Players Making Decisions Zack Hiwiler, 2015-12-09

Game designers today are expected to have an arsenal of multi-disciplinary skills at their disposal in the fields of art and design, computer programming, psychology, economics, composition, education, mythology—and the list goes on. How do you distill a vast universe down to a few salient points? *Players Making Decisions* brings together the wide range of topics that are most often taught in modern game design courses and focuses on the core concepts that will be useful for students for years to come. A common theme to many of these concepts is the art and craft of creating games in which players are engaged by making meaningful decisions. It is the decision to move right or left, to pass versus shoot, or to develop one's own strategy that makes the game enjoyable to the player. As a game designer, you are never entirely certain of who your audience will be, but you can enter their world and offer a state of focus and concentration on a task that is intrinsically rewarding. This detailed and easy-to-follow guide to game design is for both digital and analog game designers alike and some of its features include: A clear introduction to the discipline of game design, how game development teams work, and the game development process Full details on prototyping and playtesting, from paper prototypes to intellectual property protection issues A detailed discussion of cognitive biases and human decision making as it pertains to games Thorough coverage of key game elements, with practical discussions of game mechanics, dynamics, and aesthetics Practical coverage of using simulation tools to decode the magic of game balance A full section on the game design business, and how to create a sustainable lifestyle within it

Future Narratives Christoph Bode, Rainer

Dietrich, 2013-10-29 This head volume of the 'Narrating Futures' series defines and identifies Future Narratives. It parses their characteristic features and aims at an abstract classification of the whole corpus, irrespective of its concrete manifestations across the media. Drawing on different theorems and approaches, it offers a unified theory and a poetics of Future Narratives. Locating the media-historical moment of their emergence, this volume paves the way for the following volumes, which deal with

how Future Narratives are refracted through different media.

Secrets of Opening Surprises Jeroen Bosch, 2009 No time to study chess opening theory? *Secrets of Opening Surprises* (SOS) consists of highly playable, unusual opening ideas. Because an SOS is such an early deviation from the regular lines in mainstream openings (usually before move six), the probability of you being able to bring the variation actually on the board is very high. If you are tired of main lines, if you are looking for simple but effective weapons to perplex your opponent, then you will feel very much at home in the world of SOS.

Exploring Writing John Langan, 2007

Learning to Work, 1995 The Senate Committee on Labor and Human Resources and the House Committee on Education and Labor (now the House Committee on Economic and Educational Opportunities) asked the Office of Technology Assessment to examine the potential opportunities and possible pitfalls of work-based learning that would be supported by the School to Work Opportunities Act (STWOA). Three main questions are addressed: (1) What are the alternative models of work-based learning and how effective are they? (2) What new learning technologies could support work-based learning? and (3) How can employers be persuaded to provide work-based learning experiences for students? This report assesses the potential of work-based learning as a component of the school-to-work transition systems that are currently being developed in many states and local school districts. Chapter 1 reports the findings about work-based learning and the STWOA. Chapter 2 discusses the history of work-based learning in the United States as well as problems with school-to-work transitions and provides an overview of STWOA. Chapter 3 describes and analyzes the apparent advantages and disadvantages of five learning processes that can be used in work settings: experiential learning, work-group learning, mentoring, workplace instruction, and technology-assisted learning. Chapter 4 discusses various ways that work-based learning can be structured with respect to the following: the types of students who are served; the program objectives; the coordination with schooling; the timing, intensity, duration, and progression of work-based experiences; the settings of work-based learning; and the issue of payment for students. Chapter 5 describes various models of school-to-work transition programs with work-based learning and

summarizes the evidence on their effectiveness. These models are youth apprenticeships, clinical training, cooperative education, school-to-apprenticeship programs, school-based enterprises, and career academies. Chapter 6 considers the factors that influence whether or not employers will participate in work-based learning programs. (YLB)
