The Chemistry of Ruthenium E.A. Seddon, K.R. Seddon, 2013-10-22 The Chemistry of Ruthenium is concerned with the chemistry of ruthenium, with emphasis on synthesis and structure. The discussion spans a wide range of fields, from coordination chemistry and organometallic chemistry to structural chemistry (of both molecular and extended lattices), electrochemistry and photochemistry, as well as kinetics and spectroscopy. Comprised of 15 chapters, this book begins with an introduction to the discovery and early history of ruthenium, along with its extraction and purification, isotopes, physical and chemical properties, and applications. The discussion then turns to the concept of oxidation state and a scheme for systematizing descriptive inorganic chemistry together with its applicability to ruthenium chemistry. Subsequent chapters focus on the chemistry of ruthenium(VIII), ruthenium(VII), ruthenium(VI), ruthenium(V), ruthenium(IV), ruthenium(III), ruthenium(II), ruthenium(I), and ruthenium(0). The book also considers ruthenium carbonyl clusters and nitrosyls before concluding with a review of the photophysics and photochemistry of tris(diimine)ruthenium(II) complexes. This monograph will be useful to students,

practitioners, and researchers in the field of inorganic chemistry, as well as those who are interested in the chemistry of ruthenium.

Teaching and Learning with Multimedia Janet Collins, Michael Hammond, Jerry Wellington, 2002-05-03 This book is an introduction to the issues and practicalities of using multimedia in classrooms - both primary and secondary, and across a range of subject areas. The book draws on material from a range of case studies and focuses on areas of concern for teachers and researchers. Using IT effectively continues to be a problem for many teachers, and there is still a long way to go toward organising this properly. The book takes a thorough look at IT in the school, discussing and examining issues such as: * IT and the National Curriculum * foreign language teaching * differing curricular needs * opportunities and constraints of groupwork * talking books and primary reading * ways in which multimedia supports readers. The book also looks at some of the more philosophical issues such as the implications of home-computers and the limits of independent learning, and the notion of edutainment - the relationship of motivation and enjoyment to learning. Finally, the book makes comparisons across the curriculum and between primary and secondary sectors and raises questions about the future of IT in schools, arguing that teachers should make a significant contribution to decisions about future development.

A Textbook of Physical Chemistry Arthur Adamson, 2012-12-02 A Textbook of Physical Chemistry, Second Edition serves as an introductory text to physical chemistry. Topics

covered range from wave mechanics and chemical bonding to molecular spectroscopy and photochemistry; ideal and nonideal gases; the three laws of thermodynamics; thermochemistry; and solutions of nonelectrolytes. The kinetics of gas-phase reactions; colloids and macromolecules; and nuclear chemistry and radiochemistry are also discussed. This edition is comprised of 22 chapters; the first of which introduces the reader to the behavior of ideal and nonideal gases, with particular emphasis on the van der Waals equation. The discussion then turns to the kinetic molecular theory of gases and the application of the Boltzmann principle to the treatment of molar polarization; dipole and magnetic moments; the phenomenology of light absorption; and classical and statistical thermodynamics. The chapters that follow focus on the traditional sequence of chemical and phase equilibria, electrochemistry, and chemical kinetics in gas phase and solution phase. This book also considers wave mechanics and its applications; molecular spectroscopy and photochemistry; and the excited state, and then concludes with an analysis of crystal structure, colloid and polymer chemistry, and radio and nuclear chemistry. This reference material is intended primarily as an introductory text for students of physical chemistry.
