Learning Everywhere Chad Udell, 2012-06-18 Once the decision to go mobile has been made in a learning organization, at first glance it may seem as though the hardest decision has been made. Soon after this path is chosen, though, reality sets in. There are a lot of things to consider as you work to build your initial learning content for the many varieties of mobile devices. From strategy and design, to development, delivery and beyond, every step along the way is crucial to your success. In *Learning Everywhere*, Chad Udell, a seasoned expert on mobile learning, demystifies the many choices involved in developing mobile learning content, and provides real-world experience on how to get down to the business of creating mobile learning. With an approachable and down to earth style, Chad gives the reader a wealth of detail. His goal is to explain mobile design and development to learning professionals in the context of creating best-of-breed mobile experiences, while leveraging superior user interface design and development techniques. A framework of four content types gives instructional designers, learning developers, and managers a solid grounding in the exciting possibilities for learning using mobile phones, tablets and other devices. Focused

on creating solutions that increase organizational performance no matter the content type or instructional need, this book is truly about Learning Everywhere. Book foreword by Judy Brown, well known mobile learning analyst.

Making Things Talk Tom Igoe, 2011-09-08 Make

microcontrollers, PCs, servers, and smartphones talk to each other. Building electronic projects that interact with the physical world is good fun. But when the devices you've built start to talk to each other, things really get interesting. With 33 easy-to-build projects, *Making Things Talk* shows you how to get your gadgets to communicate with you and your environment. It's perfect for people with little technical training but a lot of interest. Maybe you're a science teacher who wants to show students how to monitor the weather in several locations at once. Or a sculptor looking to stage a room of choreographed mechanical sculptures. In this expanded edition, you'll learn how to form networks of smart devices that share data and respond to commands. Call your home thermostat with a smartphone and change the temperature. Create your own

game controllers that communicate over a network. Use ZigBee, Bluetooth, Infrared, and plain old radio to transmit sensor data wirelessly. Work with Arduino 1.0, Processing, and PHP—three easy-to-use, open source environments. Write programs to send data across the Internet, based on physical activity in your home, office, or backyard. Whether you want to connect simple home sensors to the Internet, or create a device that can interact wirelessly with other gadgets, this book explains exactly what you need.

Fall Prevention Through Design in Construction Imriyas

Kamardeen, 2015-06-05 The role of designers has traditionally been to design a building so that it conforms to accepted local building codes. The safety of workers is left up to the contractor building the designs. Research shows, however, that designers can have an especially strong influence on construction safety during the concept, preliminary and detailed design phases. This book establishes the new knowledge and conceptual frameworks necessary to develop a mobile computing-enabled knowledge management system that can help reduce the high rate of construction falls. There are three main objectives of this book: 1. To create a new Prevention through Design (PtD) knowledge base to model the relationships between fall risks and design decisions; 2. To develop a PtD mobile App to assist building designers in fall prevention through design; 3. To evaluate the practical implications of the PtD mobile App for the construction industry, especially for building designers and workers. The cutting edge technologies explored in this book have the potential to significantly reduce the rate of serious injuries that occur in the global construction industry. This is essential reading for researchers and advanced students of construction management with an interest in safety or

mobile technologies.
