Artificial Perception and Music Recognition Andranick S.

Tanguiane, 1993-10-20 This monograph presents the author's studies in music recognition aimed at developing a computer system for automatic notation of performed music. The performance of such a system is supposed to be similar to that of speech recognition systems: acoustical data at the input and music scoreprinting at the output. The approach to pattern recognition employed is that of artificial perception, based on self-organizing input data in order to segregate patterns before their identification by artificial intelligencemethods. The special merit of the approach is that it finds optimal representations of data instead of directly recognizing patterns.

Christian Sacred Music in the Americas Andrew Shenton,Joanna Smolko,2021-02-25 Christian Sacred Music in the Americas explores the richness of Christian musical traditions and reflects the distinctive critical perspectives of the Society for Christian Scholarship in Music. This volume, edited by Andrew Shenton and Joanna Smolko, is a follow-up to SCSM's Exploring Christian Song and offers a cross-section of the most current and outstanding scholarship from an international array of writers. The essays survey a broad geographical area and demonstrate the enormous diversity of music-making and scholarship within that area. Contributors utilize interdisciplinary methodologies including media studies, cultural studies, theological studies, and different analytical and ethnographical approaches to music. While there are some studies that focus on a single country, musical figure, or region, this is the first collection to represent the vast range of sacred music in the Americas and the different approaches to studying them in context.

Music Retrieval Nicola Orio, 2006 Music Accessing and Retrieval is the first comprehensive survey of the vast new field of Music Information Retrieval (MIR). It describes a number of issues which are peculiar to the language of music - including forms, formats, and dimensions of music - together with the typologies of users and their information needs. To fulfil these needs a number of approaches are discussed, from direct search to information filtering and clustering of music documents. The emphasis is on tools, techniques, and approaches for content-based MIR, rather than on the systems that implement them. The interested reader can, however, find descriptions of more than 35 systems for music retrieval with links to their Web sites. Music Accessing and Retrieval can be used as both a guide for beginners who are embarking on research in this relatively new area, and a useful reference for established researchers in this field.

Music, Health, and Wellbeing Raymond MacDonald, Gunter Kreutz, Laura Mitchell, 2013-05-02 Music has a universal and timeless potential to influence how we feel, yet, only recently, have researchers begun to explore and understand the positive effects that music can have on our wellbeing. This book brings together research from a number of disciplines to explore the relationship between music, health and wellbeing.
