Advances in Digital Forensics XII Gilbert Peterson,Sujeet Sheno,2016-09-19 Digital forensics deals with the acquisition, preservation, examination, analysis and presentation of electronic evidence. Networked computing, wireless communications and portable electronic devices have expanded the role of digital forensics beyond traditional computer crime investigations. Practically every crime now involves some aspect of digital evidence; digital forensics provides the techniques and tools to articulate this evidence. Digital forensics also has myriad intelligence applications. Furthermore, it has a vital role in information assurance -- investigations of security breaches yield valuable information that can be used to design more secure systems. Advances in Digital Forensics XII describes original research results and innovative applications in the discipline of digital forensics. In addition, it highlights some of the major technical and legal issues related to digital evidence and electronic crime investigations. The areas of coverage include: Themes and Issues, Mobile Device Forensics, Network Forensics, Cloud Forensics, Social Media Forensics, Image Forensics, Forensic Techniques, and Forensic Tools. This book is the twelfth volume in the annual series produced by the International Federation for Information Processing (IFIP) Working Group 11.9 on Digital Forensics, an international community of scientists, engineers and practitioners dedicated to advancing the state of the art of research and practice in digital forensics. The book contains a selection of twenty edited papers from the Twelfth Annual IFIP WG 11.9 International Conference on Digital Forensics, held in New Delhi, India in the winter of 2016. Advances in Digital Forensics XII is an important resource for

researchers, faculty members and graduate students, as well as for practitioners and individuals engaged in research and development efforts for the law enforcement and intelligence communities. Gilbert Peterson, Chair, IFIP WG 11.9 on Digital Forensics, is a Professor of Computer Engineering at the Air Force Institute of Technology, Wright-Patterson Air Force Base, Ohio, USA. Sujeet Shenoi is the F.P. Walter Professor of Computer Science and a Professor of Chemical Engineering at the University of Tulsa, Tulsa, Oklahoma, USA.

**Recent Advances in Multimedia Signal Processing and Communications** Mislav Grgic, Kresimir Delac, Mohammed Ghanbari, 2009-09-30 The rapid increase in computing power and communication speed, coupled with computer storage facilities availability, has led to a new age of multimedia applications. Multimedia is practically everywhere and all around us we can feel its presence in almost all applications ranging from online video databases, IPTV, - teractive multimedia and more recently in multimedia based social interaction. These new growing applications require high-quality data storage, easy access to multimedia content and reliable delivery. Moving ever closer to commercial - ployment also aroused a higher awareness of security and intellectual property management issues. All the aforementioned requirements resulted in higher demands on various - eas of research (signal processing, image/video processing and analysis, com- munication protocols, content search, watermarking, etc.). This book covers the most prominent research issues in multimedia and is divided into four main sections: i) content based retrieval, ii) storage and remote access, iii)

watermarking and co- right protection and iv) multimedia applications. Chapter 1 of the first section presents an analysis on how color is used and why is it crucial in nowadays multimedia applications. In chapter 2 the authors give an overview of the advances in video abstraction for fast content browsing, transmission, retrieval and skimming in large video databases and chapter 3 extends the discussion on video summarization even further. Content retrieval problem is tackled in chapter 4 by describing a novel method for producing meaningful segments suitable for MPEG-7 description based on binary partition trees (BPTs).

**What's Wrong with Addiction?** Helen Keane,2002 This is an impressive work: carefully structured, researched and written . . . a refreshingly lucid account that is both intellectually stimulating and professionally helpful.-Janet McCalman Addicts are generally regarded with either pity or grave disapproval. But is being addicted to something necessarily bad? These attitudes are explicit both in contemporary medical literature and in popular, self-help texts. We categorise addiction as unnatural, diseased and self-destructive. We demonise pleasure and desire, and view the addict as physically and morally damaged. Helen Keane's thought-provoking text examines these assumptions in a new light. In asserting that the 'wrongness' of addiction is not fixed or indeed obvious, she presents a refreshing challenge to more conventional accounts of addiction. She also investigates the notion that people can be addicted to eating, love and sex, just as they are to drugs and alcohol. What's Wrong with Addiction? shows that most of our ideas about addiction take certain ideals of health and normality for granted. It exposes strains in our society's oppositions between health and disease, between the natural and the artificial, between order and disorder, and between self and other.
