World Scientific Reference On Entrepreneurship, The (In 4 Volumes) ,2016-12-28 This book examines an important economic development in East Asia during the first decade of the 21st century. Whereas regional arrangements were, with the sole significant exception of ASEAN, conspicuously absent before 2000, they have proliferated since 2000 in both the monetary and trade areas. The book places this political development in the changing nature of the national economies, especially their increasing integration into regional and global value chains with the fragmentation of production processes.This is a freshly written, coherent analysis of the topic, drawing upon (updated) material from a series of articles that the author has published on the subject over the years. Although the book is based on theoretical and, especially, empirical analysis of regionalism, it is written in a non-technical style accessible to a wide range of readers. The book is likely to be adopted as supplementary reading for university courses on Asian economies, whether be it in area studies or economics/political economy disciplines.

Measurement in Social Psychology Hart Blanton,LaCroix Jessica M.,Webster Gregory D.,2018-10-25 Although best known for experimental methods, social psychology also has a strong tradition of measurement. This volume seeks to highlight this tradition by introducing readers to measurement strategies that help drive social psychological research and theory development. The books opens with an analysis of the measurement technique that dominates most of the social sciences, self-report. Chapter 1 presents a conceptual framework for interpreting the data generated from self-report, which it uses to provide practical advice on writing strong and structured self-report items. From there, attention is drawn to the many other innovative measurement and data-collection techniques that have helped expand the range of theories social psychologists test. Chapters 2 through 6 introduce techniques designed to measure the internal psychological states of individual respondents, with strategies that can stand alone or complement anything obtained via self-report. Included are chapters on implicit, elicitation, and diary approaches to collecting response data from participants, as well as neurological and psychobiological approaches to inferring underlying mechanisms. The remaining chapters introduce creative data-collection techniques, focusing particular attention on the rich forms of data humans often leave behind. Included are chapters on textual analysis, archival analysis, geocoding, and social media harvesting. The many methods covered in this book complement one another, such that the full volume provides researchers with a powerful toolset to help them better explore what is social about human behavior.

This practical guide covers methodological issues such as dealing with different types of digital data, construct validity, representativeness and big data sampling.
