**Developmental Environmentalism** Elizabeth Thurbon,Sung-Young Kim,Hao Tan,John A Mathews,2023-04-15 Why has East Asia emerged as the global leader in green energy industries but - until recently - lagged on carbon emission reduction? What is new and distinctive about East Asia's approach to the green energy transition? And what does this approach mean for the world? Developmental Environmentalism provides the first comprehensive account of East Asia's green energy shift. It highlights the powerful and symbiotic role of state ambition, geostrategic competition, and capitalist market dynamics in driving forward the region's greening efforts. Through an analysis of the ambitious national strategies of China and South Korea, the authors show how state actors have pursued a distinctively East Asian approach to transforming their energy systems, involving first the rapid creation of new green energy industries and then the coordinated destruction of fossil-fuel incumbencies. This approach - described as 'Developmental Environmentalism' - is aimed at establishing East Asian economies as leaders in the green industries of the future, while at the same time addressing the pressing environmental, social and political problems associated with the carbon-intensive industries of the past. By developing four detailed, longitudinal case studies of green industry creation and fossil-fuel phase out in China and Korea, the authors identify the key successes and failures of East Asia's green shift to date and anticipate its most likely future trajectory. Based on their findings, the authors reject the idea that East Asia's greening strategies are mere exercises in 'greenwashing' or fossil-fuelled 'business as usual'. Rather, there is something fundamentally transformative underway in the region at the level of elite ideation, strategic ambition, and policy action; the green energy shift represents much more than continuity in Asia's erstwhile developmental states. To execute their analysis, the authors synthesise insights from cutting-edge Developmental State and Schumpeterian theorising. They show how state actors in East Asia are engaging in a sophisticated kind of economic statecraft, strategically harnessing the capitalist market dynamics of 'creative-destruction' to advance their transformative green ambitions through green growth. They also assess the implications of developmental environmentalism for developed and developing countries, and the future of the global green shift in an era of geostrategic rivalry.

China-India Economics Amitendu Palit, 2017-07-05 A review of the existing literature on the China-India comparative theme conveys the distinct impression that the literature largely projects China and India as intrinsically competitive entities. While much has been written on where and why China and India are contesting, particularly from a political sense, very little attention has been devoted to mutual collaboration, whether existing or potential. Such possibilities are at their greatest in economics, which will dominate the future China-India relationship. This book explores Sino-Indian ties from a comparative economic perspective and argues that it is erroneous to visualise the ties either from exclusively competitive or collaborative perspectives. The future relationship between the two countries will be characterised simultaneously by two 'C's': competition and collaboration, which are both linked to common challenges facing them. Arguing that while competition in the economic sphere is inevitable, given their size and aspirations, the book contends that negative externalities from competition will encourage both countries to collaborate and expand the scope of such collaboration. The book's refreshing angle makes it a must-read for those interested in Sino-Indian relationship.

**International Trade Negotiations and Domestic Politics** Oluf Langhelle, 2013-08-29 In spite of many years of negotiation on trade liberalization, progress seems to have stalled. This book explores why resistance to further market liberalization seems so strong, given that the benefits are seen to outweigh the costs. This volume argues that in order to understand the slow progress of World Trade Organization negotiations, we need to take into consideration the 'intermestic' character of trade politics, that is, the way in which international and domestic aspects of politics and policies have been woven together and become inextricably related to each other. This is a general trend in our globalizing world, and one that is most pronounced in the case of trade politics and policy. International Trade Negotiations and Domestic Politics therefore presents an in-depth analysis of institutions, ideas, interests and actors in the interplay between international trade negotiations and national negotiating positions. At the international level the authors focus on the multilateral negotiations within the World Trade Organization, together with the plurilateral and bilateral negotiations on free trade agreements. At the regional and domestic level they analyze the trade politics and policies of two established powers, the European Union and the USA; two rising powers, China and India; and a small industrialized country with an open economy, Norway.

**The Third Globalization** Dan Breznitz, John Zysman, 2013-04-25 Given the powerfully negative and ongoing impact of the Great Recession on western economies, the question of whether historically wealthy nations—the US, Western European countries, Japan—can stay wealthy has become an overriding concern for virtually every interested observer. In *The Third Globalization*, eminent political economists Dan Breznitz and John Zysman gather some of the discipline's leading scholars to assess the prospects for growth and prosperity among advanced industrial nations.

*Sociology of Work* Vicki Smith, 2013-05-16 The simple act of going to work every day is an integral part of all societies across the globe. It is an ingrained social contract: we all work to survive. But it goes beyond physical survival. Psychologists have equated losing a job with the trauma of divorce or a family death, and enormous issues arise, from financial panic to sinking self-esteem. Through work, we build our self-identity, our lifestyle, and our aspirations. How did it come about that work dominates so many parts of our lives and our psyche? This multi-disciplinary encyclopedia covers curricular subjects that seek to address that question, ranging from business and management to anthropology, sociology, social history, psychology, politics, economics, and health. Features & Benefits: International and comparative coverage. 335 signed entries, A-to-Z, fill 2 volumes in print and electronic formats. Cross-References and Suggestions for Further Readings guide readers to additional resources. A Chronology provides students with historical perspective of the sociology of work. In the electronic version, the comprehensive Index combines with the Cross-References and thematic Reader's Guide themes to provide robust search-and-browse capabilities.

**Automotive Fuels Reference Book, Fourth Edition** Paul Richards,Jim Barker,2023-11-15 The earlier editions of this title have been best-selling definitive references for those needing technical information about automotive fuels. This long-awaited latest edition has been thoroughly revised and updated, yet retains the original fundamental fuels information that readers find so useful, This book is written for those with an interest in or a need to understand automotive fuels. Because automotive fuels can no longer be developed in isolation from the engines that will convert the fuel into the power necessary to drive our automobiles, knowledge of automotive fuels will also be essential to those working with automotive engines. Small quantities of fuel additives increasingly play an important role in bridging the gap that often exists between fuel that can easily be produced and fuel that is needed by the ever-more sophisticated automotive engine. This book pulls together in a single, extensively referenced volume, the three different but related topics of automotive fuels, fuel additives, and engines, and shows how all three areas work together. It includes a brief history of automotive fuels development, followed by chapters on automotive fuels manufacture from crude oil and other fossil sources. One chapter is dedicated to the manufacture of automotive fuels and fuel blending components from renewable sources, including e-fuels. The safe handling, transport, and storage of fuels, from all sources, are covered. New combustion systems to achieve reduced emissions and increased efficiency are discussed, and the way in which the fuels' physical and chemical characteristics affect these combustion processes and the emissions produced are included. As CO<sub>2</sub> is now an important emission there is also discussion regarding low and non-carbon fuels and how they might be used. There is also discussion on engine fuel system development and how these different systems affect the corresponding fuel requirements. Because the book is for a global market, fuel system technologies that only exist in the legacy fleet in some markets are included. The way in which fuel requirements are developed and specified is discussed. This covers test methods from simple laboratory bench tests, through engine testing, and long-term test procedures. (ISBN 9781468605785, ISBN 9781468605792, ISBN 9781468605808, DOI 10.4271/9781468605792)

International Trade and Transportation Infrastructure Development Juan Carlos Villa,Maria Boile,Sotirios Theofanis,2020-05-08 International Trade and Transportation Infrastructure Development: Experiences in North America and Europe examines the impact of trade agreements, such as the North American Trade Agreement (NAFTA) and the European Union Customs Union, and their relationship to transportation systems and infrastructure in member countries. It analyzes historical trade by mode, evaluating modal shifts due to trade policy and disputes, and their implications for all involved nations. This book also examines both supply and demand trends, reviewing transportation processes, and the stakeholders involved. Capacity development, funding mechanisms, and operational characteristics of each mode are detailed in relation to the policies that influence them. The book reviews recent trends and the impact of disruptive technologies, as well as future potential regulatory changes, with relation to upcoming infrastructure plans, project funding, and operations. This book is an ideal reference for transportation practitioners involved in planning, feasibility studies, consultation and policy for international transportation systems or infrastructure. Academic researchers and graduate students in transportation planning, international relations, and trade will also find this book useful. Compiles in one source up-to-date insights on important public transport themes, issues, and debates Examines a wide range of public transport topics in the multidisciplinary fields of economics, policy, operations, and planning Bridges the gap between scientific research and policy implementation

Free Trade Agreements and Global Labour Governance Adrian Smith, James Harrison, Liam Campling, Ben Richardson, Mirela Barbu, 2020-09-07 Exploring the contentious relationship between trade and labour, this book looks at the impact of the EU's 'new generation' free trade agreements on workers. Drawing upon extensive original research, including over 200 interviews with key actors across the EU and its trading partners, it considers the effectiveness of the trade-labour linkage in an era of global value chains. The EU believes trade can work for all, claiming that labour provisions in its free trade agreements ensure that economic growth and high labour standards go hand-in-hand. Yet whether these actually make a difference to workers is strongly contested. This book explains why labour provisions have been profoundly limited in the EU's agreements with the CARIFORUM group, South Korea and Moldova. It also shows how the provisions were mismatched with the most pressing workplace concerns in the key export industries of sugar, automobiles and clothing, and how these concerns were exacerbated by the agreements' commercial provisions. This pioneering approach to studying the trade-labour linkage provides insights into key debates on the role of civil society in trade governance, the relationship between public and private labour regulation, and the progressive possibilities for trade policy in the twenty-first century. This book will appeal to research scholars, post-graduate students, trade policy practitioners, policy researchers allied to labour movements, and informed activists.

**Proactive and Dynamic Network Defense** Cliff Wang, Zhuo Lu, 2019-05-22 This book discusses and summarizes current research issues, identifies challenges, and outlines future directions for proactive and dynamic network defense. This book also presents the latest fundamental research results toward understanding proactive and dynamic network defense by top researchers in related areas. It includes research results that offer formal frameworks to define proactive and dynamic network defense, and develop

novel models to analyze and evaluate proactive designs and strategies in computer systems, network systems, cyber-physical systems and wireless networks. A wide variety of scientific techniques have been highlighted to study these problems in the fundamental domain. As the convergence of our physical and digital worlds grows fast pace, protecting information systems from being tampered or unauthorized access is becoming one of the most importance issues. The traditional mechanisms of network defense are built upon a static, passive, and reactive nature, which has insufficient to defend against today's attackers that attempt to persistently analyze, probe, circumvent or fool such mechanisms. It has not yet been fully investigated to address the early stage of “cyber kill chain” when adversaries carry out sophisticated reconnaissance to plan attacks against a defense system. Recently, proactive and dynamic network defense has been proposed as an important alternative towards comprehensive network defense. Two representative types of such defense are moving target defense (MTD) and deception-based techniques. These emerging approaches show great promise to proactively disrupt the cyber-attack kill chain and are increasingly gaining interest within both academia and industry. However, these approaches are still in their preliminary design stage. Despite the promising potential, there are research issues yet to be solved regarding the effectiveness, efficiency, costs and usability of such approaches. In addition, it is also necessary to identify future research directions and challenges, which is an essential step towards fully embracing proactive and dynamic network defense. This book will serve as a great introduction for advanced-level computer science and engineering students who would like to start R&D efforts in the field of proactive and dynamic network defense. Researchers and professionals who work in this related field will also find this book useful as a reference.
