Java 3D Programming Daniel Selman,2002 Java 3D Programming steps programmers through the important design and implementation phases of developing a successful Java 3D application. The book provides invaluable guidance on whether to use Java 3D, user interface design, geometry creation, scene manipulation and final optimizations. The book does not attempt to exhaustively cover the API or replicate the official documentation but rather serves as a roadmap to alert programmers of design issues and potential pitfalls. The author distills 12 months of using the Java 3D API for commercial projects, as well as innumerable discussions on the Java 3D email list into a book that all Java 3D developers will appreciate. Experienced Java 3D developers will applaud an authoritative resource containing the state-of-the-art in techniques and workarounds, while novice Java 3D programmers will gain a fast-track into Java 3D development, avoiding the confusion, frustration and time wasted learning Java 3D techniques and terminology. Java 3D Programming comes complete with a comprehensive set of programming examples to illustrate the techniques, features, workarounds and bug fixes contained in the main text. Readers of this book would include students and postgraduate researchers developing visualization applications for academia. Moderately experienced in Java, some experience of 3D graphics, little or no experience of Java 3D is needed. R+D s/w engineers at commercial institutions. Experienced Java developers, experienced with OpenGL or VRML, little or no experience with Java 3D.

Design First for 3D Artists Geoffrey Kater,2005-11-30 Working on a project for most 3D artists means hitting the keyboard first without ever touching a pencil. But in the world of animation, the pencil is revered as the most powerful tool in the animation process, because it directly addresses the design aesthetic of an animated project. Production design is the process by which an artist establishes the tone for a particular film by offering a unique aesthetic vision that is in support of the story. As a 3D artist, to overlook design is to overlook the fundamental process that greatly influences not only the film itself but also your contributions as a professional. To combine the disciplines of traditional design and 3D animation is a choice that only you can make. The result of this choice is a broader artistic skill set that increases your creativity and consequently increases your worth as a professional. Plain and simple, Design First for 3D Artists is going to teach you easy-to-use design techniques that will make you a better designer and increase your worth as a 3D artist.

X3D Don Brutzman,Leonard Daly,2010-07-19 In the early days of the Web a need was recognized for a language to display 3D objects through a browser. An HTML-like language, VRML, was proposed in 1994 and became the standard for describing interactive 3D objects and worlds on the Web. 3D Web courses were started, several best-selling books were published, and VRML continues to be used today. However VRML, because it was based on HTML, is a stodgy language that is not easy to incorporate with other applications and has been difficult to add features to. Meanwhile, applications for interactive 3D graphics have been exploding in areas such as medicine, science, industry, and entertainment. There is a strong need for a set of modern Web-based technologies, applied within a standard extensible framework, to enable a new generation of modeling & simulation applications to emerge, develop, and interoperate. X3D is the next generation open standard for 3D on the web. It is the result of several years of development by the Web 3D Consortium's X3D Task Group. Instead of a large monolithic specification (like VRML), which requires full adoption for compliance, X3D is a component-based architecture that can support applications ranging from a simple non-interactive animation to the latest streaming or rendering applications. X3D replaces VRML, but also provides compatibility with existing VRML content and browsers. Don Brutzman organized the first symposium on VRML and is playing a similar role with X3D; he is a founding member of the consortium. Len Daly is a professional member of the consortium and both Len and Don have been involved with the development of the standard from the start. The first book on the new way to present interactive 3D content over the Web, written by two of the designers of the standard Plentiful illustrations and screen shots in the full color text Companion website with extensive content, including the X3D specification, sample code and applications, content creation tools, and demos of compatible Web browsers
