Beginning HTML5 Media Silvia Pfeiffer, Tom Green, 2015-06-15 Beginning HTML5 Media, Second Edition is a comprehensive introduction to HTML5 video and audio. The HTML5 video standard enables browsers to support audio and video elements natively. This makes it very easy for web developers to publish audio and video, integrating both within the general presentation of web pages. For example, media elements can be styled using CSS (style sheets), viewed on a mobile device, and manipulated in a Canvas or an audio filter graph. The book offers techniques for providing accessibility to media elements, enabling consistent handling of alternative representations of media resources. The update includes all of the changes and revisions since the first HTML5 draft. Beginning HTML5 Media dives deep into the markup that is introduced for media element support in browsers. You'll explore the default user interface offered through browsers for media elements, as well as the JavaScript API provided to control their behavior. You'll also learn how to account for H.264, WebM and Ogg Theora codecs as well as explore the

emerging Web Audio API standard, which provides an extensive set of hardware-accelerated audio filters to achieve a level of audio signal manipulation in the browser previously only available to audio professionals.

Science and Technology in International Economic Law Bryan Mercurio,Kuei-Jung Ni,2013-12-13 Science and technology plays an increasingly important role in the

continued development of international economic law. This book brings together well-known and rising scholars to explore the status and interaction of science, technology and international economic law. The book reviews the place of science and technology in the development of international economic law with a view to ensure a balance between the promotion of trade and investment liberalisation and decision-making based on a sound scientific process without hampering technological development. The book features chapters from a range of experts – including Lukasz Gruszczynski, Jürgen Kurtz, Andrew Mitchell and Peter K. Yu – who examine a wide range of issues such as investment law, international trade law, and international intellectual property. By bringing together these issues, the book asks how international trade and investment regimes utilise science and technology, and whether they do so fairly and in the interest of broader public policies. This book will be of great interest to researchers of international economic law, health law, technology law and international intellectual property law.
