**Flame Spectroscopy: Atlas of Spectral Lines** M. L. Parsons, 2012-12-06 This atlas was begun mainly to gather together information on atomic absorption spectral lines for the use of practicing analytical chemists, who often find it necessary to use less sensitive lines. It was hoped that pertinent data could be obtained and for the first time published in a single format in one place. This effort led to the realization that many workers in the field employ atomic emission and atomic absorption as complementary techniques. Therefore, it was decided to include both of these techniques in the atlas. Finally, it was decided that because atomic fluorescence spectroscopy shows so much promise as an analytical tool, the available data for this method should be included as well. Since these three techniques provide fruitful research areas today, it is not possible to prepare a compilation of this scope and remain completely up to date. For practical reasons a cutoff date has to be set at which organization and typing begin. For this atlas, in most cases the literature references are complete through 1969. It is felt, however, that the absence of later references, especially in the areas of flame emission spectroscopy and atomic absorption spectroscopy, will not impair the usefulness of the atlas for the practicing analyst to any great degree. v

**ACKNOWLEDGMENTS** The authors are greatly indebted to Dr. J. D. Winefordner, who gathered together most of the information on atomic fluorescence spectroscopy, using a different format. The authors are also indebted to Mrs. Betty Bulechek, the typist.

Avian Models for Social Cohesion Andras Csillag, Gergely Zachar, Giorgio Vallortigara, 2020-02-10 Animals living in groups are often linked to group or family members stronger than to other conspecifics, and form stronger coalitions (often based on genetic relatedness) within such groups. Effective cooperation within a group requires the preference for proximity of group members,

suppression of aggression toward conspecifics, an ability to perceive and respond to social signals and to change (often synchronize) behavior accordingly. Birds have long been used for a number of investigations involving sensory perception, learning, feeding strategies and vocal communication. Recently, they have been proposed as ideal model species even for psychiatric disorders affecting social cohesion, such as autism spectrum disorder. The physiological mechanisms and neural systems underlying different forms of sociability (sexual and parental bonding, group preference, nesting, care for offspring, migration) can often be studied easier in birds, since their social behavioral repertoire, as a taxon (but sometimes also as individuals), is more diverse than that of mammals. By contrast with laboratory rodents, birds rely less on olfactory cues. Rather, they tend to use visual and acoustic signals for social interactions, much like humans. Comparative approach and evolutionary relevance of studies using avian species have already yielded valuable results in several fields of neuroscience: learning and memory (imprinting), acoustic communication (birdsong), neurogenesis (seasonal changes in the song network). With the advent of robust novel methods in molecular biology, genomics and proteomics, information technology and electronic engineering; and also based upon an ever improving battery of behavioral tests, avian research in social cohesion has likely gained a new impetus.

*Pharmacology* G. A. Kerkut, 2016-04-20 Over the past 25 years insect pharmacology has grown from a fledgling subject to one that occupies a major field of science. Volume II reviews insect pharmacology past and present and effectively captures the growing confidence which imbues the world of the insect pharmacologist. It contains 15 chapters written in authoritative fashion by leading scientists and is fully illustrated and referenced. Insect preparations are proving ideal for resolving problems in pharmacology which have general significance, particularly at the molecular and

genetic levels. This volume contains a wealth of data, information and ideas and will therefore be a valuable asset to all in academic or industrial research concerned with the science and control of insects.

**Electroreceptors and Other Specialized Receptors in Lower Vertebrates** T.H. Bullock,A. Fessard,R.H. Hartline,A.J. Kalmijn,P. Laurent,R.W. Murray,H. Scheich,E. Schwartz,T. Szabo,2012-12-06 The originality of this volume is to reveal to the reader the fascination of some unfamiliar sensory organs that are sometimes ignored and often misunderstood. These receptors have only recently been identified and their functional specificity is in some cases still a matter for discussion. The four classes of sensory organs considered here differ widely from one another in many respects. One might even say that the only thing they have in common is that they belong to cold-blooded vertebrates. These classes are: 1. the directionally sensitive lateral-line mechanoreceptors of fishes and amphi bians (Chapter 7); 2. the pseudobranchial organs of some teleosts, equipped with pressoreceptors and at least three other types of receptors (osmo- and chemoreceptors) (Chapter 8); 3. the infrared-sensitive pit organs of some snake families (Chapter 9) ; 4. the various kinds of electroreceptors found in several marine and freshwater fish families (Chapters 2 to 6). The first three classes of receptors mentioned above thus rate only one chapter each, whereas five chapters are devoted to the electroreceptors. Electroreception has aroused enormous interest among physiologists in specialties ranging from molecular biology to animal behavior. The resulting quantity of research and discussion fully justifies this disproportion. However, it cannot be denied that the contents of the volume must appear unbalanced and heterogeneous, yet it should not be perceived as a mere juxtaposition of particular and unrelated cases.

The Town of Vichy and the Politics of Identity Kirrily Freeman, 2022-01-31 This book explores the contours of civic identity in the town of Vichy, France. Over the course of its history, Vichy has been known for three things: its thermal spa resort; its products (especially Vichy water and Vichy cosmetics); and its role in hosting the État Français, France's collaborationist government in the Second World War. This last association has become an obsession for the residents of Vichy, who feel stigmatized and victimized by the widespread habit of referring to France's wartime government as the 'Vichy regime'. This book argues that the stigma, victimhood, and decline suffered by Vichyssois are best understood by placing Vichy's politics of identity in a broader historical context that considers corporate, as well as social and cultural, history.

*Ageing, Gender and Sexuality* Sue Westwood, 2016-03-10 Ageing, Gender and Sexuality focuses on the experiences of older lesbian, gay and bisexual (LGB) individuals, in order to analyse how ageing, gender and sexuality intersect to produce particular inequalities relating to resources,

recognition and representation in later life. The book adopts a feminist socio-legal perspective to propose that these inequalities are informed by and play out in relation to temporal, spatial and regulatory contexts. Discussing topics such as ageing sexual subjectivities, ageing kinship formations, classed trajectories and anticipated care futures, this book provides a new perspective on older individuals in same-sex relationships, including those who choose not to label their sexualities. Drawing upon recent empirical data, the book offers new theoretical approaches for understanding the intersectionality of ageing, gender and sexuality, as well as analysing the social policy implications of these findings. With an emphasis on the accounts of individuals who have experienced the dramatically changing socio-legal landscape for LGB people first-hand, this book is essential reading for students, scholars and policymakers working in the areas of: gender and sexuality studies; ageing studies and gerontology; gender, sexuality and law; equality and human rights; sociology; socio-legal studies; and social policy. *Ageing, Gender and Sexuality* won the Socio-Legal Studies Association (SLSA) Hart Prize for Early Career Academics for 2017.

*Organization in the Spinal Cord* A. G. Brown, 2012-12-06 The research described in this book arose, in large part, from a sense of frustration. For a number of years I had been studying the physiology of the spinocervical tract, a somatosensory pathway, in the cat's spinal cord. But I did not know, precisely, where the cells of origin of the tract were located and therefore did not know what they looked like or whether there were any correlations between structure and function. It was true that electrophysiological experiments had indicated their probable situation in the dorsal horn, and anatomical work had described the morphology of cells that were likely to give rise to the axons of the tract; but this was not satisfactory. With the publication, by Stretton and Kravitz in 1968, of the Procion Yellow ionophoretic method for intracellular staining, a new tool became available for

studying the morphology of physiologically identified neurones. We used the techniques and, although very pleased with the beautiful appearance of the dendritic trees of neurones seen in the fluorescence microscope, we were again frustrated, this time by the inability of Procion Yellow to stain axons for any considerable length. Therefore, P. K. Rose and P. J. Snow and I began to try to develop a method that would stain the axon, together with its collaterals, in addition to the soma and dendrites of an intracellularly recorded neurone.
