Geographic Citizen Science Design Artemis Skarlatidou,Muki Haklay,2021-02-04 Little did Isaac Newton, Charles Darwin and other 'gentlemen scientists' know, when they were making their scientific discoveries, that some centuries later they would inspire a new field of scientific practice and innovation, called citizen science. The current growth and availability of citizen science projects and relevant applications to support citizen involvement is massive; every citizen has an opportunity to become a scientist and contribute to a scientific discipline, without having any professional qualifications. With geographic interfaces being the common approach to support collection, analysis and dissemination of data contributed by participants, 'geographic citizen science' is being approached from different angles. Geographic Citizen Science Design takes an anthropological and Human-Computer Interaction (HCI) stance to provide the theoretical and methodological foundations to support the design, development and evaluation of citizen science projects and their user-friendly applications. Through a careful selection of case studies in the urban and non-urban contexts of the Global North and South, the

chapters provide insights into the design and interaction barriers, as well as on the lessons learned from the engagement of a diverse set of participants; for example, literate and non-literate people with a range of technical skills, and with different cultural backgrounds. Looking at the field through the lenses of specific case studies, the book captures the current state of the art in research and development of geographic citizen science and provides critical insight to inform technological innovation and future research in this area.

The Future of Nursing Institute of Medicine,Committee on the Robert Wood Johnson

Foundation Initiative on the Future of Nursing, at the Institute of Medicine, 2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Schizophrenia Neil A. Rector, Neal Stolar, Paul Grant, 2011-03-01

From Aaron T. Beck and colleagues, this is the definitive work on the cognitive model of schizophrenia and its treatment. The volume integrates cognitive-behavioral and biological knowledge into a comprehensive conceptual framework. It examines the origins, development, and

maintenance of key symptom areas: delusions, hallucinations, negative symptoms, and formal thought disorder. Treatment chapters then offer concrete guidance for addressing each type of symptom, complete with case examples and session outlines. Anyone who treats or studies serious mental illness will find a new level of understanding together with theoretically and empirically grounded clinical techniques.

Arctic Climate Impact Assessment - Scientific Report Arctic Climate Impact Assessment, 2005-11-07 The Arctic is now experiencing some of the most rapid and severe climate change on earth. Over the next 100 years, climate change is expected to accelerate, contributing to major physical, ecological, social, and economic changes, many of which have already begun. Changes in arctic climate will also affect the rest of the world through increased global warming and rising sea levels. Arctic Climate Impact Assessment was prepared by an international team of over 300 scientists, experts, and knowledgeable members of indigenous communities. The report has been thoroughly researched, is fully referenced, and provides the first comprehensive evaluation of arctic climate change, changes in ultraviolet radiation and their impacts for the region and for the world. It is illustrated in full color throughout. The results provided the scientific foundations for the ACIA synthesis report - Impacts of a Warming Arctic - published by

Cambridge University Press in 2004.

The Challenge of Cognitive Therapy T. Michael Vallis, Janice L. Howes, Philip C. Miller, 1991-01-31 Cognitive therapy is fast becoming one of the more popular and well respected forms of psychotherapy. In both research and clinical practice, several advantages of cognitive therapy have been identified. Cognitive therapy is structured enough to provide a therapeutic framework for clinicians, as well as a theoretical framework for clinical researchers, yet flexible enough to address an individual's problems in a highly idiosyncratic manner. Accompanying the popularity of cognitive therapy is the expansion of its application beyond the areas in which it was initially developed and validated (the traditional areas of depression and anxiety) to areas where validation has not yet occurred (the nontraditional areas). We strongly believe that such broadening of cognitive therapy should be encouraged, but that conceptual models to guide the therapist and researcher in these areas should be explicated. It is the purpose of this text to provide a conceptual framework for dealing with select, nontraditional populations. The idea and motivation for this text develops from a cognitive therapy interest group in Toronto. All of the authors contributing to this text are involved in this group. We represent a group of cognitive therapists functioning in a variety of diverse settings, including clinical research units, general hospital settings, private or public rehabilitation centers, and private practices. Thus, the diversity of referrals for cognitive therapy within our group is great.

Understanding the Global Energy Crisis Richard A. Simmons, Eugene D. Coyle, 2014-03-15 We are facing a global energy crisis caused by world population growth, an escalating increase in demand, and continued dependence on fossil-based fuels for generation. It is widely accepted that increases in greenhouse gas concentration levels, if

not reversed, will result in major changes to world climate with consequential effects on our society and economy. This is just the kind of intractable problem that Purdue University's Global Policy Research Institute seeks to address in the Purdue Studies in Public Policy series by promoting the engagement between policy makers and experts in fields such as engineering and technology. Major steps forward in the development and use of technology are required. In order to achieve solutions of the required scale and magnitude within a limited timeline, it is essential that engineers be not only technologically-adept but also aware of the wider social and political issues that policy-makers face. Likewise, it is also imperative that policy makers liaise closely with the academic community in order to realize advances. This book is designed to bridge the gap between these two groups, with a particular emphasis on educating the socially-conscious engineers and technologists of the future. In this accessibly-written volume, central issues in global energy are discussed through interdisciplinary dialogue between experts from both North America and Europe. The first section provides an overview of the nature of the global energy crisis approached from historical, political, and sociocultural perspectives. In the second section, expert contributors outline the technology and policy issues facing the development of major conventional and renewable energy sources. The third and final section explores policy and technology challenges and opportunities in the distribution and consumption of energy, in sectors such as transportation and the built environment. The book's epilogue suggests some future scenarios in energy distribution and use.
