Sonata Eroica No.2 - Set to Music for Organ Solo - Op.151 Charles Villiers Stanford,2018-12-14 Charles V. Stanford's Sonata Eroica No.2, Op.152 is a musical composition for solo organ in three movements, first composed during the spring of 1917 and published the same year by Stainer & Bell, London. The piece is dedicated to M. Charles-Marie Widor and the great country to which he belongs. The three movements of this piece are: Rheims - Allegro moderato, Tempo di Marcia solenne, and Verdun - Allegro moderato. On average, a performance of this particular piece requires 20-25 minutes. Sir Charles Villiers Stanford (1852 - 1924) was an Irish composer, conductor, and teacher of music. He was educated at the University of Cambridge and continued his studies in Berlin and Leipzig. He was a very influential composer, responsible for making Cambridge University Musical Society an internationally-acclaimed organisation. Stanford was also a profuse composer, producing a large corpus of work in many genres; however, he is perhaps best remembered for his Anglican choral works for church performance. His music eventually became overshadowed by that of Edward Elgar and a number of his former pupils in the in the 20th century. Presented clearly with room for notes and annotations, this volume is ideal for students and those with an interest in learning to play one of Stanford's masterpieces. Many vintage books such as this are becoming increasingly scarce and expensive. We are republishing this volume now in a modern, high-quality edition complete with a specially commissioned new introduction on the history of musical notation.

Musical Notation in the West James Grier,2021-02-18 Musical notation is a powerful system of communication between musicians, using sophisticated symbolic, primarily non-verbal means to express musical events in visual symbols. Many musicians take the system for granted, having internalized it and their strategies for reading it and translating it into sound over long years of study and practice. This book traces the development of that system by combining chronological and thematic approaches to show the historical and musical context in which these developments took place. Simultaneously, the book considers the way in which this symbolic language communicates to those literate in it, discussing how its features facilitate or hinder fluent comprehension in the real-time environment of performance. Moreover, the topic of musical as opposed to notational innovation forms another thread of the treatment, as the author investigates instances where musical developments stimulated notational attributes, or notational innovations made practicable advances in musical style.

Henry Fothergill Chorley Robert Terrell Bledsoe,2018-12-21 First published in 1998, this book focuses on the once celebrated but now neglected musical journalism of Henry Fothergill Chorley. For nearly forty years he effectively used his acerbic pen and idiosyncratic critical judgments to celebrate the works of Rossini, Mendelssohn, Meyerbeer, Gounod and Sullivan, and to scorn those of Schumann , Verdi and Wagner. This book also discusses his friendships with literary figures such as Charles Dickens, Elizabeth Barrett Browning, and Felicia Hemans, as well as his ongoing efforts to establish himself as a novelist as well as a journalist.

Singing Alexandria Lucia Prauscello,2017-07-31 This book provides a thorough and challenging analysis of the self-defining identities of texts set to music in the ancient Greek world, redefining our knowledge of the transmission of ancient Greek music.

Lexicon of Musical Invective Nicolas Slonimsky,2000-08 An anthology of critical assaults on well-known composers and their works written by the late Nicolas Slonimsky--writer, lexicographer, pianist, composer, conductor, teacher, and in his own words, legendary...musicologist of manifold endeavors [and] failed wunderkind. It also includes his *Invecticon*, an index to the nasty words and phrases found in the book. This is a reprint of the 1953 edition with a new foreword by Peter Schickele who describes the collection as funny and instructive. c. Book News Inc.

Describing Music Materials Richard P. Smiraglia,2016-11-14 This fourth edition was prepared in 2015-2016 as a supplementary text for a graduate music cataloging course. This edition is rewritten to a large extent to conform to the new instructions and paradigms represented in Resource Description and Access (RDA). RDA instructions for printed music, recorded music and music video are accompanied by advice, examples, illustrations and complete catalog records, including versions in MARC21 format. Consistent with RDA, the chapter on form and choice of access points found in earlier editions is gone, replaced with a chapter on authorized access points. The concept of "uniform title" has evolved into the concept of the "preferred title," as part of an authorized access point, which might require manipulation and addition of some elements for disambiguation and collocation. Only three chapters are used for description of printed music, sound recordings and video recordings. Many of the older LP examples were removed as were VHS video recordings. Multimedia packages are now rare in the marketplace, but streaming audio and video are quite evident so examples now include those media. Facsimile examples from the third edition have been retained and many new examples have been added. Most catalogers today are using RDA in combination with MARC21. Accordingly, in an appendix, we have rendered each example in MARC21 format using the OCLC Connexion approach to MARC21 record formatting.A lengthy bibliography in earlier editions has been replaced by a brief list in the introduction, with pointers to online

resources that are both current and constantly updated by working catalogers.

Experimental Techniques in Human Neuropsychology H. Julia Hannay,1986 This unique sourcebook describes the research methods used to study human brain function and brain-behavior relationships. These range from relatively simple approaches, such as dichotic listening and tachistoscopic presentation, to computerized techniques such as cerebral blood flow measurements. The description of each method covers the underlying theory, variations on the basic paradigm, dependent measures, reliability and validity, and the equipment required. The authors also critically review research with normal and clinical populations. Because of the rapid expansion of the field of human neuropsychology--and accompanying technological advances--this volume will be valued as much by experienced researchers as by newcomers seeking an introduction to the variety of available procedures.

Humanity at the Crossroads Garth J. Hallett,2015-06-19 Humanity at the Crossroads attempts to answer questions regarding the effect of technological progress on our lives. This book concludes that the very technology which threatens to destroy us, not merely its more favorable offshoots, is itself the catalyst for that better world we may yet hope to inhabit.
