World Report on Violence and Health World Health Organization,2002 This report is part of WHO's response to the 49th World Health Assembly held in 1996 which adopted a resolution declaring violence a major and growing public health problem across the world. It is aimed largely at researchers and practitioners including health care workers, social workers, educators and law enforcement officials.

The Potato Crop Hugo Campos,Oscar Ortiz,2019-12-03 This book is open access under a CC BY 4.0 license. This book provides a fresh, updated and science-based perspective on the current status and prospects of the diverse array of topics related to the potato, and was written by distinguished scientists with hands-on global experience in research aspects related to potato. The potato is the third most important global food crop in terms of consumption. Being the only vegetatively propagated species among the world's main five staple crops creates both issues and opportunities for the potato: on the one hand, this constrains the speed of its geographic expansion and its options for international commercialization and distribution when compared with commodity crops such as maize, wheat or rice. On the other, it provides an effective insulation against speculation and unforeseen spikes in commodity prices, since the potato does not represent a good traded on global markets. These two factors highlight the underappreciated and underrated role of the potato as a dependable nutrition security crop, one that can mitigate turmoil in world food supply and demand and political instability in some developing countries. Increasingly, the global role of the potato has expanded from a profitable crop in developing countries to a crop providing income and nutrition security in developing ones. This book will appeal to academics and students of crop sciences, but also policy makers and other stakeholders involved in the potato and its contribution to humankind's food security.

ReNEUAL Model Rules on EU Administrative Procedure Paul Craig,Herwig Hofmann,Jens-Peter Schneider,Jacques Ziller,2017 The Research Network on EU Administrative Law (ReNEUAL) was established in 2009 and now comprises well over one hundred scholars and practitioners active in the field of EU and comparative public law. The aim of the network is to contribute to the development of a legal framework in which the constitutional values of the EU can be embedded in the exercise of public authority. Drafted by four working groups addressing the main aspects of EU administrative procedure, the ReNEUAL Model Rules offer a toolkit for European and domestic authorities seeking to regulate administrative action, reinforcing general principles of EU law and identifying, on the basis of comparative research, best practices in different specific policies of the EU. The book includes an extended introduction chapter, followed by the Model Rules, which are organised into six parts. Part I addresses general issues concerning the scope of the Model Rules and their relation to existing rules in EU legislation and Member State law; Part II is concerned with rulemaking by EU institutions, bodies, offices, and agencies; Part III focuses on single case decision-making by EU institutions, bodies, offices, and agencies; Part IV addresses contracts of EU institutions, bodies, offices, and agencies; Part V discusses mutual assistance between administrations; and Part VI addresses inter-

administrative information management.

GIS LATAM Miguel Felix Mata-Rivera,Roberto Zagal-Flores,Javier Arellano Verdejo,Hugo Enrique Lazcano Hernandez,2020-09-21 This book constitutes the refereed proceedings of the First GIS LATAM Conference, GIS LATAM 2020, held in September 2020. Due to the COVID-19 pandemic the conference was held online. The 9 full papers and 2 short papers were thoroughly reviewed and selected from 29 submissions. The papers are focused on the GIS applications in data analytics in spheres of health, environment, government, public, and education.

Some Drinking-water Disinfectants and Contaminants, Including Arsenic IARC Working Group on the Evaluation of Carcinogenic Risks to Humans,International Agency for Research on Cancer,2004 A working group of 23 experts from 13 countries met in Lyon to evaluate the evidence for carcinogenicity of arsenic (mostly naturally occurring) as a contaminant of drinking-water, and of the water-disinfectant chloramine. The working group also evaluated or re-evaluated four chlorination by-products found in drinking-water, namely chloral hydrate, di- and trichloroacetic acids, and 3-chloro-4-(dichloromethyl)-5-hydroxy-2(5H)-furanone (also known as MX). High-level exposure to arsenic in drinking-water occurs in some regions such as China, Latin America, Bangladesh and West Bengal. The Working Group reviewed epidemiological studies of human cancer (mainly ecological studies in Taiwan and Chile, and several case-control and cohort studies) in relation to arsenic in drinking-water. Arsenic in drinking-water (primarily inorganic, as arsenate and to a lesser extent arsenite) was evaluated as carcinogenic to humans (Group 1) on the basis of sufficient evidence for an increased risk for cancer of the urinary bladder, lung and skin. Studies on inorganic arsenic in experimental animals provided limited evidence for its carcinogenicity, but sufficient evidence was found in experimental animals for the carcinogenicity of dimethylarsinic acid (an organic form of arsenic), which produced urinary bladder tumours in rats and lung tumours in mice after oral administration.

Malignant Mesothelioma Harvey I. Pass,Nicholas Vogelzang,Michele Carbone,2006-08-01 Malignant Mesothelioma brings together the most current diagnostic criteria and treatment plans from the world's leading experts on this rare but devastating cancer. The first edition was a critical and commercial success and this revision builds on that reputation. The editors have brought together the world's leading experts to fully explore the latest scientific breakthroughs in carcinogenesis, immunotherapy, potential vaccination strategies, and gene therapy. The clinical aspects of the book are equally strong, with thorough discussion of epidemiology, etiology, different clinical presentations, imaging (including interventional pulmonology), treatment of benign disease, strategies for multimodality treatment of malignant disease. Editors: Harvey I. Pass, M.D, Chief, Thoracic Surgery, New York University, New York, NY; Nicholas Vogelzang, M.D, Director, Nevada Cancer Institute, Las Vegas, NV; University of Chicago, Michele Carbone, M.D., Ph.D, Researcher and Director, Thoracic Oncology Program, Cancer Research Center of Hawaii, Honolulu, HI; and Anne S. Tsao, M.D, Department of Thoracic/Head & Neck Medical Oncology, The University of Texas M. D. Anderson Cancer Center, Houston, TX.

Veterans and Agent Orange National Academies of Sciences, Engineering, and Medicine,Institute of Medicine,Board on the Health of Select Populations,Committee to Review the Health Effects in Vietnam Veterans of Exposure to Herbicides (Tenth Biennial Update),2016-04-29 From 1962 to 1971, the US military sprayed herbicides over Vietnam to strip the thick jungle canopy that could conceal opposition forces, to destroy crops that those forces might depend on, and to clear tall grasses and bushes from the perimeters of US base camps and outlying fire-support bases. Mixtures of 2,4-dichlorophenoxyacetic acid (2,4-D), 2,4,5-trichlorophenoxyacetic acid (2,4,5-T), picloram, and cacodylic acid made up the bulk of the herbicides sprayed. The main chemical mixture sprayed was Agent Orange, a 50:50 mixture of 2,4-D and 2,4,5-T. At the time of the spraying, 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD), the most toxic form of dioxin, was an unintended contaminant generated during the production of 2,4,5-T and so was present in Agent Orange and some other formulations sprayed in Vietnam. Because of complaints from returning Vietnam veterans about their own health and that of their children combined with emerging toxicologic evidence of adverse effects

of phenoxy herbicides and TCDD, the National Academy of Sciences was asked to perform a comprehensive evaluation of scientific and medical information regarding the health effects of exposure to Agent Orange, other herbicides used in Vietnam, and the various components of those herbicides, including TCDD. Updated evaluations were conducted every two years to review newly available literature and draw conclusions from the overall evidence. Veterans and Agent Orange: Update 2014 is a cumulative report of the series thus far.

Cellular Interactions in Cardiac Pathophysiology Ján Slezák, Attila Ziegelhöffer, 2012-12-06 Despite the considerable success in treating diseases of the heart and blood vessels, they still remain the major cause of mortality throughout the world. One of the reasons underlying this problem is our lack of understanding of the molecular and cellular aspects of the processes involved. These problems are fully discussed in *Cellular Interactions in Cardiac Pathophysiology*, which draws together 25 contributions from leading investigators from all parts of the world. The contributions are grouped under three headings: Extracellular matrix and cardiocyte interaction; Myocytic adaptations and myocardial injury; and Signal transduction.

Competition Policy Massimo Motta, 2004-01-12 This is the first book to provide a systematic treatment of the economics of antitrust (or competition policy) in a global context. It draws on the literature of industrial organisation and on original analyses to deal with such important issues as cartels, joint-ventures, mergers, vertical contracts, predatory pricing, exclusionary practices, and price discrimination, and to formulate policy implications on these issues. The interaction between theory and practice is one of the main features of the book, which contains frequent references to competition policy cases and a few fully developed case studies. The treatment is written to appeal to practitioners and students, to lawyers and economists. It is not only a textbook in economics for first year graduate or advanced undergraduate courses, but also a book for all those who wish to understand competition issues in a clear and rigorous way. Exercises and some solved problems are provided.

The Therapeutic Use of N-Acetylcysteine (NAC) in Medicine Richard Eugene Frye, Michael Berk, 2018-09-20 Focusing on the practical use of N-Acetyl-Cysteine (NAC) in medicine, this book provides a comprehensive review of the basic biological and clinical studies documenting its benefits in treating medical disease. NAC is perhaps best known as an antidote for acetaminophen, but its therapeutic effect in a wide range of medical diseases has recently been realized. In addition to its well recognized use in radiological contrast prophylaxis for renal disease and pulmonary disorders, studies have suggested significant promise in psychiatric and neurological disorders such as addiction, Alzheimer's disease, ataxia, autism, bipolar disorder, depression, epilepsy, neuropathy, obsessive-compulsive disorder, schizophrenia, traumatic brain injury and trichotillomania in addition to promising studies in audiology, cardiology, exercise physiology, gastroenterology, hematology, infectious disease, infertility and ophthalmology. Given the promising studies for a wide range of medical conditions, coupled with an excellent safety profile, the potential for NAC in the treatment of human disease appears considerable. Dr Leonore A Herzenberg from Stanford University, a pioneer of redox physiology and the use of NAC, provides a succinct history of the development of the therapeutic use of NAC for medical disease. This is followed by a series of basic science chapters outlining the role of NAC in important physiological processes, including modulation of dopamine and glutamate neurotransmitter systems, redox and mitochondrial metabolism, apoptosis and inflammation. The last section of the book is dedicated to clinically oriented chapters that comprehensively review the literature on medical disorders in which NAC has been found to be effective, including toxicity and cardiovascular, gastrointestinal, neurological, psychiatric, pulmonary and renal disorders. Each chapter reviews the theoretical biological mechanisms of NAC for the specific diseases reviewed, rates the clinical studies using a standardized criteria in order to provide an objective level of evidence and grade of recommendation for the use of NAC for specific medical conditions and outlines the ongoing clinical trials examining NAC for the treatment of specific diseases. Final chapters review the clinical evidence verifying that specific theoretical biological mechanisms are actually being targeted by NAC in medical disease. Studies on the pharmacology,

formulation and potential adverse effects of NAC are also reviewed. A final chapter synthesizes the clinical studies to suggest that the effectiveness of NAC may signal a new basic physiological disorder, glutathione deficiency, which may be an important pathophysiological mechanism of many diseases.

Medical Virology 8 Luis M. de la Maza, Ellena M. Peterson, 2013-11-11 No other area of biology has grown as fast and become as relevant over the last decade as virology. It is with no little amount of amazement, that the more we learn about fundamental biological questions and mechanisms of diseases, the more obvious it becomes that viruses permeate all facets of our lives. While on one hand viruses are known to cause acute and chronic, mild and fatal, focal and generalized diseases, on the other hand, they are used as tools for gaining an understanding of the structure and function of higher organisms, and as vehicles for carrying protective or curative therapies. The wide scope of approaches to different biological and medical virological questions was well represented by the speakers that participated in this year's Symposium. While the epidemic by the human immunodeficiency virus type 1 continues to spread without hope for much relief in sight, intriguing questions and answers in the area of diagnostics, clinical manifestations and therapeutical approaches to viral infections are unveiled daily. Let us hope, that with the increasing awareness by our society of the role played by viruses, not only as causative agents of diseases, but also as models for better understanding basic biological principles, more efforts and resources are placed into their study. Luis M. de la Maza Irvine, California Ellena M.

Oxidative Stress and Chronic Degenerative Diseases Jose Antonio Morales-Gonzalez, 2013-05-22 This work responds to the need to find, in a sole document, the affect of oxidative stress at different levels, as well as treatment with antioxidants to revert and diminish the damage. *Oxidative Stress and Chronic Degenerative Diseases - a Role for Antioxidants* is written for health professionals by researchers at diverse educative institutions (Mexico, Brazil, USA, Spain, Australia, and Slovenia). I would like to underscore that of the 19 chapters, 14 are by Mexican researchers, which demonstrates the commitment of Mexican institutions to academic life and to the prevention and treatment of chronic degenerative diseases.

Natural Gas Seepage Giuseppe Etiope, 2015-01-30 The book offers a modern, comprehensive, and holistic view of natural gas seepage, defined as the visible or invisible flow of gaseous hydrocarbons from subsurface sources to Earth's surface. Beginning with definitions, classifications for onshore and offshore seepage, and fundamentals on gas migration mechanisms, the book reports the latest findings for the global distribution of gas seepage and describes detection methods. Seepage implications are discussed in relation to petroleum exploration, environmental impacts (hazards, pollution, atmospheric emissions, and past climate change), emerging scientific issues (abiotic gas and methane on Mars), and the role of seeps in ancient cultures. With an updated bibliography and an integrated analysis of available data, the book offers a new fundamental awareness - gas seepage is more widespread than previously thought and influences all of Earth's external "spheres", including the hydrosphere, atmosphere, biosphere, and anthroposphere.

Constitutionalism and Dictatorship Robert Barros, 2002-07-04 It is widely believed that autocratic regimes cannot limit their power through institutions of their own making. This book presents a surprising challenge to this view. It demonstrates that the Chilean armed forces were constrained by institutions of their own design. Based on extensive documentation of military decision-making, much of it long classified and unavailable, this book reconstructs the politics of institutions within the recent Chilean dictatorship (1973-1990). It examines the structuring of institutions at the apex of the military junta, the relationship of military rule with the prior constitution, the intra-military conflicts that led to the promulgation of the 1980 constitution, the logic of institutions contained in the new constitution, and how the constitution constrained the military junta after it went into force in 1981. This provocative account reveals the standard account of the dictatorship as a personalist regime with power concentrated in Pinochet to be grossly inaccurate.
