Turning Joy L. Smith,2022-03 Before the accident Genie was an aspiring ballerina, a star pupil at her exclusive New York dance school, now she is a bitter teenager, permanently confined to a wheelchair, shutting herself off from her friends, her beloved teacher, and even her mother; but at physical therapy she meets Kyle, a gymnast whose traumatic brain injury has landed him in therapy--and through their growing friendship Genie realizes that she has to confront the things around her: like the booze her mother is hiding, or the fact that maybe her fall was not entirely accidental.

The Mystery of Yawning in Physiology and Disease Olivier Walusinski,2010-01-01 Yawning is a stereotyped phylogenetically ancient phenomenon that occurs in almost all vertebrates. As an emotional behavior and an expressive movement, yawning has many consequences; nevertheless, it has so far been poorly addressed in medical research and practice. Bringing together the latest research from many fields, this volume integrates current insights within embryology, ethology, neurophysiology, psychology, fMRI and pathology. The phylogenetic and ontogenetic aspects of yawning offer an interesting perspective on human development, and its occurrence in neurological diseases - an area explored by only a few investigators - may provide useful clinical information. This book will make valuable and fascinating reading to neurologists, sleep specialists, psychologists, ethologists and pharmacologists, as well as to anybody interested in uncovering the mystery of yawning.

GUARDIAN ANGEL Alan Kinder-Cooke,2020-01-31 Do we have a soul? Is there any meaning to this earthly life? Science can answer many questions, but it does not give us the answers to some of life's greatest mysteries. Why are we here? Is there a God or creator of the universe? What is the meaning of life? In Guardian Angel, Alan Kinder-Cooke examines these perplexing and eternal questions. Looking to his inner self and guardian angel, he writes this book to help others on the path to enlightenment and to oneness with the Soul.

Chronic Postsurgical Pain Gérard Mick, Virginie Guastella, 2014-02-20 Primum non nocere... The fact that a surgical procedure can leave any kind of pain casts a shadow over this tenet, which is seen as the basis of medical practice and anchor of its principle ethic... It is all the more surprising in that medicine has only paid attention to this paradoxical chronic pain situation for the past few years. Clarifying the knowledge acquired in this field has become all the more urgent for any care-giver today confronted by a legitimate request from patients: Why and how can a surgical procedure, which is supposed to bring relief, leave behind an unacceptable sequela? This is the approach which the contributors to this new subject of major clinical interest invite you to follow as you work your way through this book.

Spasticity, Second Edition Allison Brashear, MD, 2015-12-09 Since publication of the first edition, *Spasticity: Diagnosis and Management* has been the defining reference and go-to source for physicians, therapists, and other healthcare providers who care for patients with spasticity. For this new updated edition, Dr. Brashear and a diverse team of specialists have come together to integrate new research, clinical trials, measurement tools, therapies, and other recent advances that reflect this evolving field. The book is organized into four sections, each of which covers a broad scope of material. The first is a general overview of spasticity and its effects on movement in patients. Other chapters cover epidemiology and ancillary findings commonly associated with spasticity. Part II details assessment tools and measurements, treatment goals, and how to aim for realistic outcomes. Part III outlines various treatment modalities, including heavily updated chapters on the use of botulinum toxin in the upper and lower extremities, guidance techniques

for injections, intrathecal baclofen, neuromodulation, surgery, physical therapy, and more. The last section, which contains several new chapters, discusses evaluation of outcomes and management of patients with stroke, traumatic brain injury, spinal cord injuries, multiple sclerosis, cerebral palsy, and cancer, followed by chapters on spasticity management in long-term care facilities and economic considerations. This book remains the most comprehensive guide to diagnosis and management of spasticity in adults and children, and the revised second edition will continue to serve as an invaluable resource for professionals in any discipline who strive to provide quality care to spasticity patients. Key Features: Revised edition of the premier clinical reference on spasticity Incorporates the latest advances in assessment and treatment Contains six entirely new chapters highlighting key topics including Tardieu scale and other measurement tools, ultrasound guidance for botulinum toxin management, spasticity in special populations, emerging therapies, and economic impact More than 200 figures and 70 tables accompany the updated text

Spinal Control: The Rehabilitation of Back Pain E-Book Paul W. Hodges, Jacek Cholewicki, Jaap H van Dieen, 2013-08-19 For the first time, international scientific and clinical leaders have collaborated to present this exclusive book which integrates state-of-the-art engineering concepts of spine control into clinically relevant approaches for the rehabilitation of low back pain. Spinal Control identifies the scope of the problem around motor control of the spine and pelvis while defining key terminology and methods as well as placing experimental findings into context. Spinal Control also includes contributions that put forward different sides of critical arguments (e.g. whether or not to focus on training the deep muscles of the trunk) and then bring these arguments together to help both scientists and clinicians better understand the convergences and divergences within this field. On the one hand, this book seeks to resolve many of the issues that are debated in existing literature, while on the other, its contributing opinion leaders present current best practice on how to study the questions facing the field of spine control, and then go on to outline the key directions for future research. Spinal Control – the only expert resource which provides a trusted, consensus approach to low back pain rehabilitation for both clinicians and scientists alike! Covers the most important issues in spine control research Illustrates the clinical relevance of research and how this is or can be applied in clinical practice Edited and written by world leading experts, contributing first class content on different aspects of spine control Chapters that bring together the expertise of these world leaders on topics such as neuromotor mechanisms of spine control, proprioception, subgrouping in back pain and modelling spine stability An extensive and illustrated clinical consensus chapter that brings together the philosophies of clinical opinion leaders for the first time

Physiology And Pharmacology of Cardio-Respiratory Control Albert Dahan, Luc Teppema, Johannes H.G.M. van Beek, 2011-06-27 On 15 November 1997, the first international symposium Neural and Chemical Control of Breathing: Pharmacological and Clinical Aspects was held at Leiden University Medical Center on the occasion of the retirement of one of the members of the Control of Breathing Research Group of the Departments of Physiology and Anesthesiology, Dr. Aad Berkenbosch. Among others, Dr. Berkenbosch, played an important role in this research group, which made a large and significant contribution to

scientific research on the regulation of breathing. This book presents the proceedings of that meeting together with papers of several authors who have strong bonds with the Leiden Departments of Physiology and Anesthesiology. All studies represent state of the art work on the subject of respiratory control and cardiovascular medicine, with emphasis on the physiological, pharmacological and anesthesiological aspects of both fields. The book is divided in several sections: Oxygen Physiology. Prof. John Severinghaus presents among other things his ideas on oxygen sensing and high altitude related diseases. Prof. Honda gives results from studies in a unique set of subjects without carotid bodies. The findings of Honda's group support the idea that an intact hypoxic drive from the carotid bodies is necessary for the generation of central hypoxic depression. Dr. Hans van Beek discusses the effects of hypoxia and hypercapnia on cardiac contractility in animal models. Prof. Oeseburg demonstrates the feasibility of Near Infra Red Oximetry for monitoring tissue oxygenation in patients. Central Chemoreception.

Bad Bug Book Mark Walderhaug, 2014-01-14 The Bad Bug Book 2nd Edition, released in 2012, provides current information about the major known agents that cause foodborne illness. Each chapter in this book is about a pathogen—a bacterium, virus, or parasite—or a natural toxin that can contaminate food and cause illness. The book contains scientific and technical information about the major pathogens that cause these kinds of illnesses. A separate “consumer box” in each chapter provides non-technical information, in everyday language. The boxes describe plainly what can make you sick and, more important, how to prevent it. The information provided in this handbook is abbreviated and general in nature, and is intended for practical use. It is not intended to be a comprehensive scientific or clinical reference. The Bad Bug Book is published by the Center for Food Safety and Applied Nutrition (CFSAN) of the Food and Drug Administration (FDA), U.S. Department of Health and Human Services.
