Choosing and Using Audio and Music Software Mike Collins,2004-03-08 This comprehensive reference features all the major audio software: SONAR XL; Cubase SX; Logic Audio Platinum; Digital Performer; Nuendo; Pro Tools; Peak; Spark XL; SonicWorx; Audition (Cool Edit Pro); WaveLab; Sound Forge. If you need advice on which systems to purchase, which are most suitable for particular projects, and on moving between platforms mid-project, this book should be your one-stop reference. Mike Collins is a trainer and consultant who has been tackling these issues for years and his expert advice will save you time and money. Each section covers a specific system, providing a handy overview of its key features and benefits, including help with setup. Hints and Tips appear throughout these sections, addressing issues such as how to record drum loops using a virtual drum-machine, recording basslines and keyboard pads using virtual synthesizers, and adding strings, brass or other instruments using virtual samplers. Mike then illustrates how to convert these MIDI recordings into audio tracks to mix alongside vocals, guitars and any other real instruments. The many short tutorials provide both a source of comparison and means to get up to speed fast on any given software. Mike Collins is a music technology consultant and writer who has been making music in London's recording studios variously as a MIDI programmer, session musician, recording engineer, producer and arranger since 1981. He offers freelance Pro Tools engineering, consultancy, troubleshooting and personal tuition, as well as presenting seminars and lectures on related music technology and audio recording topics. Mike has written over 500 articles for magazines such as Macworld (UK), Pro Sound News Europe, Sound on Sound and AudioMedia, and for Electronic Musician and MIX in the USA. Mike's wide-ranging career and experience enables him to bring excellent insight from all sides into his writing, from technical detail to creative expression. Starting out as a musician and club DJ in the 1970's, Mike moved into professional recording in the 1980's, initially as a Songwriter/Producer for EMI Records. Later he worked as a Songwriter for Chappell Music; as a Film Sound Consultant for Dolby Labs; as a Music Producer for TV recordings; and as Senior Recording Engineer and Music Technology Specialist at Yamaha's London R & D Studio. Throughout the 1990's Mike worked as a MIDI Programmer on records, films and music tours with bands such as the Shamen and film composers such as Ryuichi Sakamoto and David Arnold. Mike was Executive Consultant to Re-Pro (The Guild of Record Producers and Engineers) between 1996 and 1999 and Technical Consultant to the Music Producers Guild (MPG), contributing to the Education Group and organising and presenting Technical Seminars between 1999 and 2002. He has a BSc in Electroacoustics and an MSc in Music Information Technology.

Music and the Personal Computer ,1989-10-25 Over the past six years personal computers have carved a deep niche in the music world. This widespread popularity is largely due to the establishment of the MIDI (Musical Instrument Digital Interface) standard in 1983. This communications protocol allows computers to send, receive, and store digital information generated by various electronic musical instruments. In addition to numerous writings exploring the possibilities of present and future technology, this annotated bibliography offers educators many introductory sources, articles on how to evaluate and purchase equipment, and directories of available software. Specifically, it provides a collection of source material, an overview of significant publications in the field, and serves as a point of departure for further inquiry. Part I of the bibliography is divided into seven sections, each devoted to information regarding a specific computer. Articles written about two or more popular computers or models not covered elsewhere are detailed in part II. Music education is the subject of Part III and Part IV lists and annotates significant books. The appendix contains information on associations involved with the musical applications of personal computers and brief descriptions of several popular online services. Author and subject indexes are also included. Music and the Personal Computer covers a variety of topics that will be of interest to practicing musicians, music educators, and computer enthusiasts with interests in music.

Chapter 2 covers print music royalties, copyright laws, formats and terms, while the last three chapters consist of annotated listings of 600+ music software titles, 6,000+ music-related web sites for musicians, and Internet tech terms.

It's also about writing scripts, producing videos with your camcorder, and using your personal computer hooked to your camcorder with a cable to transfer information or videos, sound, or other content to your computer. This book gives you practical information about working online at home with flexible hours—either part or full time. How to Make Money Organizing Information is for all ages and all situations. It doesn't matter whether you're home-based, have a disability, are over age 60 or a young student who wants to work part time, or need a full-time business to support yourself and your family. More than 26 businesses described can be operated using either a computer or camcorder or both linked together to transfer text, graphics, or sound at the same or different times. The guidebook is about how to start on a tight budget and operate many low-capital businesses dealing with the creation, development, and dissemination of information of all kinds for a variety of businesses and purposes. Part Two of the book is about writing for the new media/digital media and how to sell or launch your freelance writing in the media before it is published. The chapters focus on how to create, promote, and sell your information and how to research your intended markets. You can start many types of businesses at home part time from gift baskets to making dolls for medical offices, but these business-based homes work with information online and on disk, in print, and sent through e-mail attachments. Check out the associations and training programs information in the appendices.

Composing Electronic Music Curtis Roads,2015-06-17 Electronic music evokes new sensations, feelings, and thoughts in both composers and listeners. Opening the door to an unlimited universe of sound, it engages spatialization as an integral aspect of composition and focuses on sound transformation as a core structural strategy. In this new domain, pitch occurs as a flowing and ephemeral substance that can be bent, modulated, or dissolved into noise. Similarly, time occurs not merely as a fixed duration subdivided by ratios, but as a plastic medium that can be generated, modulated, reversed, warped, scrambled, and granulated. Envelope and waveform undulations on all time scales interweave to generate form. The power of algorithmic methods amplify the capabilities of music technology. Taken together, these constitute game-changing possibilities. This convergence of technical and aesthetic trends prompts the need for a new text focused on the opportunities of a sound oriented, multiscale approach to composition of electronic music. Sound oriented means a practice that takes place in the presence of sound. Multiscale means an approach that takes into account the perceptual and physical reality of multiple, interacting time scales—each of which can be composed. After more than a century of research and development, now is an appropriate moment to step back and reevaluate all that has changed under the ground of artistic practice. Composing Electronic Music outlines a new theory of composition based on the toolkit of electronic music techniques. The theory consists of a framework of concepts and a vocabulary of terms describing musical materials, their transformation, and their organization. Central to this discourse is the notion of narrative structure in composition—how sounds are born, interact, transform, and die. It presents a guidebook: a tour of facts, history, commentary, opinions, and pointers to interesting ideas and new possibilities to consider and explore.
