Launch! Advertising and Promotion in Real Time Michael Solomon, 2009 Launch! Advertising and Promotion is written for advertising and promotion courses taught to students in the business school and journalism & mass communication students. This textbook is the first of its kind to teach advertising concepts by reverse engineering a real advertising campaign from beginning to end. In April 2007, SS+K, an innovative New York City communications agency, launched the first ever branding campaign for msnbc.com with the tag A Fuller Spectrum of News. Launch! follows that campaign from initial agency pitch through roll-out of print and media assets to post-campaign analysis. Throughout, it exposes readers to the theory and concepts of advertising and promotion, and the personalities and decisions that drove this campaign. The book takes a rare look behind the curtain - even letting you see some of the paths not chosen by the agency and client. Students get a realistic sense of how theory plays out in practice, and get a flavor for the exciting field of advertising and promotion. And, they consistently learn the perspectives of both the advertising agency (where many journalism and communications students will work) and the client (where many marketing majors will work). This is a unique book, with a unique perspective, by a unique author team, and you won't find this kind of insight in any other text on the market. We think you're going to love it! This textbook has been used in classes at: Ball State University, Emerson College, Florida Institute of Technology, Grand Valley State University, Johnson County Community College, Manchester Business School, McLennan Community College, Michigan State University, North Hennepin Community College, Pierce College, Rochester Institute of Technology, Saint Louis University, Salem State College, South Dakota State University, Texas State University, Texas Tech University, University of New Hampshire, University of North Carolina, University of Notre Dame, University of South Florida,

Virginia Tech, Western Kentucky University.

The Social Semantic Web John G Breslin,Alexandre Passant,Stefan Decker,2009-10-03 The Social Web (including services such as MySpace, Flickr, last.fm, and WordPress) has captured the attention of millions of users as well as billions of dollars in investment and acquisition. Social websites, evolving around the connections between people and their objects of interest, are encountering boundaries in the areas of information integration, dissemination, reuse, portability, searchability, automation and demanding tasks like querying. The Semantic Web is an ideal platform for interlinking and performing operations on diverse person- and object-related data available from the Social Web, and has produced a variety of approaches to overcome the boundaries being experienced in Social Web application areas. After a short overview of both the Social Web and the Semantic Web, Breslin et al. describe some popular social media and social networking applications, list their strengths and limitations, and describe some applications of Semantic Web technology to address their current shortcomings by enhancing them with semantics. Across these social websites, they demonstrate a twofold approach for interconnecting the islands that are social websites with semantic technologies, and for powering semantic applications with rich community-created content. They conclude with observations on how the application of Semantic Web technologies to the Social Web is leading towards the Social Semantic Web (sometimes also called Web 3.0), forming a network of interlinked and semantically-rich content and knowledge. The book is intended for computer science professionals, researchers, and graduates interested in understanding the technologies and research issues involved in applying Semantic Web technologies to social software. Practitioners and developers interested in applications such as blogs, social networks or wikis will also learn about methods for increasing the levels of automation in these forms of Web

communication.

Online Social Networking on Campus Ana M. Martínez-Alemán, Katherine Lynk Wartman, 2008-02 In the era of such online spaces as Facebook, Instant Messenger, Live Journal, Blogger, Web Shots, and campus blogs, college students are using these resources and other online sites as a social medium. Inevitably, this medium presents students with ethical decisions about social propriety, self disclosure and acceptable behaviour. Because online social networking sites have proven problematic for college students and for college administrators, this book aims to offer professional guidance to Higher Education administrators and policy makers. Online Social Networking on Campus: Understanding what matters in student culture is a professional guide for Higher Education faculty and Student Affairs administrators, which rigorously examines college students' use of online social networking sites and how they use these to develop relationships both on and off campus. Most importantly, Online Social Networking on Campus investigates how college students use online sites to explore and makes sense of their identities. Providing information taken from interviews, surveys and focus group data, the book presents an ethnographic view of

social networking that will help Student Affairs administrators, Information Technology administrators, and faculty better understand and provide guidance to the neomillennials on their campuses.

On his side, he's got a few shambling corpses, an inept thief, and a powerful death wish. But he's up against tough odds: angry mobs of adventurers, a body falling apart at the seams — and a team of programmers racing a deadline to hammer out the last few bugs in their AI. *Mogworld is the debut novel from video-game icon Yahtzee Croshaw (Zero Punctuation)! Throwing Sheep in the Boardroom Matthew Fraser, Soumitra Dutta, 2010-02-16 If you want to understand why Wikipedia is changing the world, this book is a must read. -Jimmy Wales, Founder, Wikipedia This book is a must read for all - social activists, politicians or managers - who have an interest in understanding how our society is morphing. -Professor C.K. Prahalad, #1 Management Guru and author of *Competing for the Future* Synopsis The rise of social networks like Facebook, MySpace and Bebo is changing the way we see ourselves, how we interact with each other, how we work and how we do business

on a daily basis. *Throwing Sheep in the Boardroom* explores the powerful forces driving the social networking revolution, the impact of these profound changes, and the far reaching consequences of social networking. Detailing the way social networks affects both individuals and societies as a whole, the book offers a detailed focus on the ways social networking affects the world of business and work. The generation entering the workforce today - and entering boardrooms everywhere - is fully engaged with social networking and its uses. Rather than feeling threatened and paranoid, today's business leaders need to understand this phenomenon, accept that it won't go away, and embrace its power in the world of business. Excerpts from *Throwing Sheep in the Boardroom: Your next CEO's most impressive job credential might be status as an online gladiator, honing valuable leadership skills mercilessly slaying mortal enemies on World of Warcraft. Why not, the skills necessary to hack your way to the top levels of virtual games - especially a killer instinct - are excellent pre-requisites for managing complex organisations. Many senior managers mistakenly believe Enterprise 2.0 is a product, like the latest Microsoft office suite. They don't realise that Enterprise 2.0 is not a cost centre, but a "state of mind" - a revolutionary new way of managing companies and conducting business. Web 2.0 tools have no regard for "organisational boundaries, hierarchies, or job titles". Try telling a senior executive that, henceforth, there will be no job titles, reporting lines, and organisational boundaries in the company - and watch the reaction closely. When someone calls a meeting, he or she is asserting authority over those who are invited to attend. Meetings are exclusive and closed. In most corporations, who gets invited to a meeting - and who does not - sends a signal about who's 'in the loop'. Meetings are a form of social grooming inside organisations. Meetings impose vertical authority. They establish status hierarchies. The Enterprise 2.0 model is feared in corporations because it threatens status hierarchies. Harnessing*

the dynamism of horizontal networks, Web 2.0 social media are bypassing institutional forms of social organisation and directly empowering people. This book has attempted to tell that story with illustrations, which, we hope, have offered intriguing and instructive insights into the powerful transformations we described. What has interested us most, indeed, is the transformative impact – or “e-ruptions” – of Web 2.0 social media on the three dynamics that gave this book its structure: identity, status and power.
