Advanced Bash Scripting Guide Mendel Cooper,

Living Electronic Music Professor Simon Emmerson, 2013-01-28 Drawing on recent ideas that explore new environments and the changing situations of composition and performance, Simon Emmerson provides a significant contribution to the study of contemporary music, bridging history, aesthetics and the ideas behind evolving performance practices. Whether created in a studio or performed on stage, how does electronic music reflect what is live and living? What is it to perform 'live' in the age of the laptop? Many performer-composers draw upon a 'library' of materials but others refuse to abandon traditionally 'created and structured' electroacoustic work. Lying behind this maelstrom of activity is the perennial relationship to 'theory', that is, ideas, principles and practices that somehow lie behind composers' and performers' actions. The relationship of the body performing to the spaces around has also undergone a revolution as the source of sound production has shifted to the loudspeaker. Emmerson considers these issues in the framework of our increasingly 'acousmatic' world in which we cannot see the source of the sounds we hear.

The Galactic Black Hole H Falcke,F Hehl,2002-12-16 The supermassive black hole in the center of our Milky Way is the nearest such object and relatively easy to observe and study. Not surprisingly therefore, it is the best studied supermassive black hole. Many astrophysical and even general relativistic effects can be investigated in great detail. The Galactic Black Hole: Lectures on General Relativity and Astrophysics provides a systematic introduction to the physics/astrophysics and mathematics of black holes at a level suitable for graduate students, postdocs, and researchers in physics, astrophysics, astronomy, and applied mathematics. The focus is mainly on the supermassive black hole in the center of our Milky Way but the results can be easily generalized taking it as an example. Leading international experts provide first-hand accounts of the observational and theoretical aspects of this black hole. Topics range from the properties of the Schwarzschild metric and the collapse of a black hole, to quantum gravity, and from the structure of the Galaxy to accretion of matter and the emission properties of the Galactic Center black hole.

The Only Efficient Instrument Aleta Feinsod Cane,Susan Alves,2005-04 Many farsighted women writers in nineteenth-century America made thoughtful and sustained use of newspapers and magazines to effect social and political change. "The Only Efficient Instrument": American Women Writers and the Periodical, 1837-1916 examines these pioneering efforts and demonstrates that American women had a vital presence in the political and intellectual communities of their day. Women writers and editors of diverse social backgrounds and ethnicities realized very early that the periodical was a powerful tool for education and social reform—it was the only efficient instrument to make themselves and their ideas better known. This collection of critical essays explores American women's engagement with the periodical press and shows their threefold use of the periodical: for social and political advocacy; for the critique of gender roles and social expectations; and for refashioning the periodical as a more inclusive genre that both articulated and obscured such distinctions as class, race, and gender. Including essays on familiar figures such as Margaret Fuller, Harriet Beecher Stowe, Kate Chopin, and Charlotte Perkins Gilman, "The Only Efficient Instrument" also focuses on writings from lesser-known authors, including Native American Zitkala-Sä, Mexican American María Cristina Mena, African American Frances Ellen Watkins Harper, and the Lowell factory workers. Covering nearly eighty years of publishing history, from the press censure of the outspoken Angelina Grimké in 1837 to the last issue of Gilman's Forerunner in 1916, this fascinating collection breaks new ground in the study of the women's rights movement in America.
