The Last Century of Sea Power, Volume 2 H. P.

Willmott,2010-03-22 “An important contribution . . . a thoughtful account of the years preceding the Second World War and, at much greater length, of the war itself.” —History In this second volume of his history of naval power in the 20th century, H. P.

Willmott follows the fortunes of the established seafaring nations of Europe along with two upstarts—the United States and Japan.

Emerging from World War I in command of the seas, Great Britain saw its supremacy weakened through neglect and in the face of more committed rivals. Britain’s grand Coronation Review of 1937 marked the apotheosis of a sea power slipping into decline.

Meanwhile, Britain’s rivals and soon-to-be enemies were embarking on significant naval building programs that would soon

change the nature of war at sea in ways that neither they nor their rivals anticipated. By the end of a new world war, the United States had taken command of two oceans, having placed its industrial might behind technologies that further defined the arena of naval power above and below the waves, where stealth and the ability to strike at great distance would soon rewrite the rules of war and of peace. This splendid volume further enhances Willmott's stature as the dean of naval historians. Praise for The Last Century of Sea Power series "The author, dean of naval historians, provides a sweeping look at, and analysis of, the transformation of naval power . . . Willmott is fearless in his judgments." —Seapower "H. P. Willmott is the finest naval historian and among the finest historians of any discipline writing today." —Bernard D. Cole, author of The Great Wall at Sea

*Minesweeper (Special Forces, Book 2)* Chris

Lynch, 2019-12-03 All the sizzle, chaos, noise and scariness of war is clay in the hands of ace storyteller Lynch. -- Kirkus Reviews for the World War II series Discover the secret missions behind America's greatest conflicts. Fergus Frew thought he knew what to expect when he signed up with the Navy's demolitions team. But as the Korean War rages on, Fergus and his fellow divers -- AKA

frogmen -- are tasked with more than just scouting mudflats. Soon they're planting mines. And sabotaging tunnels, bridges... and even fishing nets. Strangest of all, it falls to Fergus to transport a spy into the country -- and that means traveling far from Navy-controlled waters. But frogmen are amphibious. And Fergus may not realize it, but he's in a position to change the way the whole world thinks about combat. National Book Award finalist Chris Lynch continues his explosive fiction series based on the real-life, top-secret history of US black ops and today's heroic Navy SEALs.

**Warships of the Soviet Fleets, 1939–1945** Przemyslaw Budzbon, Jan Radziemski, Marek Twardowski, 2023-07-30 Seventy-five years after the end of the Second World War the details of Soviet ships, their activities and fates remain an enigma to the West. In wartime such information was classified and after a brief period of glasnost ('openness') the Russian state has again restricted access to historical archives. Therefore, the value – and originality – of this work is difficult to exaggerate. It sees the first publication of reliable data on both the seagoing fleets and riverine flotillas of the Soviet Navy, listing over 6200 vessels from battleships to river gunboats, and mercantile conversions as well as purpose-built warships. This third and final part of the series

includes all the ships in naval service that were not frontline fighting vessels. Despite auxiliary status, these were not insignificant ships – indeed the icebreakers were the largest vessels built by the USSR before the war and carried so much prestige that every leading member of the Soviet regime wanted their name on one. Apart from the obvious fleet support types – oilers, tugs and depot ships – this volume also covers unsung heroes like the salvage fleet, highly significant in the 1930s for generating much-needed foreign currency and later essential to the war effort, allowing so many sunken Soviet warships to be returned to service. Another major feature of this volume is the first clear and comprehensive listing of ex-mercantile transport ships, their periods of service and ultimate fates. Even harbor service craft are included, right down to the humble ‘heaters’ that supplied warmth to icebound warships in the depth of the Russian winters. This volume concludes with a number of important appendices on subjects like weaponry and a massive cross-referenced index that will allow readers to differentiate between ships of the same name and to track every name change. This is undoubtedly one of the most important naval reference works of recent years and will be welcomed by anyone with an interest in warships, the Soviet Navy

or wider maritime aspects of the Second World War. Furthermore, as recent Russian actions appear to revive Soviet-era aspirations, this book offers both new insights and valuable background of contemporary relevance.

A Compendium of Armaments and Military Hardware  
(Routledge Revivals) Christopher Chant,2014-06-03 First published in 1987, The Compendium of Armaments and Military Hardware provides, within a single volume, the salient technical and operational details of the most important weapons. The complete range of hardware used in land, sea and air forces throughout the world at the time of publication is covered, from tanks to rocket systems, helicopters to cruise missiles, alongside full details of size, weight and operational range. The book's main strength lies in the detail it gives of armament and associated ammunition capabilities, and of the sensors and other electronics required for the weapons to be used effectively. A key title amongst Routledge

reference reissues, Christopher Chant's important work will be of great value to students and professionals requiring a comprehensive and accessible reference guide, as well as to weapons 'buffs'.

*The Navy of World War II, 1922-1947* Paul

Silverstone, 2012-09-10 *The Navy of World War II, 1922-1946* comprehensively covers the vessels that defined this momentous 24-year period in U.S. naval history. Beginning with the lean, pared-down navy created by the treaty at the Washington Naval Conference, and ending with the massive, awe-inspiring fleets that led the Allies to victory in the Second World War, the fourth volume in the celebrated U.S. Navy Warship series presents a detailed guide to all the warships that exhibited the might of the U.S. Navy to the fullest. Showcasing all the ships—both the famous and the often overlooked—that propelled the U.S. Navy to prominence in the first half of the twentieth century, *The Navy of World War II* catalogues all the warships from this era, including those that did battle in the European, Mediterranean, and Pacific Theaters from 1941-1946. From the fleet attacked at Pearl Harbor, to those that fought valiantly in the Battle of the Guadalcanal, to the official surrender of the Japanese on the deck of the USS Missouri, this

latest volume is the definitive guide to the warships that defined this pivotal period in U.S. naval history. Each volume in the U.S. Navy Warship series represents the most meticulous scholarship for its particular era, providing an authoritative account of every ship in the history of the U. S. Navy from its first incarnation as the Continental Navy to its present position as one of the world's most formidable naval superpowers. Featuring convenient, easy-to-read tabular lists, every book in the series includes an abundance of illustrations, some never before published, along with figures for actions fought, damages sustained, casualties suffered, prizes taken, and ships sunk, ultimately making the series an indispensable reference tool for maritime buffs and military historians alike. *Transition to Eminence* G. M. Hiranandani,2005 This volume of the navy's history covers the period from 1976 to 1990. It examines the navy's success in keeping abreast of advances in technology in step with progressive self-reliance. In a decade and a half of innovation, the navy equipped its indigenously built frigates, corvettes, and other vessels with combinations of the latest available weapons and equipment from the Soviet Union, from Europe, and from indigenous sources. A tiny ship design cell, which in 1965 was designing yard craft, was by 1990 designing an aircraft carrier, submarines, and missile destroyers. The new acquisitions from the Soviet Union ranged from missile destroyers, conventional submarines, and long-range reconnaissance aircraft, to minesweepers. All these high-tech inductions needed to be operated and manned by better-educated and better-trained personnel. New maintenance, repair, and refit facilities had to be

created. The increase in the volume of spares and the diversity of sources compelled modernization of the logistics system. This volume analyzes how these problems were tackled.
