M-libraries Mohamed Ally, Gill Needham, 2008 Mobile Phone Ownership is considerably more ubiquitous than internet access via personal computers: more and more people around the world are carrying a tiny mobile device of some kind in their pocket or handbag. The environment in which people find and use information is changing - we are busier, we are constantly on the move and whether we are shopping, booking a holiday or looking for train times we expect instant results. What does all this mean for libraries? The development of networked technologies opened up huge opportunities for libraries to make their resources and services accessible to their users regardless of distance. The opportunity to deliver these to users via their mobile phones, PDAs and other handheld devices will be as significant a challenge. Indeed, if libraries choose to ignore this challenge, they are in danger of being left behind in an increasingly competitive world of information provision and services. This authoritative collection of contributions from experts in the field, based on the First International M-Libraries Conference, explores the technical and social context for m-libraries, describes a range of global initiatives with lessons learned, and discusses the potential for future development.--BOOK JACKET.

Shut Off Gregory Taylor, 2013 Digital technology has revolutionized modern television but what exactly has changed? The history of the digital transition is one of great scientific achievement, expensive failures, and significant political and industrial power struggles. In *Shut Off: The Canadian Digital Television Transition*, Gregory Taylor examines the technology, institutional players, and the policies that have shaped Canada's efforts to switch from analogue to digital television broadcasting. Taylor shows how digital television is part of a global media movement by comparing the Canadian experience with the ways in which the digital transition has been managed worldwide. *Shut*

Off is about more than television - the digital transition is also a precursor for new developments in mobile digital media. The wireless spectrum freed by the move to digital television is a multi-billion dollar public resource, whose auction is impending. The book reveals how digital broadcasting has been the site of dramatic change in the political economy of Canadian media, and questions the market-driven process through which the still incomplete transition has unfolded. Considering wide-ranging issues such as equal access and television as a public good, Taylor highlights public and institutional actors in the policy process to provide an analysis of government and industry. Succinct and insightful, *Shut Off* is a timely assessment of a period of technological and economic upheaval in Canadian broadcasting.
