Application Administrators Handbook Kelly C Bourne,2013-09-16 An application administrator installs, updates, optimizes, debugs and otherwise maintains computer applications for an organization. In most cases, these applications have been licensed from a third party, but they may have been developed internally. It provides detailed, hands-on instructions on how to perform many specific tasks that an application administrator must be able to handle. Social Media in Clinical Practice Bertalan Meskó,2013-07-22 The number of patients using social media and the number of applications and solutions used by medical professionals online have been sky-rocketing in the past few years, therefore the rational behind creating a well-designed, clear and tight handbook of practical examples and case studies with simple pieces of suggestions about different social media platforms is evident. While the number of e-patients is rising, the number of web-savvy doctors who can meet the expectations of these new generations of patients is not, this huge gap can only be closed by providing medical professionals with easily implementable, useful and primarily practical pieces of advice and suggestions about how they should use these tools or at least what they should know about these, so then when an e-patient has an internet-related question, they will know how to respond properly. As all medical professionals regardless of their medical specialties will meet e-patients, this issue with growing importance will affect every medical professionals which means there is a huge need for such a easily understandable handbook.

Technologies and Practices for Constructing Knowledge in Online Environments: Advancements in Learning discusses how aspects of technology can facilitate and provide advancements in e-collaborative knowledge construction. This reference collection gives an impression about scenarios of e-collaborative knowledge construction and the technology applied in these scenarios while focusing on technologies that enable collaborative knowledge construction processes and how they can be framed to support e-collaborative knowledge

construction.
