The Soviets have created a new plane equipped with a weapons system that can be activated via sensors in the pilot's helmet—an advance that could shift the global balance of power. But British intelligence has a plan. There are two prototypes within the heavily secured Soviet base, and with some help from the CIA, they're going to steal one. The man chosen for the job is US pilot and troubled Vietnam veteran Mitchell Gant. First, he has to get into Russia. Then the airbase. Then the hangar. Then onto the plane and into the air. All while the KGB scrambles to stop him at any cost . . . “Like a domino fall in slow motion.” —Kirkus Reviews (starred review) “Will have you sweating bullets. Peer Participation and Software David R. Booth, 2010-04-09 An examination of Mozilla's unique approach to software development considers how this model of participation might be applied to political and civic engagement. Firefox, a free Web browser developed by the Mozilla Foundation, is used by an estimated 270 million people worldwide. To maintain and improve the Firefox browser, Mozilla depends not only on its team of professional programmers and managers but also on a network of volunteer technologists and enthusiasts—free/libre and open source software (FLOSS) developers—who contribute their expertise. This kind of peer production is unique, not only for its vast scale but also for its combination of structured, hierarchical management with open, collaborative volunteer participation. In this MacArthur Foundation Report, David Booth examines the Mozilla Foundation's success at organizing large-scale participation in the development of its software and considers whether Mozilla's approach can be transferred to government and civil society. Booth finds parallels between Mozilla's collaboration with Firefox users and the Obama administration's philosophy of participatory governance (which itself amplifies the much older Jeffersonian ideal of democratic participation). Mozilla's success at engendering part-time, volunteer participation that produces real marketplace innovation suggests strategies for organizing civic participation in communities and government. Mozilla's model could not only show us how to encourage the technical community to participate in civic life but also teach us something about how to create successful political democracy.
