Pain Management and the Opioid Epidemic National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on Pain Management and Regulatory Strategies to Address Prescription Opioid Abuse, 2017-09-28 Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Mae Among the Stars Roda Ahmed, 2020-05-26 A beautiful picture book for sharing and marking special occasions such as graduation, inspired by the life of the first African American woman to travel in space, Mae Jemison. An Amazon Best Book of the Month! A great classroom and bedtime read-aloud, Mae Among the Stars is the perfect book for young readers who have big dreams and even bigger hearts. When Little Mae was a child, she dreamed of dancing in space. She imagined herself surrounded by billions of stars, floating, gliding, and discovering. She wanted to be an astronaut. Her mom told her, "If you believe it, and work hard for it, anything is possible." Little Mae's curiosity, intelligence, and determination, matched with her parents' encouraging words, paved the way for her incredible success at NASA as the first African American woman to travel in space. This book will inspire other young girls to reach for the stars, to aspire for the impossible, and to persist with childlike imagination.

Orbital Mechanics for Engineering Students Howard D Curtis, 2009-10-26 Orbital Mechanics for Engineering Students, Second Edition, provides an introduction to the basic concepts of space mechanics. These include vector kinematics in three dimensions; Newton's laws of motion and gravitation; relative motion; the vector-based solution of the classical two-body problem; derivation of Kepler's equations; orbits in three dimensions; preliminary orbit determination; and orbital maneuvers. The book also covers relative motion and the two-impulse rendezvous problem; interplanetary mission design using patched conics; rigid-body dynamics used to characterize the attitude of a space vehicle; satellite attitude dynamics; and the characteristics and design of multi-stage launch vehicles. Each chapter begins with an outline of key concepts and concludes with problems that are based on the material covered. This text is written for undergraduates who are studying orbital mechanics for the first time and have completed courses in physics, dynamics, and mathematics, including differential equations and applied linear algebra. Graduate students, researchers, and experienced practitioners will also find useful review materials in the book. NEW: Reorganized and improved discussions of coordinate systems, new discussion on perturbations and quaternions. NEW: Increased coverage of attitude dynamics, including new Matlab algorithms and examples in chapter 10. New examples and homework problems.

Essentials of Strength Training and Conditioning Thomas R. Baechle, Roger W. Earle, National Strength & Conditioning Association (U.S.), 2000 In this revised and expanded second edition of Essentials of Strength Training and Conditioning, now with over 300 color photographs, leading exercise science professionals explore the scientific principles, concepts, and theories of strength training and conditioning as well as their practical applications to athletic performance. Students, coaches, strength and conditioning specialists, personal trainers, athletic trainers, and other sport science professionals will find state-of-the-art, comprehensive information on structure and function of body systems, training adaptations, testing and evaluation, exercise techniques, program design (aerobic and anaerobic) and training facility organization and administration. Edited by Thomas R. Baechle and Roger W. Earle, Essentials of Strength Training and Conditioning, Second Edition, is an excellent text for students preparing for careers in strength training and conditioning. It is the most comprehensive reference available for strength and conditioning professionals and sports medicine specialists. For people preparing to take the Certified Strength and Conditioning Specialist examination, it is the primary preparation resource. Those preparing to take the NSCA Certified Personal Trainer examination will also find it to be a valuable resource. The NSCA Certification Commission, the certifying body of the National Strength and Conditioning Association, has developed this text. Each of the book's 26 chapters provides an overview of an important aspect of strength and conditioning and includes chapter objectives, application boxes, key points, key terms, study questions, and questions requiring practical application of key concepts. In Section 1 of Essentials of Strength Training and Conditioning, Second Edition, experts in exercise physiology, biochemistry, anatomy, biomechanics, endocrinology, sports nutrition, and sport psychology discuss the principles of their respective areas of expertise and how they apply in designing safe, effective strength and conditioning programs. Section 2 discusses the selection, administration, scoring, and the interpretation of testing results. Section 3 provides information regarding the correction and execution of stretching, warm-up, and resistance training exercises. Section 4 applies information from the first three sections to the design of effective strength training and conditioning programs, both aerobic and anaerobic. The three parts of Section 4 address anaerobic exercise prescription, aerobic endurance exercise prescription, and periodization and rehabilitation. The anaerobic prescription section provides guidelines for resistance and plyometric training as well as for speed, agility, and speed endurance programs. Step-by-step guidelines are given for designing strength and conditioning programs, and application boxes illustrate how each variable applies to athletes with different training goals. A unique feature of this edition is the use of scenarios to illustrate how the guidelines presented for each of the program design variables are applied to attain the different training scores. Section 5 addresses facility design, scheduling, policies and procedures, maintenance, and risk management concerns.

Our History Is the Future Nick Estes, 2019-03-05 Winner of the Oakland "Blue Collar" PEN Award. A work of history, a manifesto, and an intergenerational story of resistance that shows how two centuries of Indigenous struggle created the movement proclaiming "Water is Life." In 2016, a small protest encampment at the Standing Rock reservation in North Dakota, initially established to block construction of the Dakota Access oil pipeline, grew to be the largest Indigenous protest movement in the twenty-first century, attracting tens of thousands of Indigenous and non-Native allies from around the world. Its slogan "Mni Wiconi"—Water is Life—was about more than just a pipeline. Water Protectors knew this battle for Native sovereignty had already been fought many times before, and that, even after the encampment was gone, their anti-colonial struggle would continue. In Our History is the Future, Nick Estes traces traditions of Indigenous resistance leading to the #NoDAPL movement from the days of the Missouri River trading forts through the Indian Wars, the Pick-Sloan dams, the American Indian Movement, and the campaign for Indigenous rights at the United Nations. While a historian by trade, Estes also draws on observations from the encampments and from growing up as a citizen of the Oceti Sakowin (the Nation of the Seven Council Fires), making Our History is the Future at once a work of history, a personal story, and a manifesto.

The Potato Crop Hugo Campos,Oscar Ortiz,2019-12-03 This book is open access under a CC BY 4.0 license. This book provides a fresh, updated and science-based perspective on the current status and prospects of the diverse array of topics related to the potato, and was written by distinguished scientists with hands-on global experience in research aspects related to potato. The potato is the third most important global food crop in terms of consumption. Being the only vegetatively propagated species among the world’s main five staple crops creates both issues and opportunities for the potato: on the one hand, this constrains the speed of its geographic expansion and its options for international commercialization and distribution when compared with commodity crops such as maize, wheat or rice. On the other, it provides an effective insulation against speculation and unforeseen spikes in commodity prices, since the potato does not represent a good traded on global markets. These two factors highlight the underappreciated and underrated role of the potato as a dependable nutrition security crop, one that can mitigate turmoil in world food supply and demand and political instability in some developing countries. Increasingly, the global role of the potato has expanded from a profitable crop in developing countries to a crop providing income and nutrition security in developing ones. This book will appeal to academics and students of crop sciences, but also policy makers and other stakeholders involved in the potato and its contribution to humankind’s food security.

I'm Worried Michael Ian Black,2019-06-04 A girl, a flamingo, and a worried potato star in the third book in New York Times bestselling author Michael Ian Black and celebrated illustrator Debbie Ridpath Ohi’s series about feelings—and why they’re good, even when they feel bad. Potato is worried. About everything. Because anything might happen. When he tells his friends, he expects them to comfort him by saying that everything will be okay. Except they don’t. Because it might not be, and that’s okay too. Still, there’s one thing they can promise for sure: no matter what happens...they will always be by his side.
