations more than 2,000 miles apart. The regular features found in the power spectra were also noted in the coherencies. In addition, some spectral line splitting was not obvious in the power spectra appeared in the coherencies. From the evidence presented it is concluded that certain frequency bands of micropulsations are simultaneous over great distances, and probably originate in the outer atmosphere. (Author).

Microwave and RF Product Applications Mike Golio,2003-06-27 The field of microwave engineering has undergone a radical transformation in recent years, as commercial wireless endeavors overtook defense and government work. The modern microwave and RF engineer must be knowledgeable about customer expectations, market trends, manufacturing technologies, and factory models to a degree that is unprecedented. Unfortunately, most of the available literature does not reflect this fact, but remains focused on high-performance, low-volume applications. Microwave and RF Product Applications helps resolve that deficiency. Editor Mike Golio culled its chapters from his bestselling RF and Microwave Handbook, incorporated critical updates contributed by the original authors, and organized the chapters into a practical, tightly focused reference. A complete table of contents at the front of the text makes finding specific answers quick and easy, and detailed lists of references in each chapter provide convenient access to the relevant expert literature. For engineers in industry, government, or academia, Microwave and RF Product Applications provides insight and information that may be outside their area of expertise. For managers, marketers, and technical support personnel, it builds a better understanding of the fields that drive and are affected by their decisions.

The Uzi Submachine Gun Chris McNab,2011-11-20 The Uzi submachine gun is one of the most recognizable weapons in history. Its familiarity stems in part from the sheer diversity of its users. Uzis have been seen being wielded and fired by US Secret Service agents and SWAT teams, Israeli soldiers, European special-forces, as well as criminals and terrorists the world over. The reasons they use the Uzi are simple – it provides devastating close-range firepower in a reliable, highly compact weapon. Weapon: The Uzi Submachine Gun tells the story of this unique weapon. It not only explores the gun's technical development and specifications, but also describes the and analyzes Uzi's combat use in a wide range of contexts, from Israeli soldiers battling on the Golan Heights in 1967, through to modern pirates operating off the coast of Somalia. This book presents the facts and challenges the myths surrounding this remarkable weapon.

Disruptive Technology and Defence Innovation Ecosystems Pierre Barbaroux,2019-07-10 Recent advances in the disciplines of computer science (e.g., quantum theory, artificial intelligence), biotechnology and nanotechnology have deeply modified the structures of knowledge from which military capabilities are likely to develop. This book discusses the implications of disruptive technologies for the defence innovation ecosystem. Two complementary dimensions of the defence innovation ecosystem are highlighted: the industrial and intra-organizational. On the industrial scale, there is a shift in the ecology of knowledge underpinning the defence industrial and technological base (DITB). At the intra-organizational level, it is the actors' practices that change and, through them, their skills and the processes by which they are acquired and transferred. In this context, the sources and legitimacy of innovation are being transformed, in turn requiring sometimes radical adaptations on the part of the various actors, including companies, military services, research communities and governmental agencies, which make up the defence innovation ecosystem.
