Norman Bel Geddes Nicolas P. Maffei,2018-02-22 Norman Bel Geddes has long been considered the 'founder' of American industrial design. During his long career he worked on everything from theatre design, world fairs and cars to houses and product and packaging design. Nicolas P. Maffei's magisterial biography draws on original material from the archive at the Harry Ransom Center, University of Texas at Austin, and places Bel Geddes' work within the fast-changing cultural and intellectual contexts of his time. Maffei shows how Bel Geddes' futuristic but pragmatic style - his notion of 'practical vision' - was central to his work, and highly influential on the professional practice of American industrial design in general.

Environmental Modelling Jo Smith,Pete Smith,2007-01-18 The global environment is a complex mix of interlinked processes, about which observation can tell us a great deal. This book shows how modelling can be used to explain experimental observations, and how these observations - and data gathered - can be extrapolated to explain novel situations. It also illustrates how models are actively applied.

The Enterprise Ncc 1701 and the Model Maker N. Datin McDonald,2015-11-17 The Star Trek Enterprise Model NCC 1701 began its journey in 1964 in my father's model shop, most of us had our first sighting of it in 1966 when it flew across our TV screen. No other cinematic vessel is nearly as famous and is still the most recognized and successful starship in history. It was donated by Paramount Studios to the National Air and Space Museum in Washington DC, where it will once again be on display for all its fans to view, in the summer of 2016. From Gene Roddenberry's imagination to Matt Jefferies' ability to draw what was in Gene's head, to the Howard Anderson Co. for special effects, to my father's ability to read, decipher and construct from those blueprint plans to what we see today, my father had a wonderfully specialized talent and this is his story to tell.

Model-making David Neat,2013-12-21 Model-making: Materials and Methods focuses primarily on the wide variety of materials that can be employed to make models; those which have been favoured for a while and those which are relatively new. The book looks at how these materials behave and how to get the best out of them, then illustrates a range of relatively simple methods of building, shaping, modelling, surfacing and painting with them. Useful features of the book include: the different uses of models in various disciplines; the sequence of making; planning and construction, creating surfaces, painting and finishing; methods of casting, modelling and working with metals; step-by-step accounts of the making of specially selected examples; simple techniques without the need for expensive tools or workshop facilities; a 'Directory' of a full range of materials, together with an extensive list of suppliers. This book is intended for students of theatre production, art & architecture, animation and theatre/television set designers where accurate scale models are necessary, and is also of interest to anyone involved with the process of making forms in 3D and the challenge of making small-scale forms in general. Superbly illustrated with 185 colour photographs.
