**Synthesis and Applications of Isotopically Labelled Compounds 1997** J. R. Heys, D. G. Melillo, 1998-06-11 *Synthesis and Applications of Isotopically Labelled Compounds* provides a wide-ranging, authoritative and comprehensive coverage of the most recent advances in the synthesis, production and applications of stable and radioactive isotopes. This volume focuses on significant growth areas including applications of isotopes in clinical research and medicine, advances in the analysis of isotopically labelled compounds, novel approaches to compounds labelled with isotopes of hydrogen, applications of isotopes in organic and bio-organic reaction mechanisms, isotopes in macro-molecules, applications of isotopes in metabolism and toxicology, production of stable isotopes and radioisotopes and applications of isotopes in pharmaceutical and agricultural research. Contributions are drawn from major research groups around the world providing an invaluable information and reference source to anyone involved in the production of isotopes, the synthesis and analysis of stable or radioactive isotopically labelled compounds, the applications of short-lived isotopes, drug metabolism and pharmacokinetics, pharmaceutical research and development, clinical research, biosynthesis, handling radioisotopes, laboratory design and other related areas.

Natural Products Isolation G.H. Wagman, R. Cooper, 1988-12-01 This new book encompasses, in great detail, the most recent progress made in the isolation and separation of natural products. It covers antibiotics, marine and plant-derived substances, enzyme inhibitors and interferons. The most recent separation methodology is described. Although there is a bias toward antibiotics, it was done because this is still the largest natural products area of research. The fourteen chapters are written by experts in their respective fields. The first two chapters are largely devoted to new methodology applied to purification of a variety of compounds. They include an extensive review and new applications of counter-current chromatography and the newly emerging HPLC-photodiode array technology. Chapter 3 provides a review of affinity chromatography applied to the separation of antibiotics for the first time. Next are chapters on antimicrobials with an update on all the most recent  $\beta$ -lactam (after 1976) discoveries. A comprehensive review of a very important class of antiparasitic agents - the avermectins - follows. An update of isolation and purification of a variety of marine-derived compounds is next. The succeeding chapter is a comprehensive review of the most recent developments in isolation and purification of interferons. This is followed by a discussion of enzyme inhibitors and their isolation and

purification and ties in with a chapter on plant-derived natural products, some of which are also in this same category. The final chapter is a futuristic essay indicating the isolation of minute amounts of natural products and the fascinating biological properties which they possess. The book has extensive isolation schemes, tables, figures and chemical structures. In many instances a short summary of the producing organism, brief chemical description and structure and biological activity of the compounds is presented. Detailed information of extraction, separation and purification techniques follow. Each chapter has an extensive bibliography and, where applicable, an appendix showing sources of materials and equipment. A detailed index to the subject matter is included at the end of the book. The book thus offers the reader: up-to-date reviews (including 1988) of specific topics in the natural products field not to be found elsewhere; information on new chromatographic methods and techniques described in sufficient detail to be utilized by investigators in this area of research; and extensive references to enable the serious researcher to pursue particular information. It will appeal to pharmaceutical and natural products researchers and is a valuable acquisition for university chemistry and biochemistry departments.

*The Encyclopedia of Mass Spectrometry* Richard Caprioli, 2005-11-11 Volume 3 looks at classes of biomolecules including carbohydrates, nucleic acids, and lipids. In addition, special areas of application are included, such as pharmaceuticals, natural products, isotope ratio methods for biomolecules analysis, and clinical applications. The articles are arranged under general headings for continuity and ease of access, although several of these are of interest across the various disciplines. The articles are intended to teach and therefore strive to cover basics and sufficient additional detail to bring the reader up-to-date on a given subject. Some advanced topics are also covered, either in a special section of articles or in additional reading citations.

### **Characterization of Impurities and Degradants Using Mass Spectrometry**

Guodong Chen,2011-04-27 The book highlights the current practices and future trends in structural characterization of impurities and degradants. It begins with an overview of mass spectrometry techniques as related to the analysis of impurities and degradants, followed by studies involving characterization of process related impurities (including potential genotoxic impurities), and excipient related impurities in formulated products. Both general practitioners in pharmaceutical research and specialists in analytical chemistry field will benefit from this book that will detail step-by-step approaches and new strategies to solve challenging problems related to pharmaceutical research.
