Financial Strategies in Competitive Markets Hasan Dinçer, Serhat Yüksel, 2021-04-13 As globalization continues to rapidly evolve, economic borders between countries have practically disappeared. One effect is that nowadays companies can access new markets by investing in other countries. This offers an important advantage especially for international and large-scale companies. However, one result is the increased market competition. Small-scale local firms and SMEs have to compete with international firms and

corporations that have significantly more resources. This competitive environment jeopardizes the sustainability of the smaller companies, which often are driven out of business by the more powerful global players. This book discusses financial strategies for small and middle size companies to increase their competitiveness in the global markets.

Salvation Lost Peter F. Hamilton, 2019-10-29 All the best in humanity rises to meet a powerful alien threat in the sequel to Salvation-part of an all-new trilogy from "the owner of the most powerful imagination in science fiction" (Ken Follett). The comparative utopia of twenty-third-century Earth is about to go dreadfully awry when a seemingly benign alien race is abruptly revealed

to be one of the worst threats humanity has ever faced. Driven by an intense religious extremism, the Olyix are determined to bring everyone to their version of God as they see it. But they may have met their match in humanity, who are not about to go gently into that good night or spend the rest of their days cowering in hiding. As human ingenuity and determination rise to the challenge, collective humanity has only one goal—to wipe this apparently undefeatable enemy from the face of creation. Even if it means playing a ridiculously long game indeed. But in a chaotic universe, it is hard to plan for every eventuality, and it is always darkest before the dawn.

Small-scale Aquaponic Food Production Christopher Somerville, Food and Agriculture Organization of the United Nations, 2015 This technical paper begins by introducing the concept of aquaponics, including a brief history of its development and its place within the larger category of soil-less culture and modern agriculture. It discusses the main theoretical concepts of aquaponics, including the nitrogen cycle and the nitrification process, the role of bacteria, and the concept of balancing an aquaponic unit. It then moves on to cover important considerations of water quality parameters, water testing, and water sourcing for aquaponics, as well as methods and theories of unit design, including the three main methods of aquaponic systems: media beds, nutrient film technique, and deep water culture. The publication discusses in detail the three groups of living organisms (bacteria, plants and fish) that make up the aquaponic ecosystem. It also presents management strategies and troubleshooting practices, as well as related topics, specifically highlighting local and sustainable sources of aquaponic inputs. The publication also includes nine appendixes that present other key topics: ideal conditions for common plants grown in aquaponics; chemical and biological controls of common pests and diseases including a compatible planting guide; common fish diseases and related symptoms, causes and remedies; tools to calculate the ammonia produced and biofiltration media required for a certain fish stocking density and amount of fish feed added; production of homemade fish feed; guidelines and considerations for establishing aquaponic units; a cost-benefit analysis of a small-scale, media bed aquaponic unit; a comprehensive guide to building small-scale versions of each of the three aquaponic methods; and a brief summary of this publication designed as a supplemental handout for outreach, extension and education.
