Public Library Collections in the Balance Jennifer Downey,2017-07-25 A fascinating and informative read for librarians, library staff, and MLIS students, this book offers practical information and professional guidelines to examine current issues in censorship and libraries while also enabling readers to consider their own opinions about intellectual freedom. This book addresses contemporary issues in censorship and intellectual freedom and can serve as an invaluable resource for librarians and other library staff and as an eye-opening read for MLIS students. It covers the waterfront of intricate and thorny issues regarding intellectual freedom, including determining strategies for patron privacy, deciding how to filter public computers, handling challenges to items in a collection, and recognizing and eliminating under-the-radar self-censorship during collection development and weeding. Readers will also gain an understanding of the perils of over-reliance on community assessments and other evaluative tools and consider important concerns of public library employees, such as whether to restrict borrowing privileges of R-rated movies and M-rated video games to patrons of various ages, and the legalities that surround these questions. Each chapter blends instructive background narrative with practical advice, research findings, and relevant information about librarianship's professional guidelines, including the ALA's Library Bill of Rights and the Freedom to Read Statement. Vignettes, what would you do? examples, effective nonconfrontational techniques for conflict resolution, and lists of tips and traps help readers to think critically about their own biases and rehearse possible responses to controversial situations. Librarians, library staff, and MLIS students can use this book for personal professional development, as supplemental reading for MLIS courses or professional training workshops, or as a resource for library policy-planning discussions.

Introduction to Data Systems Thomas Bressoud,David White,2020-12-04 Encompassing a broad range of forms and sources of data, this textbook introduces data systems through a progressive presentation. Introduction to Data Systems covers data acquisition starting with local files, then progresses to data acquired from relational databases, from REST APIs and through web scraping. It teaches data forms/formats from tidy data to relationally defined sets of tables to hierarchical structure like XML and JSON using data models to convey the structure, operations, and constraints of each data form. The starting point of the book is a foundation in Python programming found in introductory computer science classes or short courses on the language, and so does not require prerequisites of data structures, algorithms, or other courses. This makes the material accessible to students early in their educational career and equips them with understanding and skills that can be applied in computer science, data science/data analytics, and information technology programs as well as for internships and research experiences. This book is accessible to a wide variety of students. By drawing together content normally spread across upper level computer science courses, it offers a single source providing the essentials for data science practitioners. In our increasingly data-centric world, students from all domains will benefit from the "data-aptitude" built by the material in this book.

Research Guide to Japanese Film Studies Abé Markus Nornes,Aaron Gerow,2016-02-02 Michigan Monograph Series in Japanese Studies No. 65 The Research Guide to Japanese Film Studies provides a snapshot of all the archival and bibliographic resources available to students and scholars of Japanese cinema. Among the nations of the world, Japan has enjoyed an impressively lively print culture related to cinema. The first film books and periodicals appeared shortly after the birth of cinema, proliferating wildly in the 1910s with only the slightest pause in the dark days of World War II. The numbers of publications match the enormous scale of film production, but with the lack of support for film studies in Japan, much of it remains as uncharted territory, with few maps to negotiate the maze of material. This book is the first all-embracing guide ever published for approaching the complex archive for Japanese cinema. It lists all the libraries and film archives in the world with significant collections of film prints, still photographs, archival records, books, and periodicals. It provides a comprehensive, annotated bibliography of the core books and magazines for the field. And it supplies hints for how to find and access materials for any research project. Above and beyond that, Nornes and Gerow's

Research Guide to Japanese Film Studies constitutes a comprehensive overview of the impressive dimensions and depth of the print culture surrounding Japanese film, and a guideline for future research in the field. This is an essential book for anyone seriously thinking about Japan and its cinema.

Digital Libraries: People, Knowledge, and Technology Ee-Peng Lim,Schubert Foo,Chris Khoo,Hsinchun Chen,Edward Fox,Urs Shalini,Costanino Thanos,2003-07-01 The International Conference on Asian Digital Libraries (ICADL) is an annual international forum for participants to exchange research results, innovative ideas, and state-of-the-art developments in digital libraries. Built upon the successes of the first four ICADL conferences, the 5th ICADL Conference in Singapore was aimed at further strengthening the position of ICADL as a premier digital library conference that draws high quality papers and presentations from all around the world, while meeting the needs and interests of digital library communities in the Asia-Pacific region. The theme of the conference, "Digital Libraries: People, Knowledge & Technology," reflects the shared belief of the organizers that success in the development and implementation of digital libraries lies in the achievement of three key areas: the richness and depth of content to meet the needs of the communities they intend to serve; the technologies that are employed to build user-centered environments through organization, interaction, and provision of access to that content; and the human elements of management policies, maintenance, and vision necessary to keep pace with new content, new technologies, and changing user needs.

Internet Reference Support for Distance Learners Rita Pellen,William Miller,2013-12-19 Make separate library services for distance learners a thing of the past Internet Reference Support for Distance Learners takes a comprehensive look at efforts by librarians and information specialists to provide distance learners with effective services that match those already available on campus. With the development of the World Wide Web and the evolution of Web-based services, reference librarians are adding a human element to the virtual library, blurring the difference between distance learners and traditional users. This unique book examines how they deal with a wide range of related topics, including standards and guidelines, copyright issues, streaming media, and chat and digital references, and presents a historical overview of how reference and instructional services have been delivered to distance users—before and after the creation of the Internet. Internet Reference Support for Distance Learners reveals that librarians do not make a sharp distinction between reference and instruction within the context of distance learning, and that there is no clear boundary between "true" distance learners and more traditional students who might use services designed for nontraditional users. Online capabilities have allowed reference librarians to approximate services advocated by published guidelines and standards, including the ACRL Distance Learning Section's Guidelines for Distance Learning Library Services, to provide a framework for librarians to plan services for off-campus students. Internet Reference Support for Distance Learners provides practical information on: how librarians can "keep IT simple" when designing methods to access reference support why library Web sites are vital sources of communication between the distance learning student and the reference-based instructional component how to set up a university chat service, including software selection, staff training and assessment how to provide students services beyond traditional provision of resources, including advising, enrollment, and payment of fees how to create an online assistance site that incorporates online versions of traditional print handouts, FAQs, subject guides, course-specific guides, learning modules, and instructional videos in one central location how to work with faculty to create online support for students in Blackboard courses the pros and cons of using open-source software how to create an online library assistance site how to create online information literacy course to teach independent research skills to remote students how to avoid copyright infringement and how to educate library personnel about copyright law how to use Camtasia Studio, a screen capture program to create audio and

video for online presentations Internet Reference Support for Distance Learners is an invaluable resource for librarians working in academic, school, special, and public settings, and for library science faculty and students.
