Transforming Global Information and Communication Markets Peter F. Cowhey, Jonathan D.

Aronson, 2012-01-13 Innovation in information and communication technology (ICT) fuels the growth of the global economy. How ICT markets evolve depends on politics and policy, and since the 1950s periodic overhauls of ICT policy have transformed competition and innovation. For example, in the 1980s and the 1990s a revolution in communication policy (the introduction of sweeping competition) also transformed the information market. Today, the diffusion of Internet, wireless, and broadband technology, growing modularity in the design of technologies, distributed computing infrastructures, and rapidly changing business models signal another shift. This pathbreaking examination of ICT from a political economy perspective argues that continued rapid innovation and economic growth require new approaches in global governance that will reconcile diverse interests and enable competition to flourish. The authors (two of whom were architects of international ICT policy reforms in the 1990s) discuss this crucial turning point in both theoretical and practical terms.

Peer-to-peer File Sharing and Secondary Liability in Copyright Law Alain Strowel, 2009-01-01 This is a book that has a lot to offer. Many of its readers will benefit from the first chapters which comprehensively analyse the case law and put it in context, whilst others will benefit more from the more conceptual chapters and the criticism of certain points and suggestions for a way forward contained in them. Paul L.C. Torremans, European Intellectual Property Review This timely volume offers a comprehensive review of case law, in various jurisdictions, on secondary liability for copyright infringement, particularly P2P file

sharing and online infringements. Moreover, the book includes forward-looking contributions of prominent academics from the USA and the EU, which provide original perspectives on the future shape of online copyright law, looking at questions such as whether it could or even should evolve towards a compensation system. By combining these different avenues, the book will be of particular interest to practitioners, academics, researchers and legal scholars involved in the field of copyright law.

Regulating Content on Social Media Corinne Tan, 2018-03-26 How are users influenced by social media platforms when they generate content, and does this influence affect users' compliance with copyright laws? These are pressing questions in today's internet age, and Regulating Content on Social Media answers them by analysing how the behaviours of social media users are regulated from a copyright perspective. Corinne Tan, an internet governance specialist, compares copyright laws on selected social media platforms, namely Facebook, Pinterest, YouTube, Twitter and Wikipedia, with other regulatory factors such as the terms of service and the technological features of each platform. This comparison enables her to explore how each platform affects the role copyright laws play in securing compliance from their users. Through a case study detailing the content generative activities undertaken by a hypothetical user named Jane Doe, as well as drawing from empirical studies, the book argues that – in spite of copyright's purported regulation of certain behaviours – users are 'nudged' by the social media platforms themselves to behave in ways that may be inconsistent with copyright laws. Praise for Regulating Content on Social Media 'This book makes an important contribution to the field of social media and copyright. It tackles the real issue of how social media is designed to encourage users to engage in generative practices, in a sense effectively “seducing”

users into practices that involve misuse or infringement of copyright, whilst simultaneously normalising such practices.’ Melissa de Zwart, Dean of Law, Adelaide Law School, Australia This timely and accessible book examines the regulation of content generative activities across five popular social media platforms – Facebook, Pinterest, YouTube, Twitter and Wikipedia. Its in-depth, critical and comparative analysis of the platforms’ growing efforts to align terms of service and technological features with copyright law should be of great interest to anyone studying the interplay of law and new media. Peter K. Yu, Director of the Center for Law and Intellectual Property, Texas A&M University

A Crisis of Beliefs Nicola Gennaioli, Andrei Shleifer, 2020-03-10 How investor expectations move markets and the economy. The collapse of Lehman Brothers in September 2008 caught markets and regulators by surprise. Although the government rushed to rescue other financial institutions from a similar fate after Lehman, it could not prevent the deepest recession in postwar history. **A Crisis of Beliefs** makes us rethink the financial crisis and the nature of economic risk. In this authoritative and comprehensive book, two of today's most insightful economists reveal how our beliefs shape financial markets, lead to expansions of credit and leverage, and expose the economy to major risks. Nicola Gennaioli and Andrei Shleifer carefully walk readers through the unraveling of Lehman Brothers and the ensuing meltdown of the US financial system, and then present new evidence to illustrate the destabilizing role played by the beliefs of home buyers, investors, and regulators. Using the latest research in psychology and behavioral economics, they present a new theory of belief formation that explains why the financial crisis came as such a shock to so many people--and how financial and economic instability persist. A must-read for anyone seeking insights into financial markets, **A Crisis of Beliefs** shows how even the smartest market participants and regulators did not fully appreciate the extent of economic risk, and offers a new

framework for understanding today's unpredictable financial waters.--

Twitter and Society Katrin Weller,2013 Since its launch in 2006, Twitter has evolved from a niche service to a mass phenomenon; it has become instrumental for everyday communication as well as for

political debates, crisis communication, marketing, and cultural participation. Teaching and Learning at a Distance Michael Simonson,Susan Zvacek,2024-01-01 Teaching and Learning at a Distance is written for introductory distance education courses for preservice or in-service teachers, and for training programs that discuss teaching distant learners or managing distance education systems. This text provides readers with the basic information needed to be knowledgeable distance educators and leaders of distance education programs. The teacher or trainer who uses this book will be able to design courses, evaluate programs, and identify issues and trends affecting the field. In this text we take

the following themes: The first theme is the definition of distance education. Before we started writing the first edition of *Teaching and Learning at a Distance* we carefully reviewed the literature to determine the definition that would be at the foundation of our writing. This definition is based on the work of Desmond Keegan, but is unique to this book and has been adopted by the Association for Educational Communications and Technology and by the *Encyclopedia Britannica*. The second theme of the book is the importance of research to the development of effective courses and programs offered at a distance. The best practices presented in *Teaching and Learning at a Distance* are validated by scientific evidence. Certainly there are “rules of thumb,” but we have always attempted to only include recommendations that can be supported by research. The third theme of *Teaching and Learning at a Distance* is derived from Richard Clark’s famous quote published in the *Review of Educational Research* asserting that media are mere vehicles that do not directly influence achievement. Clark’s controversial work is discussed in the book, but is also fundamental to the book’s advocacy for distance education—in other words, we authors do not make the claim that education delivered at a distance is inherently better than other ways people learn. Distance delivered instruction is not a magical approach that makes learners achieve more. Equivalency theory is the fourth theme of the book. Here we present the concept that instruction should be provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment. Equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face-to-face classroom. The final theme for *Teaching and Learning at a Distance* is the idea that the book should be comprehensive—that it should

cover as much of the various ways instruction is made available to distant learners as is possible. It can serve as a stand-alone source of information.

Public Libraries and the Internet John Carlo Bertot Ph.D., Charles R. McClure, Paul T. Jaeger, 2010-11-11
This book is a timely and detailed exploration of the impact and issues of the Internet in public libraries and

their implications for society, policy, and professional practice. *Public Libraries and the Internet: Roles, Perspectives, and Implications* explores the impact of the Internet and the expansion of the networked environment on U.S. public libraries through more than a dozen essays written by leading scholars and administrators. Notwithstanding the far-reaching changes wrought by the Internet, this is the first attempt to provide a comprehensive exploration of the subject over time and across areas of practice. This wide-ranging volume, edited by the authors of several national studies tracking the use and involvement of public libraries with the Internet since 1994, offers both description and assessment. It discusses the ways in which the roles and services of public libraries have changed as a result of the Internet and offers a perspective on the meaning and impact of these changes. Perhaps most critically, it also suggests possible futures and opportunities as public libraries continue to evolve in this networked environment.

Web Dragons Ian H. Witten, Marco Gori, Teresa Numerico, 2010-07-27 *Web Dragons* offers a perspective on the world of Web search and the effects of search engines and information availability on the present and future world. In the blink of an eye since the turn of the millennium, the lives of people who work with information have been utterly transformed. Everything we need to know is on the web. It's where we learn and play, shop and do business, keep up with old friends and meet new ones. Search engines make it possible for us to find the stuff we need to know. Search engines — web dragons — are the portals through which we access society's treasure trove of information. How do they stack up against librarians, the gatekeepers over centuries past? What role will libraries play in a world whose information is ruled by the web? How is the web organized? Who controls its contents, and how do they do it? How do search

engines work? How can web visibility be exploited by those who want to sell us their wares? What's coming tomorrow, and can we influence it? As we witness the dawn of a new era, this book shows readers what it will look like and how it will change their world. Whoever you are: if you care about information, this book will open your eyes and make you blink. Presents a critical view of the idea of funneling information access through a small handful of gateways and the notion of a centralized index--and the problems that may cause Provides promising approaches for addressing the problems, such as the personalization of web services Presented by authorities in the field of digital libraries, web history, machine learning, and web and data mining Find more information at the author's site: webdragons.net
